MICROSTROBES® - AC Models

For general purpose visible signals the versatile MICROSTROBE® does it all. Choose from several mounting styles - even a medium base light bulb socket model. The most recent models have been upgraded to polyurethane potted power supplies with screw-on Lexan lenses, creating a 100% water-tight Type 4X enclosure.

Application Note for 120 VAC Units

120 VAC units that are going to be switched on-off with a solid state relay should be ordered with option **/TRIAC-SW** to prevent false operation from snubber leakage current.

SYNCHRONIZING SPECIFICATIONS

SYNCHRONIZING CIRCUIT CONNECTION: This is a low voltage, low power customer connection which requires one 22 ga twisted pair run between each light. Max length between furthest lights is 3000 feet. Up to 100 lights of different voltages can be synchronized.

SYNCHRONIZING CIRCUIT FEATURES: Each light contains its own flash rate timing circuit which operates the lamp automatically and a bi-directional synchronizing circuit which overrides the internal timing circuit when connected to another light.

When two or more lamps are synchronized together, failure of any lamp will not prevent other lamps from operating.

Lights may be operated from different power sources, that is a 120 VAC unit may be synchronized with a 12 VDC unit.

Tomar introduces a totally new LED warning Light. The MicroLert offers unique features not before seen in industrial signalling devices. It is the first such light designed from the ground up to take advantage of LED lighting technology.

MicroLert features an integral inverted cone design to provide full 360 degree coverage. The MicroLert lens is engineered for maximum light output and color clarity, and allows more of the LED light to be projected out than do conventional Fresnel lenses.

The tough Lexan Lens is spun welded to the base to completely seal out moisture. The MicroLert is UL listed and manufactured to NEMA 4X specification. It is available in five LED colors (amber, blue, green, red and white; and in steady burn and flashing models.

The MicroLert will operate over wide AC and DC input Voltage ranges. The DC version is designed to operate from 10-100 VDC and 16-36 VAC; the AC version from 85-265 VAC. The MicroLert is guaranteed against factory defects for a full 5 years.

MICROLERT STATUS LED LIGHTS

Using the versatile MicroLert LED warning lights, it's possible to assemble a Status Light Assembly suitable for a wide variety of status monitoring applications.

A typical application is the living quarters of an Oil Platform with a MicroLert LED Status Light installed to monitor gas detection equipment. One assembly does it all from a flashing red light to a steady burn green light with other colors in between either flashing or steady burning depending on the conditions monitored.

The MicroLert LED Status Light is actually an "A-La-Carte" monitoring assembly with which the user specifies the model

number and location of each MicroLert mounted on the NEMA 3R box from two to five lights. For example if a three light assembly is needed, first select the NEMA 3R box, then the LED MicroLert Lights from left to right and Maxi-Signal will assemble them as specified.

REPLACEMENT STROBE LAMPS

by Tomar Electronics

Strobe lamps are high-intensity light sources which use glass and quartz tubing filled with xenon gas to efficiently convert 20 to 50% of the applied electrical energy into optical energy. Similarly, an incandescent light converts only 1 to 3% of the electrical energy into optical energy. An important feature of the xenon strobe lamp is its ability to produce a high peak blue-white light output of short duration. All TOMAR strobe lamps have a trigger coil potted into their assemblies except the low cost model 2001, 5001 and 5002 lamps.

For general purpose visible signals the versatile MICROSTROBE® does it all. Choose from several mounting styles - even a medium base light bulb socket model. The most recent models have been upgraded to polyurethane potted power supplies with screw-on Lexan lenses, creating a 100% water-tight Type 4X enclosure.

Application Note for 120 VAC Units

120 VAC units that are going to be switched on-off with a solid state relay should be ordered with option **/TRIAC-SW** to prevent false operation from snubber leakage current.

SYNCHRONIZING SPECIFICATIONS

SYNCHRONIZING CIRCUIT CONNECTION: This is a low voltage, low power customer connection which requires one 22 ga twisted pair run between each light. Max length between furthest lights is 3000 feet. Up to 100 lights of different voltages can be synchronized.

SYNCHRONIZING CIRCUIT FEATURES: Each light contains its own flash rate timing circuit which operates the lamp automatically and a bi-directional synchronizing circuit which overrides the internal timing circuit when connected to another light.

When two or more lamps are synchronized together, failure of any lamp will not prevent other lamps from operating.

Lights may be operated from different power sources, that is a 120 VAC unit may be synchronized with a 12 VDC unit.

Tomar introduces a totally new LED warning Light. The MicroLert offers unique features not before seen in industrial signalling devices. It is the first such light designed from the ground up to take advantage of LED lighting technology.

MicroLert features an integral inverted cone design to provide full 360 degree coverage. The MicroLert lens is engineered for maximum light output and color clarity, and allows more of the LED light to be projected out than do conventional Fresnel lenses.

The tough Lexan Lens is spun welded to the base to completely seal out moisture. The MicroLert is UL listed and manufactured to NEMA 4X specification. It is available in five LED colors (amber, blue, green, red and white; and in steady burn and flashing models.

The MicroLert will operate over wide AC and DC input Voltage ranges. The DC version is designed to operate from 10-100 VDC and 16-36 VAC; the AC version from 85-265 VAC. The MicroLert is guaranteed against factory defects for a full 5 years.

MICROLERT STATUS LED LIGHTS

Using the versatile MicroLert LED warning lights, it's possible to assemble a Status Light Assembly suitable for a wide variety of status monitoring applications.

A typical application is the living quarters of an Oil Platform with a MicroLert LED Status Light installed to monitor gas detection equipment. One assembly does it all from a flashing red light to a steady burn green light with other colors in between either flashing or steady burning depending on the conditions monitored.

The MicroLert LED Status Light is actually an "A-La-Carte" monitoring assembly with which the user specifies the model

number and location of each MicroLert mounted on the NEMA 3R box from two to five lights. For example if a three light assembly is needed, first select the NEMA 3R box, then the LED MicroLert Lights from left to right and Maxi-Signal will assemble them as specified.

REPLACEMENT STROBE LAMPS

by Tomar Electronics

Strobe lamps are high-intensity light sources which use glass and quartz tubing filled with xenon gas to efficiently convert 20 to 50% of the applied electrical energy into optical energy. Similarly, an incandescent light converts only 1 to 3% of the electrical energy into optical energy. An important feature of the xenon strobe lamp is its ability to produce a high peak blue-white light output of short duration. All TOMAR strobe lamps have a trigger coil potted into their assemblies except the low cost model 2001, 5001 and 5002 lamps.
