

# SR TRACE®

## SELF-REGULATING, PRE-TERMINATED CABLE

SR Trace® is a self-regulating heating cable that automatically varies its heat output with changes in surrounding temperature. Normally installed in commercial applications, SR Trace helps provide maximum freeze protection for pipes and vessels in ambient temperatures down to -40°F/-40°C. Use SR Trace cables to prevent water pipes from freezing, to maintain liquids in pipes at a constant temperature in order to prevent degradation of the liquid, or to maintain viscosity for flow conditions. SR Trace can be installed in dry or wet environments. Available in power densities of 3, 5, and 8 watts per foot at 50°F/10°C, for both 120 Vac and 240 Vac applications. 240 Vac can be used for 208 Vac or 277 Vac applications. SR Trace cables are UL Listed to US and Canadian Safety Standards and CSA Certified. See item specific certifications below.
