

**Miniature Circuit Breakers**

**Selection Guide** ..... 2

**QUICKLAG® Industrial Circuit Breakers**

Circuit Breakers, Plug-on Types HQP, QPHW, QHPX, QHPW ..... 5

Ground Fault Circuit Breakers, Plug-on Types QPGF, QPHGF ..... 6

Ground Fault Equipment Protectors, Plug-on Types QPGFEP, QPHGFEP ..... 6

Circuit Breakers, Bolt-on Types BA, QBHW, HBAX, HBAW ..... 7

Ground Fault Circuit Breakers, Bolt-on Types QBGF, QBHGF ..... 8

Ground Fault Equipment Protectors, Bolt-on Types QBGFEP, QBHGFEP ..... 8

Circuit Breakers, Cable-in/Cable-out

1-Inch per Pole Types QC, QCHW, QHCX, QHCW ... 9

1/2-Inch per Pole Types QCR, QCF, QCRH, QCFH ... 10

Ground Fault Circuit Breakers, Cable-in/Cable-out Types QCGF, QCHGF ..... 13

Ground Fault Equipment Protectors, Cable-in/Cable-out Types QPGFEP, QCHGFEP ..... 13

Solenoid-operated, Remote-controlled Types GHBS, GBHS ..... 14

International Rated Circuit Breakers ..... 16

Special Application Breakers ..... 17

Accessories ..... 18

Factory Modifications, Factory Installed Terminals ... 19

**Supplementary Protectors**

Type SPCL Current Limiting ..... 20

Type SPHM Hydraulic Magnetic ..... 23

**Molded Case Circuit Breakers**

**Selection Guide** ..... 3

**Series C Circuit Breakers**

G-Frame ..... 25

F-Frame ..... 31

J-Frame ..... 37

K-Frame ..... 43

Circuit Breaker Type Codes: P Plug-in; B Bolt-on; C Cable-in/Cable-out; GF Ground Fault, 5 ma; GFEP Ground Fault, 30 ma.

For Types SPCL and SPHM Supplementary Protectors, see pages 20 and 23.

For Types GHBS and GBHS Solenoid-operated, Remote-controlled Circuit Breakers, see page 14.

① QUICKLAG circuit breakers are suitable for application in relative humidity 0-95% non-condensating.

② Two-pole dc interrupting ratings based on 2 poles connected in series.

③ 62.5 Vac interrupting rating is 3800 AIC 10-50 amperes and 2500 AIC 55-100 amperes continuous.

① N.I.T. is non-interchangeable trip unit and I.T. is interchangeable trip unit.

② Two-pole circuit breaker, or two poles of three-pole circuit breaker at 250 Vdc.

③ Not defined in W-C-375b.

QUICKLAG Industrial Circuit Breakers Plug-on

Description

Built and Listed to UL 489

QUICKLAG Circuit Breakers  
Plug-on Type

- Type HQP: 10-150 Amperes, 10,000 AIC
- Type QPHW: 15-125 Amperes, 22,000 AIC
- Type QHPX: 15-100 Amperes, 42,000 AIC
- Type QHPW: 15-30 Amperes, 65,000 AIC

QUICKLAG Type HQP 1-Pole

QUICKLAG Type HQP 2-Pole

QUICKLAG Type HQP 3-Pole

① All products UL and CSA listed.  
 ② All products 15-100A are HACR rated.  
 ③ Switching duty rated for 120 Vac fluorescent light applications.  
 ④ For special low-magnetic breaker order HQP1015L1 or HQP1020L1

**QUICKLAG Industrial Ground Fault Circuit Breakers and Equipment Protectors Plug-on**

## Description

### Plug-on Type

Built and Listed to UL 489

### QUICKLAG Ground Fault Circuit Breakers, Class A GFCI

Built and Tested to UL 943

### 5mA Trip Sensitivity

Type QPGF: 15-50 Amperes,  
10,000 AIC

Type QPHGF: 15-30 Amperes,  
22,000 AIC

### QUICKLAG Ground Fault Equipment Protectors

Built and Listed to UL 1053

### 30mA Trip Sensitivity

Type QPGFEP: 15-50 Amperes,  
10,000 AIC

Type QPHGFEP: 15-30 Amperes,  
22,000 AIC

QUICKLAG Type QPGF 1-Pole Ground Fault Circuit Breaker

QUICKLAG Type QPGF 2-Pole Ground Fault Circuit Breaker

### Shipping Data

Shipped individually or in carton quantities.

Poles	Carton Quantity	Approximate Weight Lbs. (Kgs)	Dimensions Inches (mm)
1	20	11.000 (4.99)	12.500 (317.50) x 6.500 (165.10) x 5.000 (127.00)
2	5	5.000 (2.29)	15.500 (393.70) x 6.000 (152.40) x 4.500 (114.30)

## QUICKLAG Industrial Circuit Breakers Cable-in/Cable-out (1/2 inch per pole)

### Description

#### Built and Listed to UL 489

Type QCR and QCF Circuit Breakers are UL listed Circuit Breakers that are suitable for use as branch circuit protectors.

### Applications

QCR and QCF Circuit Breakers are only 1/2-inch wide per pole and are excellent for general purpose industrial applications where space savings is required.

### Product Features and Ratings

- 1/2-inch wide per pole
- Cable-in/Cable-out
- Black cases with black handles
- Three position handle: ON, Tripped (center), OFF
- Thermal-Magnetic Protection
- UL File E7819
- CSA File LR48907
- One, two and three pole
- 10 kAIC at 120/240 Vac, 10-60 Amperes
- 22 kAIC at 120/240 Vac, 15-20 Amperes
- 10 kAIC at 240 Vac, 10-30 Amperes
- 3 kAIC at 62.5 Vdc (1 Pole)
- 3 kAIC at 130 Vdc (2 Poles in Series)
- Normal Operating Environment:  
0-40°C  
5-95% Humidity  
(Non-Condensating)

### Additional Ratings

In addition to the ratings shown for the 1/2-inch wide QCR and QCF, the complete QC breaker line includes:

- 1-4 Poles
- 5-100 Amperes
- 10 through 65 kAIC
- 120/240 and 240 Vac
- 1-inch per pole

1-Pole      2-Pole  
QCR (Rear-Mounted Breakers)

1-Pole      2-Pole  
QCF (Front-Mounted Breakers)

3-Pole  
QCR (Rear-Mounted Breakers)

3-Pole  
QCF (Front-Mounted Breakers)

Type QCR have as a standard feature provisions for 35mm DIN-Rail rear mounting with a spring-loaded rear mounting. Optional clips for individual mounting are available as a separate accessory.

Type QCF have two threaded steel inserts to facilitate front mounting with #6-32 steel screws. The clamp type terminals accessible from the rear of the breaker so that cables can be accessed without removal of the breaker from the front cover.

QCR 1-Pole Breaker with QCRMTGFT  
Clips (Qty. 2) Individually Mounted

QCF Breaker Front Panel Mounted

Available QCR and QCF Breaker Accessories

Catalog Number	Description
QCRMTGFT	Steel mounting clip mounts QCR breaker if individual mounting is required. Quantity two required for 1- and 2-pole and four required for 3-pole breakers.
QCRFPL1P	Removable padlock device for single-pole QCR or QCF breaker.
QCRFPLMP	Removable padlock device for multi-pole QCR or QCF breaker.
QCRFLOFF	Padlock bracket assembly for QCR or QCF single or multi-pole breakers (off only).

① Standard breaker terminals are box type lugs.  
② Breakers with "T" Catalog Number Suffix are suitable for line and load side ring terminal connection (#10-32 plus/minus terminal screw provided).

③ Breakers with "P" Catalog Number Suffix are suitable for terminating 2 #10 AWG Quick-Connect Type Terminals per phase on breaker load side.  
④ Breakers with Shunt Trip Attachment (extra pole required on breaker right-hand side) are available. Contact Cutler-Hammer.  
⑤ All ratings 15 to 60 amperes are HACR rated.

⑥ Breakers with "H" Catalog Suffix have 240 Vac construction.  
⑦ All 15 and 20 ampere single-pole breakers are SWD (Switching Duty) rated for fluorescent lighting applications.  
⑧ 60/75°C Cu/Al wire on all ratings except 60 amperes which requires Cu only conductor.

QUICKLAG Industrial Circuit Breakers Cable-in/Cable-out (1/2 inch per pole)

QCR and QCF Breaker Factory Installed Terminals

**QCR and QCF Standard Box Terminals**

Factory installed line and load side breaker terminal to accommodate #14 AWG to #4 AWG wire.

**QCR Quick-Connect Terminals**

Factory installed two-prong quick-connect terminal on breaker load side suitable for terminating two #10 AWG wire with insulated slip-on terminals as shown. Line side terminal is the standard type.

Catalog Suffix "P"

**QCR and QCF Ring or Spade Lug Terminals**

(10 to 30 ampere ratings only): Factory installed line and load side terminals each equipped with a #10-32 screw suitable for terminating one #10 AWG wire with insulated ring or spade type terminal as shown.

Catalog Suffix "T"

## Types GHBS and GBHS Solenoid-Operated, Remote-Controlled

### Description

GHBS and GBHS circuit breakers are bolt-on branch circuit breakers designed for use in panelboards and are ideally suited for lighting control applications. In addition to providing conventional branch circuit protection, they include a unique solenoid-operated mechanism that provides for efficient breaker pulse-on and pulse-off operation when used with a suitable controller like the Cutler-Hammer Pow-R-Command lighting control system.

### Product Features

- Bolt-on Line-Side Terminal
- Cable Connected Load-Side Terminal
- 3-Prong Control Terminal (Common, Solenoid, Auxiliary Switch)
- Bi-Metal Assembly for Thermal Overload Protection
- Fast Acting Short Circuit Protection
- Arc-Runner and Arc-Chute Assembly for Fast Acting Arc Extinction
- Three Position Handle: OFF, TRIP (Center), ON
- Handle in "ON" Position Enables Remote Control
- Handle in "OFF" Position Disables Remote Control
- Handle Permits Manual Switching When Control Power is Lost
- Mechanical Trip Indicator Window (Red-ON, Green-OFF/TRIPPED)
- 15 and 20 Ampere Breakers SWD (Switching Duty) Rated
- HID Ratings for HID (High Intensity Discharge) Lighting
- Auxiliary Switch for Control Circuit Feedback

1-Pole

2-Pole

### GHBS UL 489 Interrupting Ratings

Circuit Breaker Type <sup>①</sup>	Number of Poles	Interrupting Capacity (Symmetrical Amperes) Rating Amperes <sup>②</sup>	Volts Ac (50/60 Hz)		
			120	240	277/480
			GHBS1015D GHBS1020D GHBS1030D	1	15 20 30

Instruction Leaflet/FRED Number 15546

### GBHS CSA 22.2 Interrupting Ratings

Circuit Breaker Type	Number of Poles	Interrupting Capacity (Symmetrical Amperes) Rating Amperes <sup>②</sup>	Volts Ac (50/60 Hz)	
			347/600	
			GBHS1015D GBHS1020D	1
GBHS2015D GBHS2020D	2	15 20	10,000 10,000	

15-20 Amperes

30 Amperes

### Terminal Type

For load-side. Terminals are UL listed as suitable for wire type and size given below.

Circuit Breaker Amperes	Terminal Type	Screw Head Type	Wire Type	AWG Wire Range
15-20	Clamp	Slotted	Cu/Al	#14-#10
30	Box	Slotted	Cu/Al	#14-#2

### Dimensions Per Pole, Inches (mm)

Width	Height	Depth
1.000 (25.40)	4.125 (104.78)	2.810 (71.37)

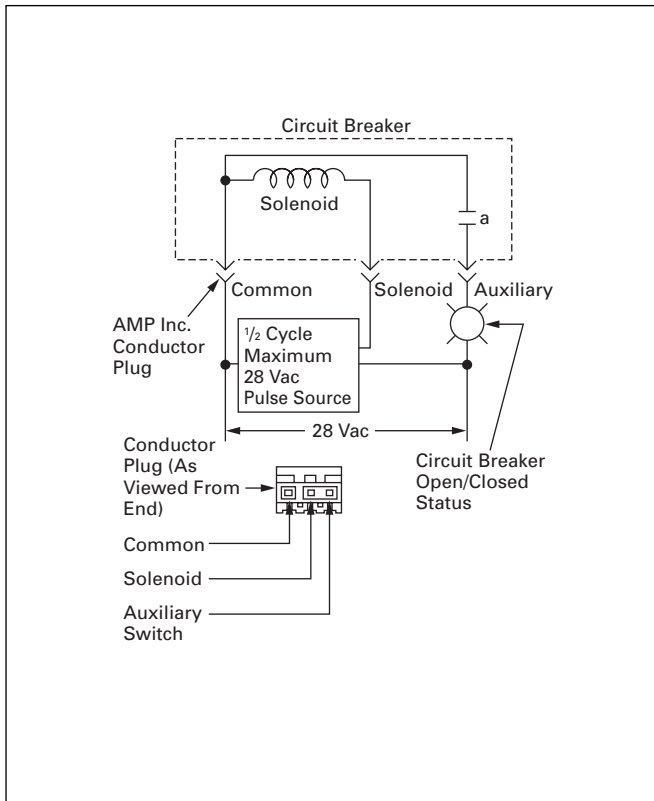

Dimensions in parentheses in millimeters.

① All UL listed circuit breakers are HID (High Intensity Discharge) rated.

② Continuous current rating at 40°C.

Wiring Diagrams

Typical Single-Pole Circuit Breaker Schematic Diagram and Conductor Plug Wiring Connections

Circuit Breaker Schematic Diagram and Conductor Plug Wiring Connections for 2-Pole

Remote Control Operation

The remote-control capability of the breaker is "armed" when the breaker handle is manually switched to the "ON" position. Once armed, the breaker can be pulsed "ON" and "OFF" by a controller device which provides an ac pulse of specified magnitude and duration to the solenoid operated mechanism. Control connections to the breaker are provided through a male conductor plug (supplied by others) which

snaps into the female connector provided with the breaker. A normally open (a) auxiliary contact provides for breaker "ON"/"OFF" status indication to the remote controller and/or indicating lamp. The remote-control capability of the breaker is "disarmed" when the breaker handle is in the "OFF" or "TRIPPED" position. In the event the breaker automatically trips, the breaker must be reset manually.

Breaker Solenoid and Operating Data

- Ambient Temperature: 0-40° C
- Nominal Pulse Magnitude: 28 volts ac RMS
- Tolerance: +10% to -15% of Nominal Voltage
- Pulse Duration: 1/2 cycle (8-10 ms)
- Minimum Recommended Pulse Current at Nominal Voltage:
  - 1-Pole: 4.9 Amperes Peak, 3.5 Amperes RMS
  - 2-Pole: 7.84 Amperes Peak, 5.6 Amperes RMS
- Breaker Operating Time: 20-40 ms
- Maximum Breaker Cycling: 6 Operations per Minute
- Humidity: 0-95% non-Condensing

**Description**

**QUICKLAG Switching Neutral Circuit Breakers**

Plug-on Type HQP: 10-30 Amperes, 1 and 2 Poles, 10,000 AIC  
 Bolt-on Type BA: 10-30 Amperes, 1 and 2 Poles, 10,000 AIC  
 Cable-in Type QC: 10-30 Amperes, 1 and 2 Poles, 10,000 AIC

Switching Neutral QUICKLAG Breakers available in one- and two-pole configurations, plus neutral pole for applications in accordance with NEC 514-5, 240-22, and 380-2. A one-pole device takes two pole spaces, and a two-pole device takes three pole spaces.

QUICKLAG Type P Switching Neutral

**QUICKLAG HID (High Intensity Discharge) Breakers**

Plug-on Type HQP: 15-60 Amperes, 1 and 2 Poles, 10,000 AIC  
 Bolt-on Type BA: 15-60 Amperes, 1 and 2 Poles, 10,000 AIC  
 Cable-in Type QC: 15-60 Amperes, 1 and 2 Poles, 10,000 AIC

Breakers designed specifically for use with high intensity discharge (HID) lighting applications. (UL listed as standard lighting breakers.)

**Molded Case Switches Non-Automatic QUICKLAG Molded Case Switch**

Plug-on Type HQP: 50, 60, 100 Amperes, 1, 2 and 3 Poles  
 Bolt-on Type BA: 50, 60, 100 Amperes, 1, 2 and 3 Poles  
 Cable-in Type QC: 50, 60, 100 Amperes, 1, 2 and 3 Poles

## Supplementary Protectors Current Limiting Type Cable-in/Cable-out DIN Rail

### Description

#### UL 1077 Supplementary Protectors

Type SPCL Supplementary Protectors are IEC circuit breakers that are recognized by UL under UL 1077. They are intended for use as over-current protection within an appliance or electrical equipment where branch circuit protection (for example a UL listed Molded Case Circuit Breaker) has already been provided or is not required.

#### Equipment and Control Circuit Protection

These protectors are ideal for replacing fuses in control circuits. Applications include protecting motor control circuits, small control circuit transformers, relays, contactor coils, power supplies, PLC I/O points, appliances, and electronic equipment.

### Product Features

The Type SPCL Supplementary Protectors are provided in light gray cases with charcoal gray handles.

**DIN-Rail Mounting:** A quick snap-on clip design allows easy installation on 35mm DIN Rail.

**Current-Limiting Design:** Fast short circuit interruption reduces let-through energy, reducing damage to the circuit.

#### Thermal-Magnetic Overcurrent

**Protection:** Types B and C overcurrent curves provide maximum reliability and accuracy. Type B protection is normally used for low inrush applications. Type C protection is used for general purpose industrial applications that require higher inrush tolerance.

**Center Trip Position:** The breaker handle has a unique center trip "Reset" position that indicates an overcurrent trip. "Off" (O) and "On" (I) handle positions are visually indicated by red and green flags.

### CE Mark

SPCL protectors carry the CE mark in accordance with Low Voltage Directive (LVD) (73/23/EEC)

**SPCL Accessories**

**Auxiliary/Signal Switch Kit**

Catalog Number SPCLUAUX is a field mountable switch kit that attaches to the left side of a SPCL Protector. It is field selectable to auxiliary or signal (bell alarm) configuration. The switch is UL and CSA approved for general purpose ratings of 6 ampere at 240 Vac or 1 ampere at 125 Vdc. Contacts are provided as indicated on the wiring diagram. Screw-type terminals are provided to accommodate up to #16 AWG wire. Recommended torque is approximately 13 inch-pounds.

**Contact Charts**

**Description**

**UL 1077 Supplementary Protectors**  
Type SPHM Supplementary Protectors are IEC circuit breakers that are recognized by UL under UL 1077. They are intended for use as over-current protection within an appliance or electrical equipment where branch circuit protection (for example a UL listed Molded Case Circuit Breaker) has already been provided or is not required.

**Equipment and Control Circuit Applications**

These protectors are ideal for protecting motor control circuits, CPTs, relays, contactor coils, power supplies, PLC I/O points, lighting circuits, appliances, electronic equipment, and replacing fuses.

**Product Features**

The Type SPHM Supplementary Protectors are provided in light gray cases with charcoal gray handles. Handles are marked with "O" for "Off" and "I" for "On".

**DIN Rail Mounting:** Easy installation on 35mm DIN Rail. A spring loaded clip is provided for quick release from the DIN Rail mounting.

**Heat-Induced Nuisance Tripping Eliminated:** The protector is designed to "hold in" at 100% of continuous rated current regardless of ambient temperatures from -40 to +85°C.

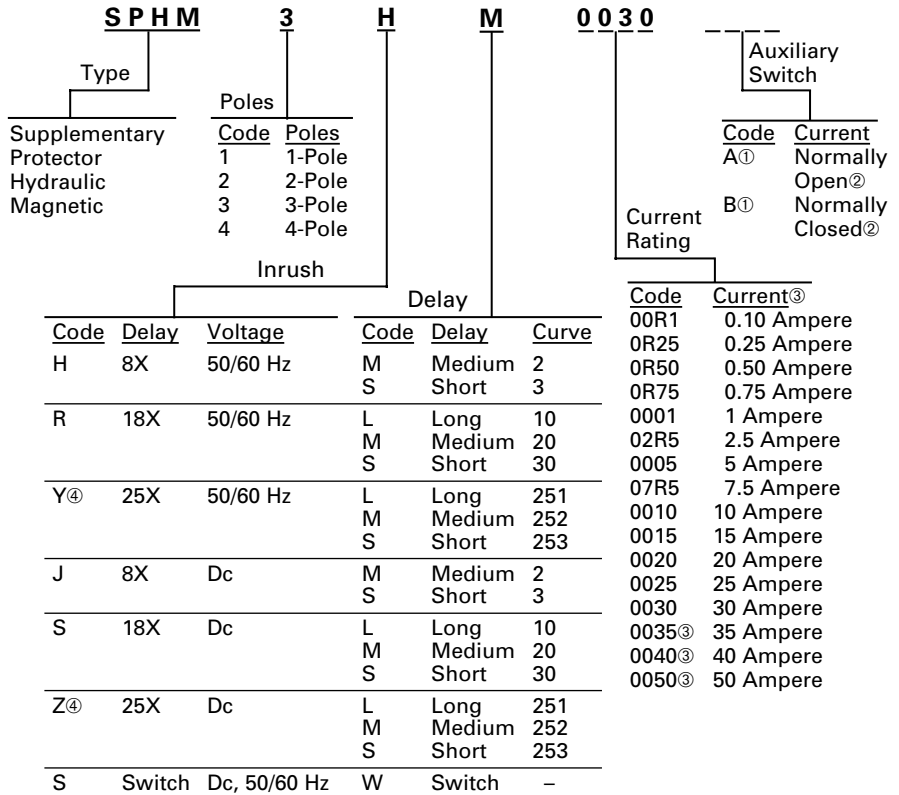

**Immediate Reset After Trip:** The protector can be reset (closed) immediately after an overcurrent trip without a "cooling off" period.

**Precise Overcurrent Calibration:** The protector can be precisely calibrated to a wide variety of current ranges from 0.1 to 50 amperes continuous. For special ratings not shown, contact Cutler-Hammer.

**Flexible Time-Characteristic Curves:** Long, Medium, and Short Delay Curves are available. Long Delay are for special extended inrush, Medium

① One A or B contact maximum per pole. Contacts will be arranged left to right (e.g.,) BAB suffix on 3-pole breaker.  
② Contact position when breaker in open condition. Contacts rated 10 amperes at 250 Vac.  
③ UL recognized to 250 Vac, 5 kA above 30 amperes.  
④ Maximum of 40 amperes available at 25X inrush.

**Catalog Numbering System**

**General Specifications and Electrical Ratings**

Standards and Approvals	Continuous Current Rating	Vac 50/60 Hz	Vdc	Interruption Cap Capacity RMS Symmetrical
UL 1077	0.1 to 30 Amperes	277/480		3 kA
	0.1 to 50 Amperes	250		5 kA
CSA 22.2	0.1 to 50 Amperes		80	5 kA
VDE 0660	0.1 to 50 Amperes	230/400		1.5 kA
IEC-380	0.1 to 50 Amperes		80	2 kA

for general purpose, and Short Delay for sensitive electronic applications.

**1/2 Cycle High-Inrush Tolerance:** The protector can be provided with tolerance to various levels of 1/2 cycle current spikes. General purpose tolerance is 8X the continuous current rating. Tolerance to 18X and 25X are also available.

**Environmental, Vibration, and Shock Resistance:** Mil-Spec qualification for fungus resistance, humidity, salt-spray resistance, and shock vibration resistance.

**Integral Auxiliary Switch (Optional):** One auxiliary switch contact (a or b) can be factory installed per protector pole. A separate pole for the contact is not required.

**Standards:** UL Recognized under UL 1077, CSA Certified to CSA 22.2. Meets the requirements of IEC-380, IEC-435, IEC-601, VDE 0660, VDE 601, VDE 0730, VDE 0750, VDE 0804, VDE 0806

**Inrush Tolerance:** 8X (Standard), 18X, or 25X

**Overcurrent Curves:** Long Delay, Medium Delay, or Short Delay

**Operating Temperature:** -40 to +85°C

**Wire Range:** Breaker Terminals: 14-6 AWG Copper, 35-inch-lbs torque  
Auxiliary Switch Terminals: 16 AWG Copper, 3.5-inch-lbs torque

**Auxiliary Switch:** 10 Amperes at 250 Vac

**Degree of Protection:** IP-20

Series C® G-Frame

- All two- and three-pole circuit breakers are of the common trip type. On all 3-phase Delta (240V) Grounded B phase applications, refer to Cutler-Hammer.
- Single-pole circuit breakers, 15 and 20 amperes. Switching duty rated (SWD) for fluorescent lighting applications.
- All G-frame circuit breakers are suitable for reverse feed use.
- HACR rated.

Interrupting Capacity Ratings

Catalog Numbering System

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

Circuit Breaker/Frame Catalog Number

Terminal Types

For line and load-side. Terminals are UL listed as suitable for wire type and size given below.

Circuit Breaker Amperes	Terminal Type Material	Screw Head Type	Wire Type	AWG Wire Range	Metric Wire <sup>④</sup> Range (mm <sup>2</sup> )
<b>Standard</b>					
15-20	Clamp (Plated Steel)	Slotted	Cu/Al	#14-10	2.5-4
25-100	Pressure (Aluminum Body)	Slotted	Cu/Al	#10-1/0	4-50
<b>Optional</b>					
15-50	Pressure (Steel Body)	Slotted	Cu	–	–

① Two poles of 3-pole circuit breaker.  
 ② Time constant is 8 milliseconds minimum.  
 ③ 15 through 70A breakers only.  
 ④ Not UL listed sizes.

Instruction Leaflet/FRED Number 29C101

**Series C® F-Frame**

**Line and Load Terminals**

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. Except as noted, terminals comply with Underwriters Laboratories, Inc., Standards UL486A and UL486B. Unless otherwise specified, F-frame circuit breakers

are factory equipped with load terminals only.

**Ordering Information**

F-frame circuit breakers and molded case switches have load terminals only as standard equipment. When standard line-end terminals (same as

standard load-end terminals) are required, add suffix L to the circuit breaker catalog number. When non-standard or optional line and/or load terminals are required, order by style number. Specify if factory installation is required.

**Line and Load Terminals**

Assemble wire clamp to bottom of conductor as shown.

Insert collar enclosing conductor as shown. Locate nut on top of conductor and tighten securely with screw and washer. Caution: Collar must surround conductor.

Insert collar enclosing conductor and center on extrusion on collar. Install clip with legs on top of conductor and snap end around bottom of collar.

Assemble collar on top of conductor as shown. Tighten securely with screw and washer.

Collar slides onto conductor and is held in position by a screw and lockwasher.

Assemble collar on top of conductor as shown. Tighten securely with screw and washer. Terminal shield must be used with this collar.

① Not for use with ED, EDH, EDC breakers.  
② Includes terminal shield kit. Adds approximately 3 inches to breaker height. Available for use on 3-pole breaker only.

### Catalog Numbering System

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

① Weights shown are for thermal magnetic trip units. 3-pole electronic trip units weigh 2.5 lbs. (1.134 kg).  
 ② 2-pole circuit breaker or two outside poles of 3-pole circuit breaker.  
 ③ Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds minimum at 22 kA.

Instruction Leaflet/FRED Number 29C104 for Breaker; 29C614 for Electronic Trip Unit

① Ampere rating is established by rating plug.  
 ② For Ac use only.  
 ③ 3-pole KES Trip Units are for use in 3-pole frames only.  
 ④ Individually packed.

⑤ 3TA400K and 4TA400K terminal kits contain one terminal for each pole and one terminal cover.  
 ⑥ Trip unit includes protected neutral pole. Use corresponding 3-pole trip unit if protected neutral pole is not required.

⑦ Fully rated neutral pole protection is standard. For 50% rated protection on neutral pole, add suffix E to 4-pole trip unit catalog number.

Molded Case Switches

Molded case switches are used as compact switches in applications requiring high current switching capabilities. Molded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Molded case switches are listed in accordance with Underwriters Laboratories, Inc., Standard UL 1087.

① Long delay  $I^4t$  response selection limits short delay time to flat response.

Series C® K-Frame

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories, Inc., Standards UL486A and UL486B

and CSA Standard C22.2 No. 65, or Electrical Bulletin 1165. Unless otherwise specified, K-frame circuit breaker line and load terminals are shipped separately for field installation.

Ordering Information

K-frame circuit breakers use Cu/Al terminals as standard. When optional copper or Cu/Al terminals are required, order by catalog number. Specify if factory installation is required.

Series C® L-Frame

Typical Series C L-Frame Circuit Breaker

- All Series C L-frame circuit breakers are HACR rated.
- L-frame circuit breakers are available as individual components (Frame, Trip Unit, Terminals), or factory assembled complete breakers. OPTIM circuit breakers are available as factory assembled only.
- L-frame circuit breakers with non-interchangeable trip units are suitable for reverse feed use.

Series C® L-Frame

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories, Inc., Standards UL486A and UL486B and CSA Standard C22.2 No. 65M. Unless otherwise specified, L-frame circuit breaker line and load terminals are shipped separately for field installation.

The wire connecting terminal is secured with two pan-head, slotted screws and lock washers which can be checked for the correct torque loading or retightened from the front of the circuit breaker before installation of the conductors. (Applies to all styles.) The circuit breaker line/load terminal conductors are positioned in the conducting holes in the wire connecting terminal

and are secured with recessed socket screws which are tightened to the correct torque loading from the front of the circuit breaker.

Ordering Information

L-frame circuit breakers use Cu/Al terminals as standard. When optional copper terminals are required, order by catalog number. Specify if factory installation is required.

① 2-pole breaker supplied in 3-pole frame. Current carrying parts omitted from center pole.

② Refer to Cutler-Hammer for appropriate neutral pole accessory combinations.

③ OPTIM models 750 and 1050 are factory sealed and do not have the right pole space available for accessories.

④ Shunt trip and UVR cannot be mounted in right poles on LES trip units.

Series C® M-Frame

Typical Series C M-Frame Circuit Breaker

- All Series C M-frame circuit breakers are HACR rated.
- MDL-frame circuit breakers are available as individual components (Frame, Trip Unit, Terminals), or factory assembled complete breakers.
- M-frame circuit breakers with non-interchangeable trip units are suitable for reverse feed use.

Interrupting Capacity Ratings

UL489/CSA Interrupting Capacity Ratings<sup>①</sup>

Circuit Breaker Type	Number of Poles	Interrupting Capacity (Symmetrical Amperes) (kA)				Page Number
		Volts Ac (50/60 Hz)			Volts Dc <sup>②③</sup>	
		240	480	600

### 100% Rated Types CMDL and CHMDL Electronic Circuit Breakers with Non-Interchangeable Trip Units

The NEC allows the breaker to be rated at 100% of its frame size in an assembly, provided that 90°C wire is applied at the 75°C ampacity. All 100% rated circuit breakers have electronic trip units. Order as individual components: breaker frame, trip unit, rating plug and terminals.

① Ampere rating is established by rating plug.

② For Ac use only.

**Molded Case Switches**

Molded case switches are used as compact switches in applications requiring high current switching capabilities. Molded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Molded case switches are listed in accordance with Underwriters Laboratories, Inc., Standard UL 1087.

① OPTIM 750 and 1050 are factory sealed and do not have the right pole available for accessories.

Series C® R-Frame

Typical Series C R-Frame Circuit Breaker

- R-frame circuit breakers are available as frame (which includes trip unit), rating plug and terminals.
- All R-frame circuit breakers are suitable for reverse feed use.

Instruction Leaflet/FRED Number 29C107 for Breaker; Number 29C883 for Digitrip 310 Trip Unit

- ① For SCR application use 2000 ampere frame.  
 ② Unprotected right pole neutral. Add "P" to catalog number for 100% protected right pole neutral, i.e., "RDC416T33PW".  
 ③ Add suffix "R" to breaker catalog number for ground fault remote indication compatibility.

Series C® R-Frame

100% Rated Digitrip RMS 310 Electronic Circuit Breakers①

The NEC allows the breaker to be rated at 100% of its frame size in an assembly, provided that 90°C wire is applied at 75°C ampacity. Order as individual components: Breaker Frame (which includes Trip Unit) and Rating Plug.

Maximum Continuous Ampere Rating @ 40°C	Circuit Breaker Frame Only				Digitrip RMS 310 Rating Plug Only

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories, Inc. Standards UL486A and UL486B and CSA C22.2 No. 65M. Unless otherwise specified, R-frame

circuit breaker line load terminals are shipped separately for field installation.

Ordering Information

R-frame circuit breakers have Cu/Al terminals as standard and Cu only terminals as an option. Specify if factory installation is required.

Series C Motor Circuit Protectors

**General Information**

Designated as the Cutler-Hammer Types GMCP, HMCP, the Series C instantaneous-only motor circuit protector (MCP) is available in ratings from 3A to 600A for motor starter sizes 0 through 6. The MCP is designed to comply with the applicable requirements of Underwriters Laboratories, Inc. Standard UL489, Canadian Standards Association Standard C22.2 No. 5, and International Electrotechnical Commission Recommendations IEC 157-1.

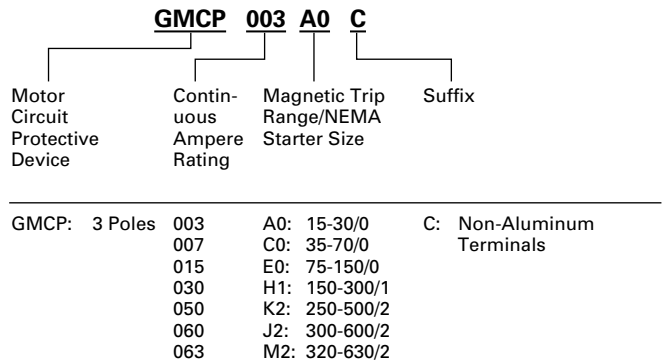

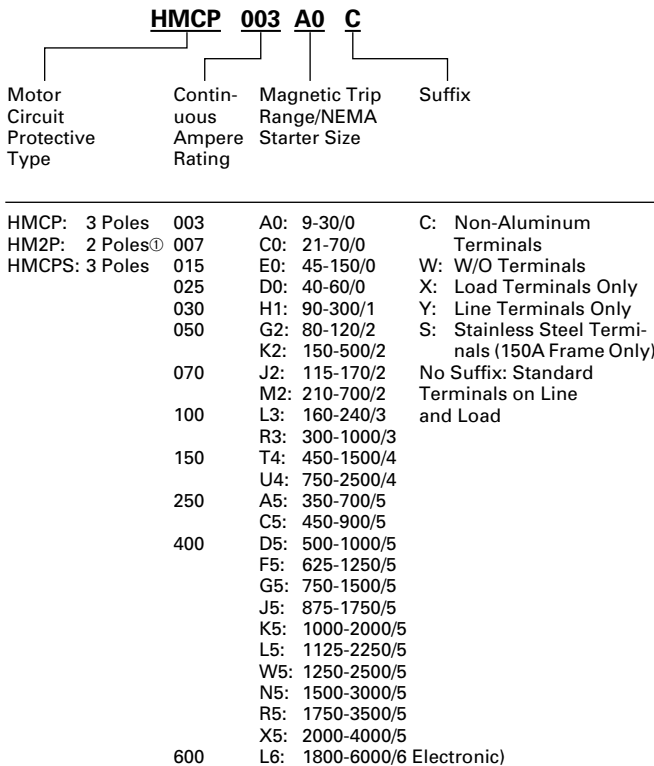

An innovative design of internal components allows higher MCP-starter combination interrupting ratings. The MCP is marked to permit proper electrical application within the assigned equipment ratings.

The MCP is a recognized component (UL File E7819) and complies with the applicable requirements of Underwriters Laboratories, Inc. Standard UL489. It is also designed to comply with the applicable requirements of Canadian Standards Association Standard C22.2 No. 5, International Electrotechnical Commission Recommendations IEC 157-1, and nameplates bear the CE marking.

**Catalog Numbering System**

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

**Motor Circuit Protector Catalog Number**

① On J- and K-Frame HMCPs only.

Instruction Leaflet/FRED Number 15551 for Auxiliary Switch

Instruction Leaflet/FRED Number 15550 for Shunt Trip

### External Mounted Accessories

Description	Number Units in Package	Style Number
Lock Dog (Non-Padlockable)	1	1294C01H01
Mounting Hardware	1	624B375G23
DIN Rail Adapter <sup>②</sup>	10	1225C79G02

Instruction Leaflet/FRED Number 29C191 (DIN Rail Adapter)

### Vari-Depth Handle Mechanism<sup>⑥</sup>

Description	Catalog Number
For Type 1 use	HRGMV11L
For Type 3R, 4X, 12 use	HRGMV14L
Close Coupled Black with Gray Handle	HRGMC10
Close Coupled Red with Yellow Handle	HRGMC30

① Only one accessory may be installed in GMCP.

② For use with standard 35 mm DIN rail such as, 35 x 7.5 or 15 mm per DIN EN50022.

③ LH only.

④ RH only.

⑤ Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown. Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.

⑥ For use with GMCP only.

- ① Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown. Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.
- ② For Dc applications, actual trip levels are approximately 40% higher than values shown.
- ③ Settings above 130 amperes are for special applications. NEC Article 430-110(a) requires the ampere rating of the disconnecting means to be not less than 115% of the motor full load ampere rating.

## Type ELC Current Limiter Attachment (Size 0-4)

The type ELC current limiter attachment for the Series C MCP is designed to provide increased interrupting capacity. The combination may be used for the application up to 200,000A symmetrical at 600 Vac making the MCP suitable for use in network distribution systems or other applications where unusually high fault currents are available. The current limiter connects to the load end of the MCP and is provided with terminals suitable for copper or aluminum conductors. (See table).

Limiters are coordinated with the MCP so that normal fault currents are interrupted automatically by the MCP without any damage to the limiter. Only the rare very high fault is opened by the limiter. Faults that are interrupted by the limiter are interrupted by the limiter also magnetically trip the MCP, opening all three poles, preventing single-phase operation.

Each of the three poles of the type ELC limiter is equipped with an indicator that extends when a fault is interrupted by the limiter.

### Type ELC Current Limiter Terminal Wire Sizes<sup>④</sup>

① Three-pole catalog numbers shown. Two-pole catalog numbers begin with "HM2P" in place of "HMCP."

② Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown. Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.

③ For Dc applications, actual trip levels are approximately 40% higher than values shown.

④ Equipped with electronic trip device.

Typical Series C Earth Leakage Circuit Breaker

## General Information

Series C Earth Leakage Breakers offer superior Class 1 ground fault protection and improved ground fault coordination capability.

Earth leakage ground fault protection differs from other types of systems in its level of sensitivity. The sensitivity of traditional devices is limited by the cumulative error of the residual current sensors and the placement of the phase and neutral conductors inside the current sensor.

Leakage breakers are zero sequence sensing devices. They are factory supplied with a single sensor and ground fault relay built-in. This technique allows for protection sensitivities down to the 30 milliampere level.

Leakage breakers are provided with a full complement of easy adjustments. The ground fault pickup setting is adjustable from 0.03 to 30 amperes in eight steps, and the ground fault time delay setting is adjustable from instantaneous to 2.0 seconds in six steps. When the pickup is set to 30 mA, the time delay setting defaults internally to instantaneous only. Increased selectivity provides for improved coordination with upstream and downstream ground fault devices as well as the flexibility to adjust for transient currents.

## Applications

### Three-Phase, Four-Wire Loads

For three-phase applications with line-to-neutral loads, select 4-pole earth leakage breakers and wire the neutral through the fourth (right) pole.

### Three-Phase, Three-Wire Loads

For applications with only three-phase, three-wire, line-to-line connected loads, select 3-pole earth leakage breakers.

### Single-Phase Loads

For single-phase, two-wire or three-wire applications, use a 3-pole earth leakage breaker and connect all conductors through the breaker.

## Accessories

### Optional Factory Installed Internal Accessories

Earth leakage breakers use the same internal accessories as standard F-, J- and K-Frame Series C Breakers. Internal accessories fit in the right-hand pole space and are available as factory modifications only.

### Optional External Accessories

Series C Earth Leakage Breakers use the same external accessories as the standard F-, J- and K-Frame circuit breakers.

① Package of 3 terminals.

② Package of 4 terminals.

③ 15, 20, 25, and 30 ampere available.

**Type FCL Current Limit-R Thermal-Magnetic Circuit Breakers**

15 to 100 Amperes, 480 Volts Ac  
Non-Interchangeable Trip, Line and  
Load Terminals Included

Type FCL Breaker

**Dimensions / Weights**

**Dimensions, Inches**

Number of Poles	Width	Height	Depth
2-3	4.125 (104.78)	8.75 (222.25)	3.375 (85.73)

**Approximate Shipping Weight, Lbs. (kg)**

2-Pole	9 (4.082)
3-Pole	9 (4.082)

**Listed with Underwriters Laboratories, Inc. except as noted.**

Type FCL breakers are not defined in Federal Specification W-C-375-b.

**Interrupting Capacity Ratings**

Circuit Breaker Type	Volts Ac (50/60 Hz)	Interrupting Capacity (Symmetrical Amperes) (kA)
FCL	240 480	200 150

On all 3-phase Delta, Grounded B phase applications, refer to Cutler-Hammer.

100	FCL2100L	FCL3100L

**Line and Load Terminals**

Breakers listed include line and load terminals. Terminals are Underwriters Laboratories, Inc. listed for wire sizes and types listed below. When used with aluminum cable, use joint compound. To order optional aluminum terminals, add suffix "Z" to breaker catalog number listed.

Maximum Breaker Amperes	Wire Type	AWG Wire Range
<b>Standard Pressure Terminals</b>		
100	Al/Cu	#14-1/0
<b>Optional Al/Cu Pressure Terminals</b>		
50	Al/Cu	#14-#4
100	Al/Cu	#4-4/0

① 2-pole breakers are supplied in 3-pole frames with current carrying parts omitted from the center pole.

**Type LCL Current Limit-R Electronic Circuit Breakers**

125 to 400 Amperes, 600 Volts Ac with Solid State Trip Units

Type LCL Breaker

**Dimensions / Weights**

**Dimensions, Inches**

Number of Poles	Width	Height	Depth
2-3	16 (406.40)	8.25 (209.56)	4.0625 (103.19)

**Approximate Shipping Weight, Lbs. (kg)**

Standard	
2-Pole	32 (14.515)
3-Pole	32 (14.515)
With Ground Fault	
3-Pole	36 (16.329)

**Listed with Underwriters Laboratories, Inc. except as noted.**

Type LCL breakers are not defined in Federal Specification W-C-375-b.

**Interrupting Capacity Ratings**

Circuit Breaker Type	Volts Ac (50/60 Hz)	Interrupting Capacity (Symmetrical Amperes) (kA)
LCL	240	200
	480	200
	600	100

On all 3-phase Delta, Grounded B phase applications, refer to Cutler-Hammer.

**Standard Breakers 600 Volts Ac, 50/60 Hz**

Complete breaker requires frame, rating plug and terminals

Frame Only			
Poles <sup>①</sup>	Standard (Long Delay, Magnetic Trip and Current Limiting)	Magnetic Only <sup>②</sup> and Current Limiting	Long Delay, Magnetic Trip and Adjustable Short Delay Time (.08-.28 seconds), and Current Limiting

**Current Limiters**

Included with breaker, one required per pole.

Application	Catalog Number
Supplied as standard on ratings through 200 amperes.	200LAP08
Supplied as standard on 225 through 400 ampere ratings, optional on lower ratings when a higher "cross-over point" is desired. (Above two limiters replace 800LAP12 formerly supplied as standard on all ratings, 600LAP09 optional on all ratings through 300 amperes, 300LAP05 optional on ratings through 150 amperes, and special rating limiter 1000LAP14.)	400LAP10
Special rating where a higher "cross-over point" is desired on 200 ampere and higher ratings (Replaces limiter 1500LAP20)	500LAP15 ②③

- ① New limiters suitable for replacement in existing breakers by using plug-in conductor from old limiter (instructions included with limiter). Instruction Leaflet/FRED Number 14824
- ② Not listed with Underwriters Laboratories, Inc.
- ③ Protection based on 100,000 ampere maximum fault, 480 volts maximum.
- ④ Set on high side, adjustable to lower limits.

**Terminals<sup>⑤</sup>**

Two terminals are required per pole. Terminals are Underwriters Laboratories, Inc. listed for wire size and type listed below. When used with aluminum conductors, use joint compound. To order optional aluminum terminals, add suffix "Z" to complete breaker catalog number.

Maximum Breaker Amperes	Wire Range, Type, Number of Cables	Terminal Catalog Number

**Interrupting Capacity Ratings**

Underwriters Laboratories, Inc. Listed

600 Volts Ac Maximum: 200,000 Amperes Symmetrical

**Based on NEMA Test Procedures**

250 Volts Dc Maximum<sup>①</sup>: 100,000 Amperes.

On all 3-phase Delta, Grounded B phase applications, refer to Cutler-Hammer.

**Current Limiters**

Included with breaker, one required per pole.

Application	Catalog Number
Supplied as standard on ratings through 500 amperes.	500NB12
Supplied as standard on 600 through 800 ampere ratings, optional on lower ratings when a higher "cross-over point" is desired.	800NB20
Above two limiters replace 1000NB14 formerly supplied on ratings up to 600 amperes, 1500NB20 supplied on 700 amperes, and 2500NB25 supplied on 800 amperes.	

**Terminals<sup>②</sup>**

Two terminals are required per pole. Terminals are Underwriters Laboratories, Inc. listed for wire size and type listed below. When used with aluminum conductors, use joint compound. To order optional aluminum terminals, add suffix "Z" to complete breaker catalog number.

Maximum Ampere Rating	Wire Range, Type, Number of Cables	Terminal Catalog Number
350	1 #1-600 kcmil Cu	T350NB
700	2 2/0-500 kcmil Cu	T700NB1
800	3 3/0-500 kcmil Cu	T1000NB1

**Standard Copper Pressure Terminals**

Supplied as standard on ratings through 1000 amperes. (Replaces limiter 1500PBPR30 formerly supplied on 600 and 700 ampere ratings, and 3000 PBPR27 supplied on 800-1000 ampere ratings.	1000PBPR20
Supplied as standard on 1200 through 1600 ampere ratings. Optional on lower ratings where a higher "cross-over point" is desired. (Replaces limiter 4000PBPR30 formerly supplied on 1200 through 1400 ampere ratings, and 5000PBPR42 supplied on 1600 ampere ratings.	1600PBPR30

**Bus Bar Connectors<sup>⑥</sup>**

**"T" Connector for Cu/Al Bus**

Two required per pole. For rear bus connection. Accepts up to four bus bolts. May be rotated 90°

Catalog Number
BA2000B

**Cable Connector (Optional)**

For "T" connector. Accepts four 600 kcmil copper cables.

Style Number
505C706G04

**Special Breakers<sup>⑥</sup>**

**Magnetic Only Type Tri-Pacs:**  
Available on request.

- ① Higher frequency calibration not available. Minimum of 50 Hz calibration available on special order.
- ② 250 volts Dc rating applies only to magnetic only breakers.
- ③ Shipped separately from breaker.

- ④ Magnetic only trip units are available. Order by description.
- ⑤ 2-pole breakers are supplied in 3-pole frames with current carrying parts omitted from center pole.
- ⑥ Not listed with Underwriters Laboratories, Inc.

### Alarm Switch

For light or alarm indication when breaker trips. Does not function with manual operation. Automatically resets when breaker is related. Standard leads extend 18 inches outside of breaker. Longer leads may be specified. Not field mountable.

Breaker Frame	Normal Pole Meeting	Contact Operation (Specific Type Desired)
FCL	Center	Make or Break
LA Tri-Pac	Left	Make or Break
NB Tri-Pac	Left	Make or Break
PB Tri-Pac	Left	Make or Break
LCL	Left <sup>①</sup>	Make or Break

Alarm Switch Contact Rating (Non Inductive) LA Tri-Pac: 10 amperes, 120 volt Ac; 5A, 240 volt Ac.

### Auxiliary Switch<sup>②</sup>

For auxiliary control circuits. Miniature switches mount within breaker. Commonly used for remote indication of open or closed breaker and electrically interlocking component control circuits. "A" contacts are closed when breaker is closed. "B" contacts are open when breaker is closed. Standard leads extend 18 inches outside of breaker. Longer leads may be specified.

### Factory Mounted Auxiliary Switches<sup>②</sup>

All of the above auxiliary switches can be specified for factory mounting at the same price as listed for the kit. These attachments have the leads out the side of the breaker and are UL listed when factory mounted unless other non UL listed modifications are used (except as noted).

Factory mounted switches only can be supplied for the following breakers: FB Tri-Pac<sup>®</sup>, LA Tri-Pac. Order by description.

- ① When alarm switch is used in conjunction with auxiliary switch, the auxiliary switch is rated 250 volts max., 5 amperes maximum.
- ② Left-hand mounting is standard unless otherwise specified.
- ③ All switches are multiples of 1A-1B with a common electrical connection (See diagram above).
- ④ Field mounting voids UL listing of breaker except on NB Tri-Pac and PB Tri-Pac breakers.
- ⑤ For Dc applications refer to factory.
- ⑥ Right-hand mounting only.

Shunt Trip

For tripping breaker from a remote point. A solenoid device mounts within breaker case. Breaker trips when coil is energized.

Shunt trips should not be used as circuit interlocks using maintained contact pilot devices.

A cutoff switch breaks the circuit to the momentary rated coil when breaker opens. Available for control voltages up to 250 volts Dc or 600 volts Ac. Voltage and frequency must be specified. Standard leads extend 18 inches outside of breaker. Longer leads may be specified.

Shunt Trip Coil Data for Type LCL Current Limiting Breakers

Shunt Trip Voltage Rating	Coil Inrush	
	Amperes	Volt-Amperes
120 Ac	.15	18

- ① 120 volt Ac ratings suitable for 55% pickup for ground fault applications.
- ② Not field mountable on non-automatic breakers (MCS).
- ③ Field mounting voids breakers' UL listing except on NB Tri-Pac and PB Tri-Pac.
- ④ Right-hand mounting only.
- ⑤ Not UL listed.
- ⑥ UL listing pending. Refer to Cutler-Hammer.
- ⑦ Rated 48 volts minimum for ground fault applications.
- ⑧ Also available factory mounted for 24 volt Dc. Order by description.
- ⑨ Not for ground fault.

**Standard Undervoltage Release<sup>①</sup>**

For undervoltage protection. A solenoid device mounts within breaker case. Coil must be energized before closing breaker. Trips breaker when voltage drops below 40 to 60% of coil rating. Picks up and seals in at 80% of coil rating. For line voltages up to 250 volts Dc or 600 volts Ac. Externally mounted resistors are supplied for certain ratings. Standard leads extend 18 inches outside of breaker. Longer leads may be specified.

**Note:** U.V.R. attachments are not designed for, and should not be used as, circuit interlocks. For further information, refer to Cutler-Hammer.

**Factory Mounted Undervoltage Releases<sup>②</sup>**

NB Tri-Pac and PB Tri-Pac undervoltage releases can be specified for factory mounting at the same price as the kit. These attachments have the leads out the side and are UL listed when factory mounted unless other non-UL listed modifications are used.

Factory mounted undervoltage releases only can be supplied for the following breakers: FB Tri-Pac<sup>③</sup>, LA Tri-Pac and FCL; LCL 120 Volts Ac only.<sup>④</sup> Order by description.

**Moisture-Fungus-Corrosion Treatment<sup>②</sup>**

Treatment can be provided to meet customer's specific atmospheric conditions. Moisture-fungus treating material used meets JAN-T-152; treatment meets MIL-V-173a. Requests and orders should specify government specifications or conditions to be met.

① Not Underwriters Laboratories, Inc. listed. Insulated base with front removeable bolted connection.  
② Included with frame

**Handle Locks<sup>①</sup>**

**Non-Padlockable**

For prevention of unintentional operation of breaker. Fits over breaker handle and may be removed.

**Padlockable**

For prevention of unauthorized operation of breaker. Is non-removable once installed on breaker. Meets Underwriters Laboratories, Inc. and California Code requirements.

**Note:** All breakers are trip free and will trip with handle locks attached. Cannot be used when handle extension is used.

③ Not UL listed.  
④ Not available on drawout breakers.  
⑤ Not available for FCL or LCL breakers.  
⑥ Not available on motor operated breakers.

**Kirk Key Interlock<sup>⑤</sup>**

Availability: FB, LA, NB, PB Tri-Pacs.

Permits interlocking of two breakers or one breaker with other devices. Before breaker can be closed, key must be inserted and turned in breaker interlock. Breaker must be opened before key can be removed. It can then be inserted in interlock or other devices to permit their closure. Requests and orders should completely outline interlocking scheme, ultimate user and his address.

**Mechanical Interlocks<sup>②</sup>**

For mechanically interlocking a pair of breakers so that only one may be closed at one time, but both may be open simultaneously.

**Walking Beam Type<sup>②③④</sup>**

Mounts on panel (not included) at rear of breaker. Standard breaker spacing: LA Tri-Pac, NB Tri-Pac: 8-1/2 inches center to center; FB Tri-Pac: 4-3/8 inches center to center; PB Tri-Pac: 12-1/4 inches center to center. Order as a set of two special factory drilled breakers and one walking beam interlock. Specify breaker type, panel thickness and center-to-center dimension of breakers.

**Sliding Bar Type (Field Mountable)<sup>②⑤</sup>**

Mounts on panel (not included) fitting over front of breakers. Standard breaker spacing: LA Tri-Pac, NB Tri-Pac: 8-1/2 inches; FB Tri-Pac: 4-3/16 inches center to center.

**Motor Operators<sup>①</sup>**

Motor operators provide complete remote control by means of a push-button or similar pilot device<sup>②</sup>. Positive switching action is accomplished by use of an operating arm engaging the breaker handle. The unit is energized momentarily to actuate the lever arm moving it to either the "ON" or "OFF" position. The control is broken by an internal cutoff switch. Means for emergency manual operation is provided.

Motor operators are available with motors rated 120 volts Ac, 208 volts Ac, and 240 volts Ac.

The 480 volt operators utilize a 120 volt Ac motor in conjunction with a 480/240 to 120 volt dual voltage transformer. (On LA and larger operators, the transformer is supplied for separate mounting by the customer.)

**Note:** The motor operator is intended only for infrequent operation in line with Underwriters Laboratories, Inc. endurance standard for AB molded case breakers.

① Ac voltage rated operators are UL listed as recognized components.

② The pilot device must be maintained contact type for FB Tri-Pac, FCL, mechanisms; momentary contact type for all others.

**Drawout Frame**

These drawout frames are for use with standard 3-pole Cutler-Hammer molded case circuit breakers. They consist of two separate parts; stationary mounting frame and movable carrier frame. Slide rails are drawer-type, and a screw mechanism is used to engage or withdraw the movable carrier frame.

The drawout frames have three positions: connected, test and disconnected. The frames do not include a safety tripping interlock, or secondary contacts. These are optional items and may be ordered at additional cost.

Breakers mounted in the drawout frames can be equipped with standard breaker accessories including shunt trip, undervoltage release, auxiliary switch, alarm switch and motor operator.

**Secondary Contacts**

These are used to disconnect auxiliary circuits when attachments such as shunt trip or motor operator are used. Available in multiples of four contacts with a maximum of 32 contacts for the NB Tri-Pac. They must be factory mounted. Order by description as similar to stationary or moving frame and specify number of contacts required.

**Selection Data**

Breaker Type <sup>①</sup>	Stationary Mounting Frame Style Number	Movable Carrier Frame Style Number
NB Tri-Pac	2603D85G09	2608D34G12

**Standard Installation**

Order one stationary mounting frame and one movable carrier frame.

Order breakers without terminals or rear connectors.

Order any attachments desired (shunt trip, undervoltage release, etc.)

Order secondary contacts as required:

- A shunt trip, undervoltage release or alarm switch requires two contacts;
- A 1A-1B auxiliary switch requires three contacts;
- A motor operator requires a maximum of four contacts;
- Others as required.

**Racking Crank**

A special crank to engage or withdraw the moving portion of the drawout. A standard 1/2 inch hex socket with extension can be used for this purpose.

Style Number	765A767G01
--------------	------------

**Cell Switches Mounted on Drawout Frames, All Ratings**

Up to four switches can be provided. Order by description.

Each switch provides NO and NC contact that transfers before reaching the test position when being withdrawn, and after the test position when being racked in.

<sup>①</sup> Drawout for FB and LA Tri-Pac, FCL, and LCL Circuit Breakers are not available. PB Tri-Pac movable is available factory-installed only. Order by description.

**General Information**

Engine generator molded case circuit breakers are designed specifically for application on diesel engine powered standby generators where high interrupting circuit breakers are not required. The JG through NG breakers are equipped with a special trip unit, that includes standard thermal (overload) protection and special low magnetic pickup range (FG includes a fixed thermal/magnetic pickup). The standard thermal trip unit provides overload protection for conductors per the National Electric Code. The low magnetic pickup range is approximately two to five times the continuous rating and provides closer low level short circuit protection when applied on generators that have very low short circuit capacity. This combination allows the user to customize the breaker to the generator output.

**Catalog Numbering System**

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers.

FG breakers include both line and load side terminals.

JG, KG, LG, and NG breakers with "W" catalog number suffix do not include any terminals.

JG, KG, LG, and NG breakers without "W" catalog number suffix include both line and load terminals.

Contact Cutler-Hammer for additional ratings and internal/external accessories.

**Interrupting Capacity Ratings**

**UL 489 Interrupting Capacity Ratings**

Interrupting Capacity (Symmetrical Amperes)	
Volts Ac (50/60 Hz)	
240	18,000
480	14,000
600	10,000

**IEC 947-2 Interrupting Capacity Ratings**

Interrupting Capacity (Symmetrical Amperes)	
Volts Ac (50/60 Hz)	
220, 240	18,000/9,000
380, 415	14,000/7,000
660, 690	10,000/5,000

**Standards**

Engine generator molded case circuit breakers are designed to conform with the following standards:

- Underwriters Laboratories, Inc., Standard UL 489, Molded Case Circuit Breakers and Circuit Breaker Enclosures File E7819
- Canadian Standards Association Standard C22.2 No. 5, Service Entrance and Branch Circuit Breakers
- International Electrotechnical Commission Recommendations IEC 947-2, Circuit Breakers

Conformance with these standards satisfies most local and international codes, assuming user acceptability and simplified application.

**Circuit Breakers**

The following table lists FG through NG engine generator breakers with the maximum generator kVA and kW rating. Engine generator breakers

are applied at 115% of the generator full load current rating. The maximum kW rating is based on three-phase generators at 80% power factor.

Magnetic Pickup Range	Maximum Generator Rating 60 Hz						Engine Generator Breaker Catalog Number

Enclosures

Enclosure Description

Type 1 General Purpose

- Surface or Flush Mounting
- 15-1200 Ampere Range
- 600 Volts Ac, 500 Volts Dc

Type 1 enclosed breakers are designed for use in commercial buildings, apartment buildings and other areas where a general purpose enclosure is applicable. The breaker is front operable and is capable of being padlocked in either the On or Off position. Ratings through 1200 amperes are listed with Underwriters Laboratories, Inc. as approved for service entrance application. Both surface and flush mounted enclosures are available.

Type 3R Rainproof Surface Mounting

- Interchangeable Hubs (Through 400 Amperes)
- 15-1200 Ampere Range
- 600 Volts Ac, 500 Volts Dc

This general purpose outdoor service center employs a circuit breaker inside a weatherproof sheet steel breaker enclosure to serve as a main disconnect and protective device for feeder circuits. Ratings through 1200 amperes are listed by Underwriters Laboratories, Inc. as suitable for service entrance application.

Type 12 Dustproof Surface Mounting

- No Knockouts or Other Openings
- 15-1200 Ampere Range
- 600 Volts Ac, 500 Volts Dc

The Type 12 enclosure is designed in line with specifications for special industry application where unusually severe conditions involving oil, coolant, dust and other foreign materials exist in the operating atmosphere. The handle padlocks in the Off position and the cover is interlocked with the handle mechanism to prevent opening the cover with the circuit breaker in the On position. Ratings through 1200 amperes are listed by Underwriters Laboratories, Inc. as suitable for service entrance application.

### General Information

UL listed dc molded case circuit breakers for use in general dc circuits and ungrounded battery supply circuits of UPS systems providing continuous, reliable ac power to computer controlled applications such as financial transactions and telecommunications.

For standard interrupting capacity 250 dc molded case circuit breakers. Refer to Index, Page 1, for appropriate Series C frame size.

The Series C dc breakers listed below use the same internal and external accessories as the standard Series C breaker. NBDC and PBDC use same internal and external accessories as standard NB and PB breakers.

Molded case circuit breakers for transportation application requiring 750 Vdc are available 15 through 2500 ampere 20 kA interrupting capacity at 750 Vdc. Breakers require 4 poles in series for 750 Vdc application. However, 750V is not a UL rating. For 750 Vdc application refer to Cutler-Hammer for ordering information. Dimensions are the same as the standard thermal-magnetic equivalent.

## Type GFM

## Type GFM

Type GFM Ground Fault Protection Device

## Description

Cutler-Hammer Type GFM devices are Class 1 Ground Fault Sensing and Relaying devices designed to comply with the requirements outlined in Underwriters Laboratories, Inc. Standards for Safety entitled: Ground Fault Sensing and Relaying Equipment, UL1053.

Type GFM devices, when properly installed on a grounded electrical distribution system, will sense phase to ground fault currents and cause a disconnect to open and clear the fault instantaneously at predetermined current values. These devices have a maximum voltage rating of 600V, 50/60 Hertz and may be applied in accordance with Article 230-95 of the National Electrical Code.

Type GFM Ground Fault Protective Devices are self-contained combination sensing and relaying devices designed primarily for application on motor circuits and fixed loads where low-level Ground Fault Equipment Protection is required.

GFM devices are available in two basic types with each type having two physical sizes. The two basic types differ in the type of output circuit provided. The first type,

designated either GFM2 or GFM4, employs an internal relay having S.P.D.T. contacts that will operate a remote shunt trip device where control power is available.

The second type, designated either GFM2A or GFM4A, is completely solid state with an output SCR circuit designed to operate a remote, low-energy, flux transfer shunt trip mounted in a molded case breaker. No supplementary control power for the shunt trip is required.

## Size Selection

The proper size selection is a function of the conductor size of the equipment being protected. Types GFM2/GFM2A have approximately a two-inch window opening. Types GFM4/GFM4A have approximately a four-inch window opening.

## Rating Selection

The basic Ground Fault Current Pickup rating of either type GFM device is 5 amperes, i.e., each unit when properly installed will initiate a trip signal to a remote shunt trip with the presence of a 5 ampere Ground Fault Current within established tolerance limits. Separate optional rating plugs are available to alter the pickup rating to a maximum of 100 amperes.

## Control Power

Internal control power is not required to operate Type GFM Ground Fault Protective devices. All internal control power required is derived from the Ground Fault current through the internal current sensor.

External control power is required to operate the remote shunt trips used in conjunction with Type GFM2 and GFM4 devices.

External control power is not required with Type GFM2A and GFM4A devices to operate the special remote, low-energy, flux transfer shunt trips used in molded case circuit breakers.

## Trip Indication/Reset

A combination visual indicator and reset button is provided on the top of Type GFM2 and GFM4 devices to indicate the initiation of a tripping action to clear a Ground Fault. The operation of the internal relay will cause the white button to visibly raise.

To reset the device, the Indicator/Reset button must be depressed. Failure to reset the device will not allow the associated disconnect device to be reclosed.

No Indicator/Reset button is provided on Types GFM2A or GFM4A since an internal SCR is used in the output circuit. These devices reset automatically when the disconnect opens to clear the Ground Fault.

## Application

Type GFM devices may be installed in Zero Sequence or Ground Return Sensing methods, Proper Ground Fault Protection schemes are dependent upon proper system installation and grounding methods.

## Mounting

Each Type GFM device contains a Ground Fault Sensor which is a special current transformer. These are insulated devices which can be mounted directly to enclosure surfaces. Four tubular rivets secure the sensor housing. These four (0.200 dia.) mounting holes can be used to mount the GFM device in either a vertical or horizontal mounting position.

Optional mounting brackets as shown on the next page are available. These brackets may be mounted on either the bottom or side depending upon the installation requirements.

Regardless of the mounting method used, the top of the device with the visual indicator/ reset button and nameplate instructions should be maintained in a visual position after installation. GFM devices should be installed so that all conductors passing through the conductor window are physically centered.

## Type GFM

### Ordering Information

Order by catalog number or style number:

- 1 Basic GFM Unit
- 1 Rating plug if required
- 1 Mounting bracket if required
- 1 Circuit breaker with standard shunt trip factory installed (as required), or optionally when possible, a circuit breaker and field mountable shunt trip as separate items.

### Rating Plug Installation

To install an optional rating plug to obtain other than the minimum 5 ampere rating, remove the terminal cover held in position by a single screw and retention groove. With the cover removed, insert the rating plug in the position indicated. The rating plug is held captive in position with the addition of the terminal cover after the wiring is completed. With the terminal cover in position, the ampere rating of the rating plug remains visible.

### Output Circuitry

Contact ratings for Type GFM2 and GFM4 are 10 amperes continuous, 240 volts Ac maximum. Types GFM2A and GFM4A are intended to be used only with remote flux transfer shunt trips.

### Selection Data

Type GFR

Type GFR

Description

The GFR ground fault relays, current sensors, test panels and accessory devices are UL listed by Underwriters Laboratories, Inc. in accordance with their standard for Ground Fault Sensing and Relaying Equipment, UL 1053, under File E48381.①

A Type GFR ground fault protection system, when properly installed on a grounded electrical system, will sense phase-to-ground fault currents. When the level of fault current is in excess of the pre-selected current pickup and time delay settings, the GFR relay will initiate a trip action of a disconnect device, which will open the faulted circuit and clear the fault.

The GFR devices are UL Class I devices designed to protect electrical equipment against extensive damage from arcing ground faults.

A basic Type GFR ground fault protection system consists of a ground fault relay②, a ground fault current sensor and a disconnect device equipped with a shunt trip device. This disconnect device can be a molded case circuit breaker, a power circuit breaker, a bolted pressure switch or other fusible disconnect device, suitable for application with UL Class I Ground Fault Sensing and Relaying equipment.

Additional optional equipment can be added to the protection system to meet the requirements of the specifying engineer, including:

- Ground Fault Test Panel
- Ground Fault Warning Indicator Relay
- Ground Fault Indicating Ammeter

GFR relays are available with zone selective interlocking circuitry to interlock several relays within the same system. This allows the relay which detects a ground fault to

① Suitable for either surface or semi-flush mounting.  
② These devices are also listed with CSA under their file number 43357.

GFR Relay

instantly clear the fault by tripping the disconnect device. The relay simultaneously sends a signal to relay units "upstream" from the fault to time delay or to block their operation completely. Current sensors in various designs provide a range of "window" sizes to accommodate standard bus and cable arrangements.

Shunt trip attachments may be ordered for field mounting in Cutler-Hammer molded case circuit breakers, or may be ordered factory installed in the breaker.

Electrical Ratings

GFR Relay

Ground Fault Detection Ranges:  
1 to 12, 5 to 60 or 100 to 1200 Amperes

- ① Suitable for either surface or semi-flush mounting.
- ② One end removable for installation.
- ③ When a mechanically reset relay is used with a test panel, both the relay and test panel must be reset following either a simulated ground fault test or actual ground fault.
- ④ Not UL listed.

Accessories

Test Panel (120 Volts Ac)<sup>③</sup>

Used to test the ground fault system, to give an indication the relay has tripped the breaker, and to reset the relay after tripping<sup>④</sup>. These functions may be separately mounted pilot devices.

Optional Test Panel

Control	Test	Catalog Number
120V 50/60 Hz	120V 50/60 Hz	GFRTP
125V Dc	120V 50/60 Hz	GFRTPD

Ground Fault Warning Indicator

This is an accessory item for use with GFR Relays with interlocking circuitry. At approximately 30-50% of the Relay pickup setting, the indicator switches separate 120 volt Ac control power to a lamp or relay, (not included) to give an indication of a ground fault. The indicator is rated 110/120 volts Ac 50/60 Hz for a maximum indicator load of .5 amperes.

Ground Fault Warning Indicator	Style Number
Manual Reset	1234C67G01
Self-Resetting	1234C67G02

Indicating Ammeter<sup>④</sup>

The optional indicating ammeter. It connects to the sensor terminals, through a momentary contact pushbutton, and will indicate (in amperes) any ground fault current flowing through the sensor. Kit includes the ammeter and pushbutton.

5-60 Ampere	752B820G02
100-1200 Ampere	752B820G03

Shunt Trip Attachments

Use 120 volt Ac shunt trips.

Face Plate

Recommended when these relays are semi-flush mounted, to close the door cutout opening.

Description	Style Number
Face Plate	752B410G01

Alarm Switch

Alarm Switch

General Information

For remote indication of automatic trip operation. Does not function with manual switching; however, it will operate when either a shunt trip or undervoltage release is operated.

A "make" contact closes and a "break" contact opens when the alarm/lockout switch operates. The switch automatically resets when the circuit breaker is reset.

- ⑦ A maximum of three ASL plug-in modules may be installed in a circuit breaker.

## Auxiliary Switch

### Auxiliary Switch

### General Information

The auxiliary switch provides circuit breaker contact status information by monitoring the position of the molded cross bar which contains the moving contact arms. The auxiliary switch is used for remote indication and interlock system verification,

and consists of one or two SPDT switches housed in a plug-in module. Each SPDT switch has one "a" and one "b" contact. When the circuit breaker contacts are open, the "a" contact is open and the "b" contact is closed.

Shunt Trip

Shunt Trip

General Information

The shunt trip provides remote controlled tripping of the circuit breaker. The shunt trip consists of an intermittent rated solenoid with a tripping plunger and a cutoff switch assembled to a plug-in module.

When required for ground fault protection applications, certain Ac rated shunt trips, as noted in the Electrical Rating Table, are suitable for operation at 55 percent of rated voltage.

Ordering Information

Select shunt trip catalog number for the voltage within the indicated voltage range. Shunt trip coils are designed to be applied at specific Ac or Dc voltages within the voltage range shown. Electrical ratings are also shown on applicable circuit breaker accessory nameplates.

G-Frame

Shunt Trip (LH 3-Pole only)

① Average unlatching time: 6 milliseconds.  
 ② Average circuit breaker contact total opening time: 18 milliseconds.  
 ③ Endurance: 6000 electrical operations plus 4000 mechanical operations.  
 ④ Not listed with Underwriters Laboratories, Inc., for field installation.  
 ⑤ Pigtail wire size: No. 18 AWG (0.82 mm<sup>2</sup>).  
 ⑥ Standard pigtail lead exit location.

⑦ 120 Vac marked suitable for ground fault protection devices.  
 ⑧ Standard mounting location.  
 ⑨ Not for use on 4-pole circuit breakers.  
 ⑩ Endurance – 6000 electrical operations plus 2000 mechanical operations.  
 ⑪ Supply voltages suitable for use with Class 1 GFP devices. Marking label included with accessory kits.

⑫ Listed with Underwriters Laboratories, Inc. for field installation under E64983.  
 ⑬ Standard mounting location – leads exit rear of breaker.  
 ⑭ Suitable for use with Class 1 ground fault sensing element.

- ① Approximate unlatching time of 6 milliseconds.
- ② Average circuit breaker contact total opening time approximately 62 milliseconds, at rated voltage.
- ③ Endurance – 500 electrical operations and 2500 mechanical operations.
- ④ Shunt trip can be operated up to a maximum of six times per minute.
- ⑤ Maximum operating voltage – 110% of maximum voltage range rating.
- ⑥ Pigtail wire size – No. 18 AWG (0.82 mm<sup>2</sup>). Leads are yellow and white.
- ⑦ Suitable for use with Class 1 GFP devices; marking label supplied with accessory kit.
- ⑧ Listed with Underwriters Laboratories, Inc. for field installation under E64983.
- ⑨ A maximum of two shunt trip plug-in modules may be installed in a circuit breaker.

Low Energy Shunt Trip

Low Energy Shunt Trip

General Information

Low energy shunt trip devices are designed to operate from low energy output signals from dedicated current sensors typically applied in ground fault protection schemes. However, with a proper control voltage source, they may be applied in place of conventional trip devices for special applications. Flux paths surrounding permanent magnets used in the shunt trip assembly hold a charged spring poised in readiness to operate the circuit breaker trip mechanism. When a 100

microfarad capacitor charged to 28 Vdc is discharged through the shunt trip coil, the resultant flux opposes the permanent magnet flux field, which releases the stored energy in the spring to trip the circuit breaker. As the circuit breaker resets, the shunt trip reset arm is actuated by the circuit breaker handle, resetting the shunt trip. The plug-in module is mounted in retaining slots in the top of the trip unit. Coil is intermittent-rated only. Cutoff provisions required in control circuit.

Ordering Information

Select shunt trip catalog number for the voltage within the indicated voltage range. Shunt trip coils are designed to be applied at specific Ac or Dc voltages within the voltage range shown. Electrical ratings are also shown on applicable circuit breaker accessory nameplates.

① Cutoff provisions required in control circuit.

② Listed with Underwriters Laboratories, Inc. for field installation under E64983.

③ Standard mounting location – leads exit rear of breaker.

④ For use with thermal-magnetic trip units only.

Undervoltage Release Mechanism

Undervoltage Release Mechanism

General Information

The undervoltage release mechanism monitors a voltage (typically a line voltage) and trips the circuit breaker when the voltage falls to between 70 and 35 percent of the solenoid coil rating.

The undervoltage release mechanism consists of a continuous rated solenoid with a plunger and tripping lever mounted in a plug-in module. The tab on the tripping lever resets the undervoltage release mechanism

when normal voltage has been restored and the circuit breaker handle is moved to the reset (or OFF) position. With less than pickup voltage applied to the undervoltage release mechanism, the circuit breaker contacts will not touch when a closing operation is attempted.

**Note:** Undervoltage release mechanism accessories are not designed for, and should not be used as, circuit interlocks.

Ordering Information

Select handle reset undervoltage release mechanism catalog number for the voltage within the indicated voltage range. Undervoltage release mechanism coils are designed to be applied at specific Ac or Dc voltages within the voltage range shown. Electrical ratings are shown on applicable circuit breaker accessory nameplates.

Instruction Leaflet/FRED Number 15553

**Note:** G-frame circuit breakers are factory sealed. Underwriters Laboratories, Inc., requires that internal accessories be installed at the factory.

Internal accessories are UL listed for factory installation under E7819.

Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

① Includes 24 inch external pigtail leads, #18 AWG (16-.010).  
 ② A maximum of two internal accessories may be mounted in a three-pole circuit breaker.  
 ③ Suitable for mounting in left pole only of 3-pole breaker.

Internal accessories are UL listed for factory installation under E7819.

Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

## Accessory Terminal Block/Cutler-Hammer PowerNet Communications Kit (OPTIM 550 only)

### Accessory Terminal Block (R-Frame)

(For Fixed Mounted Configuration)

#### General Information

Internal accessory wiring leads are normally supplied with pigtail leads (No. 18 AWG) that exit from the right side of the circuit breaker. Where specified, fixed mounted accessory terminal blocks are available. A maximum of one 24-point terminal block can be installed on the right side of the circuit breaker for the internal accessories.

For convenience in determining the appropriate number of terminal block points required, refer to table at right.

## Cutler-Hammer PowerNet Communications Kit (OPTIM 550 only) K-, L-, and N-Frames

#### General Information

The Cutler-Hammer PowerNet Communications Kit can be ordered to add Cutler-Hammer PowerNet communications to an existing OPTIM 550 breaker in the field. An 18-inch wiring pigtail is routed to the rear of the breaker: two wires for Cutler-Hammer PowerNet and two wires for 24V Dc (45 mA load). It is recommended that the power supply be an "isolated high quality" unit.

Drawout Cassette

Drawout Cassette

The drawout cassette is currently for use with the standard 3-pole 65 kA/480 Vac, 1600A and 2000A RD circuit breakers only. It consists of two separate components: the movable mechanism which is factory mounted to the circuit breaker frame (shown in figure) and the stationary mechanism which is housed in the cassette and shipped separately.

The drawout mechanism has four positions.

- Connected – The breaker is fully connected to the primary stabs and secondary contacts.
- Test – The breaker is not connected to the primary stab but is connected to the secondary contacts.
- Disconnected – Both the primary stabs and the secondary contacts are disconnected.
- Withdraw – The breaker can be removed from the cassette.

## Termination Hardware

### Terminal End Covers

#### F-Frame

The terminal end covers are designed for use in motor control center applications where, because of confined spaces, line side conductors are normally custom fitted. The molded end covers are made of high dielectric glass-polyester and slide over the line ends of the circuit breaker. Close fitting conductor openings are molded into the end covers. The end cover and circuit breaker case fit together to form terminal compartments that isolate discharged ionizing gases during circuit breaker tripping. Terminal end covers are available with two conductor opening diameters, 0.25 and 0.41 inch, and are listed per UL File E7819. (Field installation only.)

#### Ordering Information

The terminal end cover is available for 3-pole circuit breakers only. Two conductor opening sizes are available. Specify quantity (one per circuit breaker) when ordering.

Conductor Opening Diameter (Inches)	Catalog Number
0.25 (6.35 mm)	<b>TEC1</b>
0.41 (10.41 mm)	<b>TEC2</b>

### Interphase Barriers

The interphase barriers provide additional electrical clearance between circuit breaker poles for special termination applications. The barriers are high dielectric insulating plates that are installed in the molded slots between the terminals. (Field installation only.) Two per package.

Handle Locking and Blocking Devices

Padlockable Handle Lock Hasp

The padlockable handle lock hasp allows the handle to be locked in the ON or OFF position. (Trip-free operation allows the circuit breaker to trip when the handle lock holds the circuit breaker handle in the ON position.) The hasp mounts on the circuit breaker cover within the trimline. The cover is predrilled on both sides of the operating handle so that the hasp can be mounted on either side of the handle. The hasp will accommodate up to three padlocks with 1/4-inch (6 mm) shackles. Listed per UL File E7819. (Field installation only.)

The padlockable handle lock can be mounted on either side of the operating handle. One per circuit breaker. (Field installation only.)

① For padlockable handle lock hasp to padlock handle in OFF position only order either catalog number.

## Mechanical Interlocking Devices

### Key Interlock Kit (Lock Not Included)

The key interlock is used to externally lock the circuit breaker handle in the OFF position. When the key interlock is locked, an extended deadbolt blocks movement of the circuit breaker handle. Uniquely coded keys are removable only with the deadbolt extended. Each coded key controls a group of circuit breakers for a given specific customer installation.

The key interlock assembly is Underwriters Laboratories, Inc., listed for field installation under UL file E7819 and consists of a mounting kit and a purchaser supplied deadbolt lock. The mounting kit comprises a mounting plate, which is secured to the circuit breaker cover in either the left- or right-pole position, key interlock mounting screws, and a wire seal. Specific mounting kits are required for individual key interlock types.

### Ordering Information

Key interlock mounting kits are for field installation only. Select mounting kit catalog numbers to match type of lock used. Key interlocks are supplied by customer.

Mechanical Interlocking Devices

Sliding Bar Interlock

The sliding bar interlock provides mechanical interlocking between two adjacent 3-pole circuit breakers. It is installed on the enclosure cover between the circuit breakers. When the sliding bar interlock handle is moved from one side to the other, a bar extends to alternately block movement of the circuit breaker handles and prevents both circuit breakers from being switched to ON at the same time. Sliding bar interlocks are not UL listed. (Field installation only.)

Ordering Information

The sliding bar interlock is available for mounting between two adjacent 3-pole circuit breakers with circuit breakers centerline spacing as indicated in table and enclosure front panel thickness of 1/8 or 3/16 inch. (For field installation only.)

Frame	Centerline Spacing (inches)	Catalog Number	Instruction Leaflet/FRED Number
F	4-3/16	SBK1	29C310
J	4-3/8	SBK2	29C310
K	5-3/4	SBK3	29C310
L, M	8-1/2	SBK4	29C311
N	8-1/2	SBK5	46A8396

Walking Beam Interlock

The walking beam interlock provides mechanical interlocking between two adjacent circuit breakers of the same pole configuration. The walking beam interlock mounts on a bracket behind and between the circuit breakers. A plunger on each end of the beam is inserted through an access hole in the back plate and base of each circuit breaker. The walking beam interlock prevents both circuit breakers from being switched ON at the same time. If a walking beam interlock is installed, the wiring troughs in the back of the circuit breaker case are blocked by the plungers and cannot be used for cross wiring. Factory modified circuit breakers are required for this application. UL File E3816.

Ordering Information

The walking beam interlock is available for mounting between two adjacent circuit breakers spaced 1/4-inch apart and having the same pole configuration. The two circuit breakers must be factory modified to accept the walking beam interlock assembly (suitable for use with either 2-, 3-, or 4-pole circuit breakers). With properly modified circuit breakers, the walking beam interlock is suitable for field installation. Order circuit breakers specifying modification for walking beam and select walking beam interlock from table on this page. Circuit breakers and walking beam interlock are boxed and shipped separately.

## Electrical Operator

### Electrical Operator<sup>①</sup>

The electrical (solenoid) operator is a single solenoid mechanism that enables local and remote circuit breaker ON, OFF, and reset switching. The electrical operator is mounted on the circuit breaker cover within the trimline of the circuit breaker. The electrical operator uses a unique bistable latch that allows the device to operate using one solenoid. The accessory provides high-speed switching with a maximum operating time of 5 cycles (80 ms) making it suitable for generator synchronizing applications.

Means are provided for remote electrical operation and for local manual operation. A special slide includes provisions for padlocking the circuit breaker handle in the OFF position. The slide will accept three padlock shackles with a maximum diameter of 1/4-inch (6 mm) each. An interlock electrically disconnects the solenoid when the electrical operator cover is removed. The above table provides electrical rating data for the electrical (solenoid) operator.

The electrical (solenoid) operator is Underwriters Laboratories, Inc., listed as a circuit breaker accessory under UL File E64983.

- ⑧ Maximum operating time: 5 cycles (80 ms).

Electrical Operator

The motor operator allows the circuit's breaker to be opened, closed, or reset remotely. It also has a lock-off capability and provisions for manual operation.

The motor operator contains a reversible motor connected to a ball screw. The ball screw drives the circuit breaker handle. Limit switches and relays are used to control the motor.

The motor operator is UL listed as a recognized component suitable for field installation on all type L-frame circuit breakers and molded case switches under UL File E64124.

From the point of energization of the closing mechanism at 85% voltage, the closing time is 30 cycles ± 10%.

 ⑪ A minimum 1 kVA power source is recommended for motor operation.  
 ⑫ Applied voltage should be no less than 85% or no more than 110% of rated.

## Plug-in Adapters

### Plug-in Adapters

Plug-in adapters simplify installation and front removal of circuit breakers. Individual line and load plug-in adapters are available for rear connection applications on 2-, 3-, and 4-pole circuit breakers. Common mounting plates for line- and load-end adapters are available.

Rear Connecting Studs

Rear Connecting Studs

Rear connecting studs are available in several sizes to accommodate specific fixed-mounted circuit breaker applications.

Each rear connecting stud assembly consists of one stud and one tube. To maintain proper clearances between poles, select alternate long and short stud assemblies for circuit breakers with more than one pole. One assembly is required for line-end and one for load-end of each pole. Tubes must be ordered separately. Connecting studs are available only with English thread sizes.

Panelboard Connecting Straps

Panelboard Connecting Straps

Panelboard connecting straps are used to connect the circuit breaker terminals to the panelboard bus. The panelboard connecting straps are available with various ratings for outside and center poles. (Field installation only.)

Ordering Information

Panelboard connecting straps are available to meet the needs of most standard panelboard applications. Style numbers for mounting brackets for CDP panelboard installations are also included.

Refer to panelboard manufacturer for compatibility.

Handle Mechanisms

Flange Mounted Flex Shaft™

The Flex Shaft type handle mechanism is an extra heavy-duty handle mechanism designed for mounting in flange-type enclosures. An operating handle, flexible shaft, and mechanism are required for standard application.

The handle can be locked in the RESET position with up to three padlocks. The handle is suitable for Types 1, 3R, 4①, 4X①, and 12 fabricated enclosures. The handle fits the industry standard cutout.

Eight lengths of shafts are available for use with the wide range of depths of various enclosures (3 feet through 10 feet). These choices enable this mechanism to be mounted in various depth, width, and height enclosures.

**Note:** when selecting the length of shaft, ensure minimum bending radius of 4 inches is maintained to operate properly.

The standard method of shipment includes the mechanism preset at the factory; however, minor field adjustments may be required.

For this publication, the term Circuit Breaker shall also include the molded case switch and Series C motor circuit protector (HMCP).

UL File E64893.

① Type 4/4X handle mechanisms are available. Add suffix X to complete catalog number.  
② Add suffix I to complete catalog number for IEC handle. Add suffix L to complete catalog number for 6-inch handle.

Ordering Information

Catalog Number includes complete assembly consisting of C371 handle, flexible shaft, operating mechanism, and door interlock hardware to fit industry standard flange cutout.

Handle Mechanisms

Flange Mounted  
Type SM Safety

The SM safety handle mechanism provides a means of externally operating a circuit breaker mounted in an enclosure and is designed to reduce the possibility of circuit breaker tampering. The handle mechanism is especially suited for use in automotive and machine tool industries through its conformance to Type 12 and J. I. C. requirements. A specially modified handle mechanism for Type 4 enclosure application is also available order by description. The handle mechanism will accept up to three padlock shackles, each with a maximum diameter of 3/8 inch (9.52mm). UL File E64893.

① Width spacer kits cannot be used with short rod at minimum enclosure depth.

Through-the-Door  
Type MC Motor Control

The MC motor control handle mechanism is a linear-operating, fixed-depth mechanism designed for through-the-door mounting in standardized and shallow depth enclosures. The handle mechanism provides positive operation and direct disconnect status indication. It is interlocked with the enclosure door so that the door can be opened only when the handle is set to OFF. (A defeater, supplied with the handle mechanism, can be used to bypass the interlock for maintenance and inspection.) The handle mechanism will accept up to three padlock shackles, each with a maximum diameter of 3/8 inch (7.92 mm).UL File E56845.

**Handle Mechanisms**
**Through-the-Door Rotary**

These compact rotary handle mechanisms are especially designed for use with the GD/GC/GHC circuit protection devices. The Close-Coupled version is designed for mounting in a shallow enclosure, while the Vari-Depth is suitable for deep enclosures.

Both G-frame handle mechanisms are suitable for use on Type 1 enclosures. In addition, the Vari-Depth handle mechanism is offered for use with Types 3R, 12, and 4X enclosures.

The new handles are a compact, plastic, general purpose design which is easy to install. These mechanisms are commonly used where high volume, standardized enclosures are being fabricated.

The Close-Coupled design is available with or without a shroud. The handle is offered in two colors; black or yellow. An escutcheon ring and interlock clip are provided as standard. This standard design includes a lock-off feature.

The Vari-Depth design includes an operating mechanism, shaft, and external handle. The handle is available in two colors; black or yellow. An external lock-off is included in the handle design. The shaft may be cut to size to fit the enclosure.

UL and CSA listed.

Handle Mechanisms

Through-the-Door Rotary

The general purpose rotary handle mechanisms are suitable for use with Types 1, 3R, (4, 4X), and 12 fabricated enclosures. They are designed for use with Series C F-frame circuit breakers, molded case switches, and motor circuit protectors (HMCP).

Required for a standard application are the operating handle, shaft, and mechanism.

The operating handle has been designed to meet NFPA 79 requirements. It may be mounted in either the horizontal or the vertical direction. The handle was ergonomically designed with extra clearance for a "gloved hand" to operate. It may be padlocked in the OFF position utilizing 3 padlocks.

The standard label on the operating handle indicates ON/Tripped/OFF/Reset. UL File E64893

To meet the various enclosure depths, four variable depth shafts are offered (6-inch, 12-inch, 16-inch, and 24-inch). Each shaft includes a support brace to ensure proper alignment. In addition, the 16-inch and 24-inch extra long shafts include an adjustable support bracket.

The standard mechanism located on the breaker does include means for internally locking the breaker in the "OFF" position with up to three padlocks each with a maximum diameter of .312-inch.

Type 4/4X handles are similar to standard handles except they include an internal neoprene gasket. Type 4/4X handle style number is 6648C22G03. Due to gasketing effect between the handle and the housing, the handle may not indicate a tripped position.

Accessories

As an option, an auxiliary switch is offered so that the control panel builder may electrically indicate the status of the breaker. This accessory would be mounted on the mechanism and comes with 24-inch pigtail leads.

Style Number	5108A61G01
--------------	------------

Refer to CD-ROM, SA.74A.01.T.E, for replacement type Vari-depth and AMT handle mechanisms.

- ① Complete catalog number includes the standard handle, mechanism, shaft, and support brace/bracket.
- ② Handle is designed suitable for Types 1, 3R, and 12 enclosures. Use style number 6648C22G03 for Type 4/4X handle or add X suffix to complete catalog number.
- ③ The standard handle label indicates ON/Tripped/OFF/Reset.
- ④ Breaker mechanism includes a shaft support bracket and its parts.
- ⑤ Longer shafts (16-inch and 24-inch) include an adjustable support extension.
- ⑥ IEC Handle Mechanism supplied with Metric thread mounting hardware.
- ⑦ Complete Catalog Number includes a handle, mechanism and shaft.

Handle Mechanisms

Door Hardware

F-, J-, K-, L- and M-Frames

Door Hardware listed in this section may be used with Types SM and AMT handle mechanisms.

Three choices of door hardware and an auxiliary handle are offered to provide the best latching scheme for individual needs. The door hardware is designed with a provision for padlocking, and a coin-proof slot that requires the use of a tool to open the door.

Select desired hardware below. Additional latches can be ordered from accessories section if desired.

Hardware Item	Description and Catalog Number
	With sliding latches for smaller panels up to approx. 30-inch high.  Catalog Number Right Hand: <b>DH1R</b> Left Hand: <b>DH1L</b>  Instruction Leaflet/FRED Number 13327(L); 13326(R)

**Type LFD**

The LFD current limiter is an accessory that bolts to the load end of a standard FDB or FD thermal-magnetic circuit breaker, providing 200,000A interrupting capacity at up to 600 Vac. LFD current limiters for thermal-magnetic circuit breakers are listed with Underwriters Laboratories, Inc., under File E47239.

## Ground Fault Alarm Unit

The Ground Fault Alarm Unit is a remotely mounted device with a combination indicating light/test button that will light when the breaker trips or alarms on ground fault. The Ground Fault Alarm Unit requires a separate 120 Vac power source to power the light and the internal relay which has 1 N.O. and 1 N.C. contacts for remote indication. The Ground Fault Alarm Unit can be panel mounted for ordering with an optional face mounting bracket. For use on Digitrip 310 only. K- through N-frame.

## IQ Energy Sentinel

The IQ Energy Sentinel is a highly accurate, microprocessor-based, breaker-mounted device designed to

monitor power and energy readings. It represents an alternative to watt meters, watt-hour meters, and watt demand meters. Key advantages include savings in space, lower installation costs, and remote monitoring capability.

The IQ Energy Sentinel mounts on the load side of a Series C F-frame (150 ampere) circuit breaker. It can be applied on three-phase, four-wire systems, or single-phase, three-wire systems with voltage connected through phases A and C.

Instruction Leaflet/FRED Number 17437

For more information see Descriptive Bulletin 8178.

## Potential Transformer Module

The Potential Transformer Module is required for Series C, Digitrip OPTIM 1050, to provide a voltage input to allow the trip unit to monitor power and energy as well as power factor. The Potential Transformer Module is a 6 VA transformer with a primary voltage input of up to 600V line to line. Three 0.1 ampere fuses are provided on the primary of the transformer and can be used for isolation purposes during dielectric testing. The device is normally panel mounted and can feed up to 16 OPTIM trip units.

### Ordering Information

## Solid-State (Electronic) Portable Test Kit

The solid-state (electronic) portable test kit provides verification of performance of all ratings of Digitrip 310 electronic trip units installed in Series C circuit breakers while in service under varying load and/or phase imbalance. The test kit operates on 120-volt, 50/60 Hz power; it includes complete instructions and test times for testing long time, short time/instantaneous operation and optional ground fault operation of the circuit breaker.

① Model 550 OPTIMs require the Cutler-Hammer PowerNet field upgrade kit.

OPTIM System Components

**Breaker Interface Module (BIM)**

The Breaker Interface Module (BIM) is a panel mounted user interface device that is mounted on the front of an electrical assembly or at a remote location. The BIM is used to access, configure, test and display information for OPTIM trip units and other devices. The BIM consists of four display windows, eight function buttons, 18 LEDs, and a graphical time/current curve to provide breaker status, operational information, protection status and energy monitoring. A 24 Vdc power supply is required to provide power to the BIM. This is supplied by the switchboard builder to Cutler-Hammer specifications. The BIM is a member of the Cutler-Hammer PowerNet family of communicating devices that connects OPTIM trip units, Digitrip RMS 810/910 trip units and energy sentinels as a subnetwork system. The BIM can also be connected to a main network via a PONI module to Cutler-Hammer PowerNet software.

**Ordering Information**

Catalog Number
<b>BIM</b>

Instruction Leaflet/FRED Number 29C893

① The OPTIMizer can work off of 32 Vdc control power, although 24 Vdc is the standard on OPTIM breakers.

② Model 550 OPTIMs require the Cutler-Hammer PowerNet field upgrade kit.

**Digitrip OPTIMizer**

The Digitrip OPTIMizer is a handheld programmer that is used to access, configure, test and display information from OPTIM trip units. The OPTIMizer plugs into the front of an OPTIM trip unit via an eight-pin telephone jack and is powered by a nine-volt battery or the auxiliary power module. In addition, a three-pin INCOM network connection is also provided to program other OPTIM devices on the system. An Auxiliary Power Module connection provides a trip test when control power is not present at the breaker. The OPTIMizer is supplied as a standard package to include the programmer, the eight-pin connection cord, battery and carrying case. The Auxiliary Power Module is optional.

**Ordering Information**

Catalog Number
<b>OPTIMizer – Standard Package</b>

Instruction Leaflet/FRED Number 29C892

**Note: 24 Vdc Power Supply**

A 24 Vdc power supply is required for all Digitrip OPTIM trip units that are required to communicate either on the main Cutler-Hammer PowerNet network or as a subnetwork to a BIM. The breaker's load is 45 mA of current. Typically one power supply is required per switchboard and can provide control power to a BIM and the OPTIM trip units. The 24 Vdc power supply should be an "isolated high quality" power supply with a "CE" label, and is normally provided by the switchboard manufacturer to Cutler-Hammer recommendations.

**Auxiliary Power Module**

The Auxiliary Power Module is a power supply requiring 120 Vac input at 50 or 60 Hz that provides a 32 Vdc output<sup>①</sup>. The Auxiliary Power Module provides control power for testing an OPTIM trip unit when other means of control power is not available or for continuous OPTIMizer operation versus temporary with a battery. The Auxiliary Power Module connects into the top of the Digitrip OPTIMizer via a keyed receptacle. The main application for the Auxiliary Power Module would be for the testing of a stand-alone non-communicating OPTIM breaker that ordinarily would not have control power.

**Ordering Information**

Catalog Number
<b>PRTAAPM</b>

**Cutler-Hammer PowerNet Software**

Series C Digitrip OPTIM trip units can communicate back to a central Personal Computer by installing Cutler-Hammer PowerNet software<sup>②</sup>. In addition other software packages are available to allow the user to configure the trip units as well as monitor system performance.

Instruction Leaflet/FRED Number 29C890

## Special Calibration<sup>①</sup>

Special non-UL-listed calibrations are available for certain ambient temperatures other than 40°C and for frequencies other than 50/60 Hz or Dc. Reduced interrupting ratings will apply for 400 Hz applications. Maximum thermal calibration is limited to 135A at 400 Hz.

Suffix H01 400 Hz.

See Application Data 29-160 for information regarding special conditions.

## 50°C Calibration<sup>①</sup>

Add suffix "V" to catalog number for complete breaker, listed above, when ordering listed ampere ratings for breakers to be used in 50°C ambients.

## Moisture-Fungus Treatment

All Series C circuit breaker cases are molded from glass-polyester which does not support the growth of fungus. Any parts which are susceptible to the growth of fungus will require special treatment.

Suffix J01 Fungus Treated

## Freeze-Tested Circuit Breakers

The circuit breakers may be ordered with freeze testing. This option uses special lubrication and mechanical operation is verified at -40°C.

Suffix F01 Freeze Tested.

## Marine Applications

F-Frame circuit breakers can be supplied to meet the following marine specifications:

U.S. Coast Guard CFR 46 ABS –  
American Bureau of Shipping  
IEEE 45

These specifications generally require molded case circuit breakers to be supplied with 50°C ambient calibration, special nameplating, and plug-in adapter kits. When plug-in adapter kits are used, no terminals need be supplied.

Series C circuit breakers can also be supplied to meet UL489 Supplement SA (Marine Use) and UL489 Supplement SB (Naval Use).

UL489 Supplement SA applies to vessels over 65 feet in length. Requirements include 40°C ambient calibration, special labeling, and no use of aluminum conductors or terminals.

Suffix H08 "Marine."

UL489 Supplement SB requires 50°C ambient calibration, vibration testings, special nameplating and no use of aluminum conductors or terminals.

Suffix H09 "Naval."

<sup>①</sup> Not listed with Underwriters Laboratories, Inc.

<sup>②</sup> For use with standard 35 mm DIN rail such as, 35 x 7.5 or 15 mm per DIN EN50022.

**NEMA 1 General Purpose**

**Surface or Flush Mounting  
15-1200 Ampere Range  
600 Volts Ac, 500 Volts Dc**

NEMA 1 enclosed breakers are designed for indoor use in commercial buildings, apartment buildings and other areas where a general purpose enclosure is applicable. The breaker is front operable and is capable of being padlocked in the Off position. (Padlocking not available on enclosures for Quicklag® breakers.) Ratings through 1200 amperes are listed with Underwriters Laboratories, Inc. as suitable for service entrance application. Both surface and flush mounted enclosures are available. UL File Number E7819. CSA File Number LR84319.

**NEMA 3R Rainproof Surface Mounting**

**Interchangeable Hubs (through 400 amperes) 15-1200 Ampere Range  
600 Volts Ac, 500 Volts Dc**

This general purpose outdoor service center employs a circuit breaker inside a weatherproof sheet steel enclosure to serve as a main disconnect and protective device for feeder circuits. The operating handle can be padlocked in the Off position, and is interlocked to prevent the door from opening when the breaker is On. Ratings through 1200 amperes are listed by Underwriters Laboratories, Inc. as suitable for service entrance application. UL File Number E7819. CSA File Number LR84319.

**NEMA 4/4X, 5 Water and Dustproof**

**Stainless Steel – Type 304  
Surface Mounting  
15-1200 Ampere Range  
600 Volts Ac, 500 Volts Dc**

This enclosure meets NEMA 4/4X and 5 requirements for water and dustproof applications and has no knockouts or other openings. It is particularly well suited for use in dairies, borax mines, breweries, paper mills and other process industries. The operating handle can be padlocked in the Off position, and is interlocked to prevent the door from opening when the breaker is On. Ratings through 1200 amperes are Underwriters Laboratories, Inc. listed as suitable for service entrance application. UL File Number E7819. CSA File Number LR84319.

**NEMA 12 Dustproof Surface Mounting**

**No Knockouts or Other Openings  
15-1200 Ampere Range  
600 Volts Ac, 500 Volts Dc**

The Type 12 enclosure is designed in line with specifications for special industry application where unusually

severe conditions involving oil, coolant, dust and other foreign materials exist in the operating atmosphere. The handle padlocks in the Off position and the cover is interlocked with the handle mechanism to prevent opening the cover with the circuit breaker in the On position. Ratings through 1200 amperes are listed by Underwriters Laboratories, Inc. as suitable for service entrance application. A NEMA 12 semi-dust-tight design which includes knockouts is available. These units are rated 15-400 amperes, 600 volts Ac, 500 volts Dc. UL File Number E7819. CSA File Number LR84319.

**NEMA 7, 9 Hazardous Location**

**Cast Aluminum, Explosionproof  
Surface Mounting  
15-800 Ampere Range  
600 Volts Ac, 250 Volts Dc**

Hazardous location, Class I, Groups B (except XFDN050), C, D; Class II, Groups E, F, G. This special service cast aluminum enclosure is supplied with a wide, machined flanged cover to prevent igniting outside atmospheres by arcing from inside the enclosure. Front operable, the handle padlocks in the Off position. Enclosures rated 600 amperes and above have lift-off hinges for ease of assembly. UL and cUL File Number E71279.

Breather and Drain, Hazardous Enclosures<sup>⑤</sup>

Description	Compliance	Conduit Opening	Catalog Number
A Universal Breather/ Drain Fitting is installed in the top of an enclosure to provide ventilation to minimize condensation and in the bottom to allow drainage of accumulated condensation while maintaining explosion proof integrity.	Type BD: NEMA 7 – Class I, Groups C, D; Class I, Zone 1, Group IIB NEMA 9 – Class II, Groups F, G	1/2	<b>XPBD2</b>
	Type DBB: NEMA 7 – Class I, Groups B, C, D; Class I, Zone 1, Group IIB + Hydrogen NEMA 9 – Class II, Groups E, F, G	1/2	<b>XPDBB50</b>

- ① Enclosures only shown above; if an assembled enclosed circuit breaker is required refer to Cutler-Hammer Satellite.
- ② Suitable for use with one-pole breaker base mounting plate kit. OCCBP required.
- ③ Enclosure must have date stamp later than 4-15-98.
- ④ Maximum wire size: 4/0.
- ⑤ Availability to be announced.
- ⑥ LCL requires additional adapter plate 1223C06G01.
- ⑦ LA-P requires additional adapter plate S/N 1223C06G02.
- ⑧ If ground fault protection is required, contact regional satellite.

**Conduit Openings**  
Refer to outline dimensions for size and location of standard conduit openings. In addition, 1/2-inch openings are drilled and tapped for breather and drain. Unless ordered with breather and drain, these openings are plugged. Refer to Cutler-Hammer for list price of breather and drain.

Circuit Breaker Enclosure Interpretation Data

		1200

\* "N" in this position indicates enclosure complies with 1981 NEC gutter space requirement.

① Power cables must enter and leave from opposite ends (through feed).

## Standards

Series C<sup>®</sup> molded case circuit breakers are designed to conform with the following standards:

- Underwriters Laboratories, Inc., Standard UL 489, Molded Case Circuit Breakers and Circuit Breaker Enclosures
- National Electrical Manufacturers Association Standards Publication No. AB1-1993, Molded Case Circuit Breakers
- Australian Standard AS 2184, Molded Case Circuit Breakers
- British Standards Institution Standard BS 4752: Part 1, Switchgear and Control Gear Part 1: Circuit Breakers
- Canadian Standards Association Standard C22.2 No. 5, Service Entrance and Branch Circuit Breakers
- International Electrotechnical Commission Recommendations IEC 157-1, Circuit Breakers
- Japanese T-Mark Standard Molded Case Circuit Breakers
- South African Bureau of Standards, Standard SABS 156, Standard Specification for Molded Case Circuit Breakers
- Swiss Electro-Technical Association Standard SEV 157-1, Safety Regulations for Circuit Breakers
- Union Technique de l'Electricite Standard NF C 63-120, Low Voltage Switchgear and Control Gear Circuit Breaker Requirements
- Verband Deutscher Elektrotechniker (Association of German Electrical Engineers) Standard VDE 0660, Low Voltage Switchgear and Control Gear, Circuit Breakers

Conformance with these standards satisfies most local and international codes, assuming user acceptability and simplified application.

Series C molded case circuit breakers equal or exceed Federal Specification Classification W-C-375b requirements for the particular class associated with the circuit breaker frame being considered.

## Further Information

Circuit Breaker  
CD-ROM SA.74A.01.T.E

## Navigation Chart of CD-ROM

## System Requirements

- Processor: 486 or faster (Pentium® or Pentium Pro recommended)
- Operating System: Microsoft Windows 95, Windows 98, Windows NT 3.5, or Windows NT 4.0
- Memory: 8 MB of available RAM (16 MB recommended)
- Available Hard Disk Storage Space: 12 MB
- Devices: a CD-ROM drive and a mouse
- Monitor: minimum 640 x 480 resolution and 8-bit color (256 colors)

## Installation Instructions

- This is an autorun CD. Just insert this disk in the CD-ROM drive and wait for it to launch.

CD-ROM Installation Help Line: U.S.: 1-800-270-5134  
Outside of the United States: Contact your local Cutler-Hammer sales office.

If the CD is not included in this Product Guide, contact Cutler-Hammer Fulfillment Center at 1-800-957-7050 and ask for SA.74A.01.T.E.

Circuit Breaker Type Codes: P Plug-in; B Bolt-on; C Cable-in/Cable-out; GF Ground Fault, 5 ma; GFEP Ground Fault, 30 ma.

For Types SPCL and SPHM Supplementary Protectors, see pages 20 and 23.

For Types GHBS and GBHS Solenoid-operated, Remote-controlled Circuit Breakers, see page 14.

① QUICKLAG circuit breakers are suitable for application in relative humidity 0-95% non-condensating.

② Two-pole dc interrupting ratings based on 2 poles connected in series.

③ 62.5 Vac interrupting rating is 3800 AIC 10-50 amperes and 2500 AIC 55-100 amperes continuous.

① N.I.T. is non-interchangeable trip unit and I.T. is interchangeable trip unit.

② Two-pole circuit breaker, or two poles of three-pole circuit breaker at 250 Vdc.

③ Not defined in W-C-375b.

① N.I.T. is non-interchangeable trip unit and I.T. is interchangeable trip unit.

② Two-pole circuit breaker, or two poles of three-pole circuit breaker at 250 Vdc.

QUICKLAG Industrial Circuit Breakers Plug-on

Description

Built and Listed to UL 489

QUICKLAG Circuit Breakers  
Plug-on Type

- Type HQP: 10-150 Amperes, 10,000 AIC
- Type QPHW: 15-125 Amperes, 22,000 AIC
- Type QHPX: 15-100 Amperes, 42,000 AIC
- Type QHPW: 15-30 Amperes, 65,000 AIC

QUICKLAG Type HQP 1-Pole

QUICKLAG Type HQP 2-Pole

QUICKLAG Type HQP 3-Pole

① All products UL and CSA listed.  
 ② All products 15-100A are HACR rated.  
 ③ Switching duty rated for 120 Vac fluorescent light applications.  
 ④ For special low-magnetic breaker order HQP1015L1 or HQP1020L1

**QUICKLAG Industrial Ground Fault Circuit Breakers and Equipment Protectors Plug-on**

## Description

### Plug-on Type

Built and Listed to UL 489

### QUICKLAG Ground Fault Circuit Breakers, Class A GFCI

Built and Tested to UL 943

### 5mA Trip Sensitivity

Type QPGF: 15-50 Amperes,  
10,000 AIC

Type QPHGF: 15-30 Amperes,  
22,000 AIC

### QUICKLAG Ground Fault Equipment Protectors

Built and Listed to UL 1053

### 30mA Trip Sensitivity

Type QPGFEP: 15-50 Amperes,  
10,000 AIC

Type QPHGFEP: 15-30 Amperes,  
22,000 AIC

QUICKLAG Type QPGF 1-Pole Ground Fault Circuit Breaker

QUICKLAG Type QPGF 2-Pole Ground Fault Circuit Breaker

### Shipping Data

Shipped individually or in carton quantities.

Poles	Carton Quantity	Approximate Weight Lbs. (Kgs)	Dimensions Inches (mm)
1	20	11.000 (4.99)	12.500 (317.50) x 6.500 (165.10) x 5.000 (127.00)
2	5	5.000 (2.29)	15.500 (393.70) x 6.000 (152.40) x 4.500 (114.30)

3	8	9.000 (4.09)	12.500 (317.50) x 7.500 (190.50) x 5.000 (127.00)

- ① All products UL and CSA listed.
- ② All products 15-100A are HACR rated.
- ③ Switching duty rated for 120 Vac fluorescent light applications.
- ④ For special low-magnetic breaker order BAB1015L1 or BAB1020L1.

## QUICKLAG Industrial Ground Fault Circuit Protectors Bolt-on

### Description

**Bolt-on Type**

**Built and Listed to UL 489**

**QUICKLAG Ground Fault Circuit Breakers, Class A GFCI**

**Built and Tested to UL 943**

**5mA Trip Sensitivity**

Type QBGF: 15-50 Amperes,  
10,000 AIC

Type QBHGF: 15-30 Amperes,  
22,000 AIC

**QUICKLAG Ground Fault Equipment Protectors**

**Built and Tested to UL 1053**

**30mA Trip Sensitivity**

Type QBGFEP: 15-50 Amperes,  
10,000 AIC

Type QBHGFEP: 15-30 Amperes,  
22,000 AIC

*QUICKLAG Type QBGF 1-Pole Ground Fault Circuit Breaker*

*QUICKLAG Type QBGF 2-Pole Ground Fault Circuit Breaker*

### Bell Alarm and Auxiliary Contact Schematic

Single-throw double-pole contacts are UL and CSA listed for 5 Amperes at 250 Vac.

Bell Alarm (W1) – contacts change state when breaker trips.

Auxiliary Switch (W2) – contacts change state when breaker is opened (or tripped) or closed. 14-inch long #18 AWG pigtail wire leads provided.

## QUICKLAG Industrial Circuit Breakers Cable-in/Cable-out (1/2 inch per pole)

### Description

#### Built and Listed to UL 489

Type QCR and QCF Circuit Breakers are UL listed Circuit Breakers that are suitable for use as branch circuit protectors.

### Applications

QCR and QCF Circuit Breakers are only 1/2-inch wide per pole and are excellent for general purpose industrial applications where space savings is required.

### Product Features and Ratings

- 1/2-inch wide per pole
- Cable-in/Cable-out
- Black cases with black handles
- Three position handle: ON, Tripped (center), OFF
- Thermal-Magnetic Protection
- UL File E7819
- CSA File LR48907
- One, two and three pole
- 10 kAIC at 120/240 Vac, 10-60 Amperes
- 22 kAIC at 120/240 Vac, 15-20 Amperes
- 10 kAIC at 240 Vac, 10-30 Amperes
- 3 kAIC at 62.5 Vdc (1 Pole)
- 3 kAIC at 130 Vdc (2 Poles in Series)
- Normal Operating Environment:  
0-40°C  
5-95% Humidity  
(Non-Condensating)

### Additional Ratings

In addition to the ratings shown for the 1/2-inch wide QCR and QCF, the complete QC breaker line includes:

- 1-4 Poles
- 5-100 Amperes
- 10 through 65 kAIC
- 120/240 and 240 Vac
- 1-inch per pole

1-Pole 2-Pole  
QCR (Rear-Mounted Breakers)

1-Pole 2-Pole  
QCF (Front-Mounted Breakers)

3-Pole  
QCR (Rear-Mounted Breakers)

3-Pole  
QCF (Front-Mounted Breakers)

Type QCR have as a standard feature provisions for 35mm DIN-Rail rear mounting with a spring-loaded rear mounting. Optional clips for individual mounting are available as a separate accessory.

Type QCF have two threaded steel inserts to facilitate front mounting with #6-32 steel screws. The clamp type terminals accessible from the rear of the breaker so that cables can be accessed without removal of the breaker from the front cover.

QCR 1-Pole Breaker with QCRMTGFT Clips (Qty. 2) Individually Mounted

QCF Breaker Front Panel Mounted

Available QCR and QCF Breaker Accessories

Catalog Number	Description
QCRMTGFT	Steel mounting clip mounts QCR breaker if individual mounting is required. Quantity two required for 1- and 2-pole and four required for 3-pole breakers.
QCRFPL1P	Removable padlock device for single-pole QCR or QCF breaker.
QCRFPLMP	Removable padlock device for multi-pole QCR or QCF breaker.
QCRFLOFF	Padlock bracket assembly for QCR or QCF single or multi-pole breakers (off only).

- ① Standard breaker terminals are box type lugs.
- ② Breakers with "T" Catalog Number Suffix are suitable for line and load side ring terminal connection (#10-32 plus/minus terminal screw provided).
- ③ Breakers with "P" Catalog Number Suffix are suitable for terminating 2 #10 AWG Quick-Connect Type Terminals per phase on breaker load side.
- ④ Breakers with Shunt Trip Attachment (extra pole required on breaker right-hand side) are available. Contact Cutler-Hammer.
- ⑤ All ratings 15 to 60 amperes are HACR rated.
- ⑥ Breakers with "H" Catalog Suffix have 240 Vac construction.
- ⑦ All 15 and 20 ampere single-pole breakers are SWD (Switching Duty) rated for fluorescent lighting applications.
- ⑧ 60/75°C Cu/Al wire on all ratings except 60 amperes which requires Cu only conductor.

QUICKLAG Industrial Circuit Breakers Cable-in/Cable-out (1/2 inch per pole)

QCR and QCF Breaker Factory Installed Terminals

**QCR and QCF Standard Box Terminals**

Factory installed line and load side breaker terminal to accommodate #14 AWG to #4 AWG wire.

**QCR Quick-Connect Terminals**

Factory installed two-prong quick-connect terminal on breaker load side suitable for terminating two #10 AWG wire with insulated slip-on terminals as shown. Line side terminal is the standard type.

Catalog Suffix "P"

**QCR and QCF Ring or Spade Lug Terminals**

(10 to 30 ampere ratings only): Factory installed line and load side terminals each equipped with a #10-32 screw suitable for terminating one #10 AWG wire with insulated ring or spade type terminal as shown.

Catalog Suffix "T"

① All products UL and CSA listed.

## Types GHBS and GBHS Solenoid-Operated, Remote-Controlled

### Description

GHBS and GBHS circuit breakers are bolt-on branch circuit breakers designed for use in panelboards and are ideally suited for lighting control applications. In addition to providing conventional branch circuit protection, they include a unique solenoid-operated mechanism that provides for efficient breaker pulse-on and pulse-off operation when used with a suitable controller like the Cutler-Hammer Pow-R-Command lighting control system.

### Product Features

- Bolt-on Line-Side Terminal
- Cable Connected Load-Side Terminal
- 3-Prong Control Terminal (Common, Solenoid, Auxiliary Switch)
- Bi-Metal Assembly for Thermal Overload Protection
- Fast Acting Short Circuit Protection
- Arc-Runner and Arc-Chute Assembly for Fast Acting Arc Extinction
- Three Position Handle: OFF, TRIP (Center), ON
- Handle in "ON" Position Enables Remote Control
- Handle in "OFF" Position Disables Remote Control
- Handle Permits Manual Switching When Control Power is Lost
- Mechanical Trip Indicator Window (Red-ON, Green-OFF/TRIPPED)
- 15 and 20 Ampere Breakers SWD (Switching Duty) Rated
- HID Ratings for HID (High Intensity Discharge) Lighting
- Auxiliary Switch for Control Circuit Feedback

1-Pole

2-Pole

### GHBS UL 489 Interrupting Ratings

Circuit Breaker Type <sup>①</sup>	Number of Poles	Interrupting Capacity (Symmetrical Amperes)	Rating Amperes <sup>②</sup>		
			Volts Ac (50/60 Hz)		
			120	240	277/480
GHBS1015D	1	15	65,000	—	14,000
GHBS1020D	1	20	65,000	—	14,000
GHBS1030D	1	30	65,000	—	14,000
GHBS2015D	2	15	—	65,000	14,000
GHBS2020D	2	20	—	65,000	14,000
GHBS2030D	2	30	—	65,000	14,000

Instruction Leaflet/FRED Number 15546

### GBHS CSA 22.2 Interrupting Ratings

Circuit Breaker Type	Number of Poles	Interrupting Capacity (Symmetrical Amperes)	Rating Amperes <sup>②</sup>	
			Volts Ac (50/60 Hz)	
			347/600	
GBHS1015D	1	15	10,000	
GBHS1020D	1	20	10,000	
GBHS2015D	2	15	10,000	
GBHS2020D	2	20	10,000	

15-20 Amperes

30 Amperes

### Terminal Type

For load-side. Terminals are UL listed as suitable for wire type and size given below.

Circuit Breaker Amperes	Terminal Type	Screw Head Type	Wire Type	AWG Wire Range
15-20	Clamp	Slotted	Cu/Al	#14-#10
30	Box	Slotted	Cu/Al	#14-#2

### Dimensions Per Pole, Inches (mm)

Width	Height	Depth
1.000 (25.40)	4.125 (104.78)	2.810 (71.37)

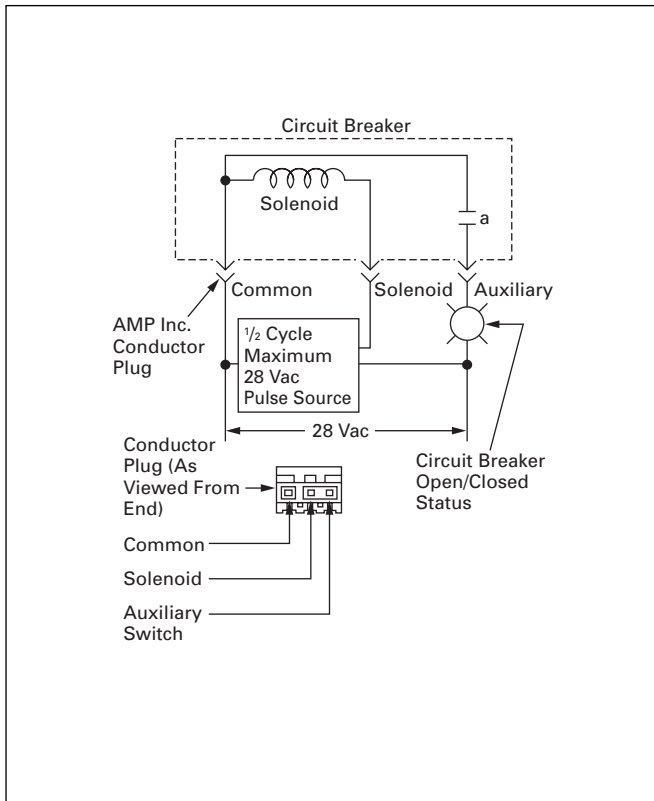

Dimensions in parentheses in millimeters.

① All UL listed circuit breakers are HID (High Intensity Discharge) rated.

② Continuous current rating at 40°C.

Wiring Diagrams

Typical Single-Pole Circuit Breaker Schematic Diagram and Conductor Plug Wiring Connections

Circuit Breaker Schematic Diagram and Conductor Plug Wiring Connections for 2-Pole

Remote Control Operation

The remote-control capability of the breaker is "armed" when the breaker handle is manually switched to the "ON" position. Once armed, the breaker can be pulsed "ON" and "OFF" by a controller device which provides an ac pulse of specified magnitude and duration to the solenoid operated mechanism. Control connections to the breaker are provided through a male conductor plug (supplied by others) which

snaps into the female connector provided with the breaker. A normally open (a) auxiliary contact provides for breaker "ON"/"OFF" status indication to the remote controller and/or indicating lamp. The remote-control capability of the breaker is "disarmed" when the breaker handle is in the "OFF" or "TRIPPED" position. In the event the breaker automatically trips, the breaker must be reset manually.

Breaker Solenoid and Operating Data

- Ambient Temperature: 0-40° C
- Nominal Pulse Magnitude: 28 volts ac RMS
- Tolerance: +10% to -15% of Nominal Voltage
- Pulse Duration: 1/2 cycle (8-10 ms)
- Minimum Recommended Pulse Current at Nominal Voltage:
  - 1-Pole: 4.9 Amperes Peak, 3.5 Amperes RMS
  - 2-Pole: 7.84 Amperes Peak, 5.6 Amperes RMS
- Breaker Operating Time: 20-40 ms
- Maximum Breaker Cycling: 6 Operations per Minute
- Humidity: 0-95% non-Condensing

**Description**

**QUICKLAG Switching Neutral Circuit Breakers**

Plug-on Type HQP: 10-30 Amperes, 1 and 2 Poles, 10,000 AIC  
 Bolt-on Type BA: 10-30 Amperes, 1 and 2 Poles, 10,000 AIC  
 Cable-in Type QC: 10-30 Amperes, 1 and 2 Poles, 10,000 AIC

Switching Neutral QUICKLAG Breakers available in one- and two-pole configurations, plus neutral pole for applications in accordance with NEC 514-5, 240-22, and 380-2. A one-pole device takes two pole spaces, and a two-pole device takes three pole spaces.

QUICKLAG Type P Switching Neutral

**QUICKLAG HID (High Intensity Discharge) Breakers**

Plug-on Type HQP: 15-60 Amperes, 1 and 2 Poles, 10,000 AIC  
 Bolt-on Type BA: 15-60 Amperes, 1 and 2 Poles, 10,000 AIC  
 Cable-in Type QC: 15-60 Amperes, 1 and 2 Poles, 10,000 AIC

Breakers designed specifically for use with high intensity discharge (HID) lighting applications. (UL listed as standard lighting breakers.)

**Molded Case Switches Non-Automatic QUICKLAG Molded Case Switch**

Plug-on Type HQP: 50, 60, 100 Amperes, 1, 2 and 3 Poles  
 Bolt-on Type BA: 50, 60, 100 Amperes, 1, 2 and 3 Poles  
 Cable-in Type QC: 50, 60, 100 Amperes, 1, 2 and 3 Poles

## Supplementary Protectors Current Limiting Type Cable-in/Cable-out DIN Rail

### Description

#### UL 1077 Supplementary Protectors

Type SPCL Supplementary Protectors are IEC circuit breakers that are recognized by UL under UL 1077. They are intended for use as over-current protection within an appliance or electrical equipment where branch circuit protection (for example a UL listed Molded Case Circuit Breaker) has already been provided or is not required.

#### Equipment and Control Circuit Protection

These protectors are ideal for replacing fuses in control circuits. Applications include protecting motor control circuits, small control circuit transformers, relays, contactor coils, power supplies, PLC I/O points, appliances, and electronic equipment.

### Product Features

The Type SPCL Supplementary Protectors are provided in light gray cases with charcoal gray handles.

**DIN-Rail Mounting:** A quick snap-on clip design allows easy installation on 35mm DIN Rail.

**Current-Limiting Design:** Fast short circuit interruption reduces let-through energy, reducing damage to the circuit.

#### Thermal-Magnetic Overcurrent

**Protection:** Types B and C overcurrent curves provide maximum reliability and accuracy. Type B protection is normally used for low inrush applications. Type C protection is used for general purpose industrial applications that require higher inrush tolerance.

**Center Trip Position:** The breaker handle has a unique center trip "Reset" position that indicates an overcurrent trip. "Off" (O) and "On" (I) handle positions are visually indicated by red and green flags.

SPCL protectors carry the CE mark in accordance with Low Voltage Directive (LVD) (73/23/EEC)

**SPCL Accessories**

**Auxiliary/Signal Switch Kit**

Catalog Number SPCLUAUX is a field mountable switch kit that attaches to the left side of a SPCL Protector. It is field selectable to auxiliary or signal (bell alarm) configuration. The switch is UL and CSA approved for general purpose ratings of 6 ampere at 240 Vac or 1 ampere at 125 Vdc. Contacts are provided as indicated on the wiring diagram. Screw-type terminals are provided to accommodate up to #16 AWG wire. Recommended torque is approximately 13 inch-pounds.

**Contact Charts**

**Description**

**UL 1077 Supplementary Protectors**  
Type SPHM Supplementary Protectors are IEC circuit breakers that are recognized by UL under UL 1077. They are intended for use as over-current protection within an appliance or electrical equipment where branch circuit protection (for example a UL listed Molded Case Circuit Breaker) has already been provided or is not required.

**Equipment and Control Circuit Applications**

These protectors are ideal for protecting motor control circuits, CPTs, relays, contactor coils, power supplies, PLC I/O points, lighting circuits, appliances, electronic equipment, and replacing fuses.

**Product Features**

The Type SPHM Supplementary Protectors are provided in light gray cases with charcoal gray handles. Handles are marked with "O" for "Off" and "I" for "On".

**DIN Rail Mounting:** Easy installation on 35mm DIN Rail. A spring loaded clip is provided for quick release from the DIN Rail mounting.

**Heat-Induced Nuisance Tripping Eliminated:** The protector is designed to "hold in" at 100% of continuous rated current regardless of ambient temperatures from -40 to +85°C.

**Immediate Reset After Trip:** The protector can be reset (closed) immediately after an overcurrent trip without a "cooling off" period.

**Precise Overcurrent Calibration:** The protector can be precisely calibrated to a wide variety of current ranges from 0.1 to 50 amperes continuous. For special ratings not shown, contact Cutler-Hammer.

**Flexible Time-Characteristic Curves:** Long, Medium, and Short Delay Curves are available. Long Delay are for special extended inrush, Medium

① One A or B contact maximum per pole. Contacts will be arranged left to right (e.g.,) BAB suffix on 3-pole breaker.  
② Contact position when breaker in open condition. Contacts rated 10 amperes at 250 Vac.  
③ UL recognized to 250 Vac, 5 kA above 30 amperes.  
④ Maximum of 40 amperes available at 25X inrush.

**Catalog Numbering System**

**General Specifications and Electrical Ratings**

Standards and Approvals	Continuous Current Rating	Vac 50/60 Hz	Vdc	Interruption Cap Capacity RMS Symmetrical
UL 1077	0.1 to 30 Amperes	277/480		3 kA
	0.1 to 50 Amperes	250		5 kA
CSA 22.2	0.1 to 50 Amperes		80	5 kA
VDE 0660	0.1 to 50 Amperes	230/400		1.5 kA
IEC-380	0.1 to 50 Amperes		80	2 kA

for general purpose, and Short Delay for sensitive electronic applications.

**1/2 Cycle High-Inrush Tolerance:** The protector can be provided with tolerance to various levels of 1/2 cycle current spikes. General purpose tolerance is 8X the continuous current rating. Tolerance to 18X and 25X are also available.

**Environmental, Vibration, and Shock Resistance:** Mil-Spec qualification for fungus resistance, humidity, salt-spray resistance, and shock vibration resistance.

**Integral Auxiliary Switch (Optional):** One auxiliary switch contact (a or b) can be factory installed per protector pole. A separate pole for the contact is not required.

**Standards:** UL Recognized under UL 1077, CSA Certified to CSA 22.2. Meets the requirements of IEC-380, IEC-435, IEC-601, VDE 0660, VDE 601, VDE 0730, VDE 0750, VDE 0804, VDE 0806

**Inrush Tolerance:** 8X (Standard), 18X, or 25X

**Overcurrent Curves:** Long Delay, Medium Delay, or Short Delay

**Operating Temperature:** -40 to +85°C

**Wire Range:** Breaker Terminals: 14-6 AWG Copper, 35-inch-lbs torque  
Auxiliary Switch Terminals: 16 AWG Copper, 3.5-inch-lbs torque

**Auxiliary Switch:** 10 Amperes at 250 Vac

**Degree of Protection:** IP-20

Series C® G-Frame

- All two- and three-pole circuit breakers are of the common trip type. On all 3-phase Delta (240V) Grounded B phase applications, refer to Cutler-Hammer.
- Single-pole circuit breakers, 15 and 20 amperes. Switching duty rated (SWD) for fluorescent lighting applications.
- All G-frame circuit breakers are suitable for reverse feed use.
- HACR rated.

Series C® G-Frame

Types GB and GHB Bolt-On Panelboard Circuit Breakers

Typical GB

These breakers meet the requirements of Federal Specification W-C-375b as follows:

Types GB, GHB, 120 and 240 Volts:

- 1 Pole: Class 11a.
- 2, 3 Poles: Classes 10b, 11b, 12b, 14b, 15b

Type GHB, 277 and 480Y/277 Volts:

- 1 Pole: Classes 12c, 13a
- 2, 3 Poles: Class 13b

Type GHBGFEP Bolt-on Panelboard 30mA Industrial Ground Fault Circuit Protectors

15-60 Amperes, 277 Volt, 50/60 Hz

Single Phase  
(Requires 2 Poles)

These circuit breakers meet the requirements of UL489 and UL1053.

Operational voltage 240V to 305V.

Interrupting Capacity Ratings

- ① 15 through 70 ampere circuit breakers only.
- ② Use (2) outside poles.
- ③ Uses .190-32 screw type clamp terminals.
- ④ 480Y/277V, circuit breakers (Type GHB) not suitable for 3-phase Delta (480V).

## Series C® G-Frame

## Types GC and GHC Circuit Breakers

15-100 Amperes, 120, 240, 277, 480Y/277V, 50/60 Hz, 125, 125/250 Vdc, 1, 2, and 3 Poles

Typical GC

These breakers meet the requirements of Federal Specification W-C-37b as follows:

Types GC, 120 and 240 Volts:

- 1 Pole: Class 11a
- 2, 3 Poles: Classes 10b, 11b, 12b, 14b, 15b

Type GHC, 277 and 480Y/277 Volts:

- 1 Pole: Classes 12c, 13a
- 2, 3 Poles: Class 13b

Series C® F-Frame

Typical Series C F-Frame Breaker

- All Series C F-frame circuit breakers are HACR rated.
- All circuit breakers 10 through 50 amperes are suitable for HID (high intensity discharge) use.
- All F-frame circuit breakers are suitable for reverse feed use.

Instruction Leaflet/FRED Number 29C101

**Series C® F-Frame**

**Line and Load Terminals**

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. Except as noted, terminals comply with Underwriters Laboratories, Inc., Standards UL486A and UL486B. Unless otherwise specified, F-frame circuit breakers

are factory equipped with load terminals only.

**Ordering Information**

F-frame circuit breakers and molded case switches have load terminals only as standard equipment. When standard line-end terminals (same as

standard load-end terminals) are required, add suffix L to the circuit breaker catalog number. When non-standard or optional line and/or load terminals are required, order by style number. Specify if factory installation is required.

**Line and Load Terminals**

Assemble wire clamp to bottom of conductor as shown.

Insert collar enclosing conductor as shown. Locate nut on top of conductor and tighten securely with screw and washer. Caution: Collar must surround conductor.

Insert collar enclosing conductor and center on extrusion on collar. Install clip with legs on top of conductor and snap end around bottom of collar.

Assemble collar on top of conductor as shown. Tighten securely with screw and washer.

Collar slides onto conductor and is held in position by a screw and lockwasher.

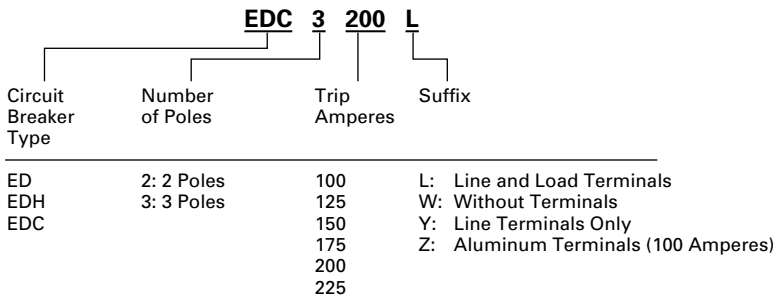

Assemble collar on top of conductor as shown. Tighten securely with screw and washer. Terminal shield must be used with this collar.

① Not for use with ED, EDH, EDC breakers.  
② Includes terminal shield kit. Adds approximately 3 inches to breaker height. Available for use on 3-pole breaker only.

Instruction Leaflet/FRED Number 29C104 for Breaker; 29C614 for Electronic Trip Unit

① Ampere rating is established by rating plug.  
 ② For Ac use only.  
 ③ 3-pole KES Trip Units are for use in 3-pole frames only.  
 ④ Individually packed.

⑤ 3TA400K and 4TA400K terminal kits contain one terminal for each pole and one terminal cover.  
 ⑥ Trip unit includes protected neutral pole. Use corresponding 3-pole trip unit if protected neutral pole is not required.

⑦ Fully rated neutral pole protection is standard. For 50% rated protection on neutral pole, add suffix E to 4-pole trip unit catalog number.

**Molded Case Switches**

Molded case switches are used as compact switches in applications requiring high current switching capabilities. Molded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Molded case switches are listed in accordance with Underwriters Laboratories, Inc., Standard UL 1087.

① Long delay  $I^4t$  response selection limits short delay time to flat response.

Series C® K-Frame

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories, Inc., Standards UL486A and UL486B

and CSA Standard C22.2 No. 65, or Electrical Bulletin 1165. Unless otherwise specified, K-frame circuit breaker line and load terminals are shipped separately for field installation.

Ordering Information

K-frame circuit breakers use Cu/Al terminals as standard. When optional copper or Cu/Al terminals are required, order by catalog number. Specify if factory installation is required.

Series C® L-Frame

Typical Series C L-Frame Circuit Breaker

- All Series C L-frame circuit breakers are HACR rated.
- L-frame circuit breakers are available as individual components (Frame, Trip Unit, Terminals), or factory assembled complete breakers. OPTIM circuit breakers are available as factory assembled only.
- L-frame circuit breakers with non-interchangeable trip units are suitable for reverse feed use.

Series C® L-Frame

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories, Inc., Standards UL486A and UL486B and CSA Standard C22.2 No. 65M. Unless otherwise specified, L-frame circuit breaker line and load terminals are shipped separately for field installation.

The wire connecting terminal is secured with two pan-head, slotted screws and lock washers which can be checked for the correct torque loading or retightened from the front of the circuit breaker before installation of the conductors. (Applies to all styles.) The circuit breaker line/load terminal conductors are positioned in the conducting holes in the wire connecting terminal

and are secured with recessed socket screws which are tightened to the correct torque loading from the front of the circuit breaker.

Ordering Information

L-frame circuit breakers use Cu/Al terminals as standard. When optional copper terminals are required, order by catalog number. Specify if factory installation is required.

□ May be mounted on left or right pole – not both

● Accessory available/Modification available

① 2-pole breaker supplied in 3-pole frame. Current carrying parts omitted from center pole.

② Refer to Cutler-Hammer for appropriate neutral pole accessory combinations.

③ OPTIM models 750 and 1050 are factory sealed and do not have the right pole space available for accessories.

④ Shunt trip and UVR cannot be mounted in right poles on LES trip units.

Series C® M-Frame

Typical Series C M-Frame Circuit Breaker

- All Series C M-frame circuit breakers are HACR rated.
- MDL-frame circuit breakers are available as individual components (Frame, Trip Unit, Terminals), or factory assembled complete breakers.
- M-frame circuit breakers with non-interchangeable trip units are suitable for reverse feed use.

Interrupting Capacity Ratings

UL489/CSA Interrupting Capacity Ratings<sup>①</sup>

Circuit Breaker Type	Number of Poles	Interrupting Capacity (Symmetrical Amperes) (kA)				Page Number
		Volts Ac (50/60 Hz)			Volts Dc <sup>②③</sup>	
		240	480	600

CHMDL	2, 3	100	65	35	25	70

IEC 947-2 Interrupting Capacity Ratings<sup>①</sup>

Circuit Breaker Type	Number of Poles	Interrupting Capacity – RMS Symmetrical Amperes (kA) $I_{CU} = I_{CS}$				Page Number
		Volts Ac (50/60 Hz)			Volts Dc <sup>②③</sup>	
		240	480	600		
MDL	2, 3	85	50	20	20	69, 70
CMDL	2, 3	85	50	20	20	70
HMDL	2, 3	100	65	25	20	69, 70
CHMDL	2, 3	100	65	25	20	70

① Utilization category A circuit breakers.  
 ② Two poles or two poles of 3-pole circuit breaker. Thermal-magnetic trip units only, MDL, HMDL breakers with electronic trip unit are not DC rated.  
 ③ Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds at 22 kA.

### 100% Rated Types CMDL and CHMDL Electronic Circuit Breakers with Non-Interchangeable Trip Units

The NEC allows the breaker to be rated at 100% of its frame size in an assembly, provided that 90°C wire is applied at the 75°C ampacity. All 100% rated circuit breakers have electronic trip units. Order as individual components: breaker frame, trip unit, rating plug and terminals.

① Ampere rating is established by rating plug.

② For Ac use only.

**Molded Case Switches**

Molded case switches are used as compact switches in applications requiring high current switching capabilities. Molded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Molded case switches are listed in accordance with Underwriters Laboratories, Inc., Standard UL 1087.

	–	ND312WK	ND412WK

**Note:** Molded case switch may trip above 14,000 amperes.

For UL listed, series tested molded case switch application data, refer to Cutler-Hammer.

Instruction Leaflet/FRED Number 29C106

**Line and Load Terminals**

**Ordering Information**

N-frame circuit breakers use Cu/Al terminals as standard. When optional copper or Cu/Al terminals are required, order by catalog number. Specify if factory installation is required.

**Line and Load Terminals**

Maximum Breaker Amperes	Terminal Body Material	Wire Type	AWG Wire Range/No. Conductors	Metric Wire Range mm <sup>2</sup>	Catalog Number
<b>Standard Cu/Al Pressure Terminals</b>					
700	Aluminum	Cu/Al	(2) 1-500 kcmil	50-300	TA700NB1
1000	Aluminum	Cu/Al	(3) 3/0-400 kcmil	95-185	TA1000NB1 <sup>②</sup>

**Note:** Molded case switch may trip above 17500 amperes.

Instruction Leaflet/FRED Number 29C106 for Molded Case Switch

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories, Inc. Standards UL486A and UL486B and CSA C22.2 No. 65M. Unless otherwise specified, R-frame

circuit breaker line load terminals are shipped separately for field installation.

Ordering Information

R-frame circuit breakers have Cu/Al terminals as standard and Cu only terminals as an option. Specify if factory installation is required.

Series C Motor Circuit Protectors

**General Information**

Designated as the Cutler-Hammer Types GMCP, HMCP, the Series C instantaneous-only motor circuit protector (MCP) is available in ratings from 3A to 600A for motor starter sizes 0 through 6. The MCP is designed to comply with the applicable requirements of Underwriters Laboratories, Inc. Standard UL489, Canadian Standards Association Standard C22.2 No. 5, and International Electrotechnical Commission Recommendations IEC 157-1.

An innovative design of internal components allows higher MCP-starter combination interrupting ratings. The MCP is marked to permit proper electrical application within the assigned equipment ratings.

The MCP is a recognized component (UL File E7819) and complies with the applicable requirements of Underwriters Laboratories, Inc. Standard UL489. It is also designed to comply with the applicable requirements of Canadian Standards Association Standard C22.2 No. 5, International Electrotechnical Commission Recommendations IEC 157-1, and nameplates bear the CE marking.

**Catalog Numbering System**

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

Instruction Leaflet/FRED Number 15550 for Shunt Trip

### External Mounted Accessories

Description	Number Units in Package	Style Number
Lock Dog (Non-Padlockable)	1	1294C01H01
Mounting Hardware	1	624B375G23
DIN Rail Adapter <sup>②</sup>	10	1225C79G02

Instruction Leaflet/FRED Number 29C191 (DIN Rail Adapter)

### Vari-Depth Handle Mechanism<sup>⑥</sup>

Description	Catalog Number
For Type 1 use	HRGMV11L
For Type 3R, 4X, 12 use	HRGMV14L
Close Coupled Black with Gray Handle	HRGMC10
Close Coupled Red with Yellow Handle	HRGMC30

① Only one accessory may be installed in GMCP.

② For use with standard 35 mm DIN rail such as, 35 x 7.5 or 15 mm per DIN EN50022.

③ LH only.

④ RH only.

⑤ Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown. Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.

⑥ For use with GMCP only.

- ① Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown. Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.
- ② For Dc applications, actual trip levels are approximately 40% higher than values shown.
- ③ Settings above 130 amperes are for special applications. NEC Article 430-110(a) requires the ampere rating of the disconnecting means to be not less than 115% of the motor full load ampere rating.

## Type ELC Current Limiter Attachment (Size 0-4)

The type ELC current limiter attachment for the Series C MCP is designed to provide increased interrupting capacity. The combination may be used for the application up to 200,000A symmetrical at 600 Vac making the MCP suitable for use in network distribution systems or other applications where unusually high fault currents are available. The current limiter connects to the load end of the MCP and is provided with terminals suitable for copper or aluminum conductors. (See table).

Limiters are coordinated with the MCP so that normal fault currents are interrupted automatically by the MCP without any damage to the limiter. Only the rare very high fault is opened by the limiter. Faults that are interrupted by the limiter are interrupted by the limiter also magnetically trip the MCP, opening all three poles, preventing single-phase operation.

Each of the three poles of the type ELC limiter is equipped with an indicator that extends when a fault is interrupted by the limiter.

### Type ELC Current Limiter Terminal Wire Sizes<sup>④</sup>

Type ELC Current Limiter Maximum Amperes	Standard Aluminum Terminals		Nonstandard Terminals (Steel)

Instruction Leaflet/FRED Number 29C401

- Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown. Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.
- For Dc applications, actual trip levels are approximately 40% higher than values shown.
- Settings above 130 amperes are for special applications. NEC Article 430-110(a) requires the ampere rating of the disconnecting means to be not less than 115% of the motor full load ampere rating.
- Terminal wire connectors are UL listed for standard stranded wire sizes as defined in UL486A or UL486B.
- Optional on special order for copper cable only.

④ Equipped with electronic trip device.

Typical Series C Earth Leakage Circuit Breaker

## General Information

Series C Earth Leakage Breakers offer superior Class 1 ground fault protection and improved ground fault coordination capability.

Earth leakage ground fault protection differs from other types of systems in its level of sensitivity. The sensitivity of traditional devices is limited by the cumulative error of the residual current sensors and the placement of the phase and neutral conductors inside the current sensor.

Leakage breakers are zero sequence sensing devices. They are factory supplied with a single sensor and ground fault relay built-in. This technique allows for protection sensitivities down to the 30 milliampere level.

Leakage breakers are provided with a full complement of easy adjustments. The ground fault pickup setting is adjustable from 0.03 to 30 amperes in eight steps, and the ground fault time delay setting is adjustable from instantaneous to 2.0 seconds in six steps. When the pickup is set to 30 mA, the time delay setting defaults internally to instantaneous only. Increased selectivity provides for improved coordination with upstream and downstream ground fault devices as well as the flexibility to adjust for transient currents.

## Applications

### Three-Phase, Four-Wire Loads

For three-phase applications with line-to-neutral loads, select 4-pole earth leakage breakers and wire the neutral through the fourth (right) pole.

### Three-Phase, Three-Wire Loads

For applications with only three-phase, three-wire, line-to-line connected loads, select 3-pole earth leakage breakers.

### Single-Phase Loads

For single-phase, two-wire or three-wire applications, use a 3-pole earth leakage breaker and connect all conductors through the breaker.

## Accessories

### Optional Factory Installed Internal Accessories

Earth leakage breakers use the same internal accessories as standard F-, J- and K-Frame Series C Breakers. Internal accessories fit in the right-hand pole space and are available as factory modifications only.

### Optional External Accessories

Series C Earth Leakage Breakers use the same external accessories as the standard F-, J- and K-Frame circuit breakers.

① Package of 3 terminals.

② Package of 4 terminals.

③ 15, 20, 25, and 30 ampere available.

**Type FCL Current Limit-R Thermal-Magnetic Circuit Breakers**

15 to 100 Amperes, 480 Volts Ac  
Non-Interchangeable Trip, Line and  
Load Terminals Included

Type FCL Breaker

**Dimensions / Weights**

**Dimensions, Inches**

Number of Poles	Width	Height	Depth
2-3	4.125 (104.78)	8.75 (222.25)	3.375 (85.73)

**Approximate Shipping Weight, Lbs. (kg)**

2-Pole	9 (4.082)
3-Pole	9 (4.082)

**Listed with Underwriters Laboratories, Inc. except as noted.**

Type FCL breakers are not defined in Federal Specification W-C-375-b.

**Interrupting Capacity Ratings**

Circuit Breaker Type	Volts Ac (50/60 Hz)	Interrupting Capacity (Symmetrical Amperes) (kA)
FCL	240 480	200 150

On all 3-phase Delta, Grounded B phase applications, refer to Cutler-Hammer.

Maximum Continuous Ampere Rating @ 40°C	2-Pole <sup>①</sup>	3-Pole

100	FCL2100L	FCL3100L

**Line and Load Terminals**

Breakers listed include line and load terminals. Terminals are Underwriters Laboratories, Inc. listed for wire sizes and types listed below. When used with aluminum cable, use joint compound. To order optional aluminum terminals, add suffix "Z" to breaker catalog number listed.

Maximum Breaker Amperes	Wire Type	AWG Wire Range
<b>Standard Pressure Terminals</b>		
100	Al/Cu	#14-1/0
<b>Optional Al/Cu Pressure Terminals</b>		
50	Al/Cu	#14-#4
100	Al/Cu	#4-4/0

① 2-pole breakers are supplied in 3-pole frames with current carrying parts omitted from the center pole.

**Type LCL Current Limit-R Electronic Circuit Breakers**

125 to 400 Amperes, 600 Volts Ac with Solid State Trip Units

Type LCL Breaker

**Dimensions / Weights**

**Dimensions, Inches**

Number of Poles	Width	Height	Depth
2-3	16 (406.40)	8.25 (209.56)	4.0625 (103.19)

**Approximate Shipping Weight, Lbs. (kg)**

Standard	
2-Pole	32 (14.515)
3-Pole	32 (14.515)
With Ground Fault	
3-Pole	36 (16.329)

**Listed with Underwriters Laboratories, Inc. except as noted.**

Type LCL breakers are not defined in Federal Specification W-C-375-b.

**Interrupting Capacity Ratings**

Circuit Breaker Type	Volts Ac (50/60 Hz)	Interrupting Capacity (Symmetrical Amperes) (kA)
LCL	240	200
	480	200
	600	100

On all 3-phase Delta, Grounded B phase applications, refer to Cutler-Hammer.

**Standard Breakers 600 Volts Ac, 50/60 Hz**

Complete breaker requires frame, rating plug and terminals

Frame Only			
Poles <sup>①</sup>	Standard (Long Delay, Magnetic Trip and Current Limiting)	Magnetic Only <sup>②</sup> and Current Limiting	Long Delay, Magnetic Trip and Adjustable Short Delay Time (.08-.28 seconds), and Current Limiting

Instruction Leaflet/FRED Number 14551 for Trip Unit and Fuse

**Current Limiters**

Included with breaker, one required per pole.

Application	Catalog Number
Supplied as standard on ratings through 200 amperes.	200LAP08
Supplied as standard on 225 through 400 ampere ratings, optional on lower ratings when a higher "cross-over point" is desired. (Above two limiters replace 800LAP12 formerly supplied as standard on all ratings, 600LAP09 optional on all ratings through 300 amperes, 300LAP05 optional on ratings through 150 amperes, and special rating limiter 1000LAP14.)	400LAP10
Special rating where a higher "cross-over point" is desired on 200 ampere and higher ratings (Replaces limiter 1500LAP20)	500LAP15 ②③

- ① New limiters suitable for replacement in existing breakers by using plug-in conductor from old limiter (instructions included with limiter). Instruction Leaflet/FRED Number 14824
- ② Not listed with Underwriters Laboratories, Inc.
- ③ Protection based on 100,000 ampere maximum fault, 480 volts maximum.
- ④ Set on high side, adjustable to lower limits.

**Terminals<sup>⑤</sup>**

Two terminals are required per pole. Terminals are Underwriters Laboratories, Inc. listed for wire size and type listed below. When used with aluminum conductors, use joint compound. To order optional aluminum terminals, add suffix "Z" to complete breaker catalog number.

Maximum Breaker Amperes	Wire Range, Type, Number of Cables	Terminal Catalog Number

Instruction Leaflet/FRED Number 13771 for Trip Unit and Fuse

**Interrupting Capacity Ratings**

Underwriters Laboratories, Inc. Listed

600 Volts Ac Maximum: 200,000 Amperes Symmetrical

**Based on NEMA Test Procedures**

250 Volts Dc Maximum<sup>①</sup>: 100,000 Amperes.

On all 3-phase Delta, Grounded B phase applications, refer to Cutler-Hammer.

**Current Limiters**

Included with breaker, one required per pole.

Application	Catalog Number
Supplied as standard on ratings through 500 amperes.	500NB12
Supplied as standard on 600 through 800 ampere ratings, optional on lower ratings when a higher "cross-over point" is desired.	800NB20
Above two limiters replace 1000NB14 formerly supplied on ratings up to 600 amperes, 1500NB20 supplied on 700 amperes, and 2500NB25 supplied on 800 amperes.	

**Terminals<sup>②</sup>**

Two terminals are required per pole. Terminals are Underwriters Laboratories, Inc. listed for wire size and type listed below. When used with aluminum conductors, use joint compound. To order optional aluminum terminals, add suffix "Z" to complete breaker catalog number.

Maximum Ampere Rating	Wire Range, Type, Number of Cables	Terminal Catalog Number
350	1 #1-600 kcmil Cu	T350NB
700	2 2/0-500 kcmil Cu	T700NB1
800	3 3/0-500 kcmil Cu	T1000NB1

**Standard Copper Pressure Terminals**

350	1 #1-600 kcmil Cu	T350NB
700	2 2/0-500 kcmil Cu	T700NB1
800	3 3/0-500 kcmil Cu	T1000NB1

**Optional Al/Cu Pressure Terminals**

700	2 #1-500 kcmil Al/Cu	TA700NB1
800	3 3/0-400 kcmil Al/Cu	TA1000NB1
800	3 500-750 kcmil Al/Cu	TA1201NB1

① Dc rating applies to 350 amperes maximum thermal or to magnetic only breakers.  
 ② Shipped separately from breaker  
 ③ 2-pole breakers or trips are supplied in 3-pole frames with current carrying parts omitted from the center pole.  
 ④ 60 Hz Ac only.

**Type PB Tri-Pac Thermal-Magnetic Circuit Breakers**

600 to 1600 Amperes, 600 Volts Ac, 60 Hertz Ac<sup>①</sup>, 250 Volts Dc<sup>②</sup>, 2-, 3- Poles Interchangeable Trip, Replaceable Current Limiters

Type Tri-Pac PB Breaker

**Dimensions / Weights**

**Dimensions, Inches**

Number of Poles	Width	Height	Depth
2-3	12.0625 (306.39)	22.125 (561.98)	9.0625 (230.19)

Included with breaker, one required per pole.

Application	Catalog Number
Supplied as standard on ratings through 1000 amperes. (Replaces limiter 1500PBPR30 formerly supplied on 600 and 700 ampere ratings, and 3000 PBPR27 supplied on 800-1000 ampere ratings.	1000PBPR20
Supplied as standard on 1200 through 1600 ampere ratings. Optional on lower ratings where a higher "cross-over point" is desired. (Replaces limiter 4000PBPR30 formerly supplied on 1200 through 1400 ampere ratings, and 5000PBPR42 supplied on 1600 ampere ratings.	1600PBPR30

**Bus Bar Connectors<sup>⑥</sup>**

**"T" Connector for Cu/Al Bus**

Two required per pole. For rear bus connection. Accepts up to four bus bolts. May be rotated 90°

Catalog Number
BA2000B

**Cable Connector (Optional)**

For "T" connector. Accepts four 600 kcmil copper cables.

Style Number
505C706G04

**Special Breakers<sup>⑥</sup>**

**Magnetic Only Type Tri-Pacs:**  
Available on request.

- ① Higher frequency calibration not available. Minimum of 50 Hz calibration available on special order.
- ② 250 volts Dc rating applies only to magnetic only breakers.
- ③ Shipped separately from breaker.

- ④ Magnetic only trip units are available. Order by description.
- ⑤ 2-pole breakers are supplied in 3-pole frames with current carrying parts omitted from center pole.
- ⑥ Not listed with Underwriters Laboratories, Inc.

### Alarm Switch

For light or alarm indication when breaker trips. Does not function with manual operation. Automatically resets when breaker is related. Standard leads extend 18 inches outside of breaker. Longer leads may be specified. Not field mountable.

Breaker Frame	Normal Pole Meeting	Contact Operation (Specific Type Desired)
FCL	Center	Make or Break
LA Tri-Pac	Left	Make or Break
NB Tri-Pac	Left	Make or Break
PB Tri-Pac	Left	Make or Break
LCL	Left <sup>①</sup>	Make or Break

Alarm Switch Contact Rating (Non Inductive) LA Tri-Pac: 10 amperes, 120 volt Ac; 5A, 240 volt Ac.

### Auxiliary Switch<sup>②</sup>

For auxiliary control circuits. Miniature switches mount within breaker. Commonly used for remote indication of open or closed breaker and electrically interlocking component control circuits. "A" contacts are closed when breaker is closed. "B" contacts are open when breaker is closed. Standard leads extend 18 inches outside of breaker. Longer leads may be specified.

### Factory Mounted Auxiliary Switches<sup>②</sup>

All of the above auxiliary switches can be specified for factory mounting at the same price as listed for the kit. These attachments have the leads out the side of the breaker and are UL listed when factory mounted unless other non UL listed modifications are used (except as noted).

Factory mounted switches only can be supplied for the following breakers: FB Tri-Pac<sup>®</sup>, LA Tri-Pac. Order by description.

- ① When alarm switch is used in conjunction with auxiliary switch, the auxiliary switch is rated 250 volts max., 5 amperes maximum.
- ② Left-hand mounting is standard unless otherwise specified.
- ③ All switches are multiples of 1A-1B with a common electrical connection (See diagram above).
- ④ Field mounting voids UL listing of breaker except on NB Tri-Pac and PB Tri-Pac breakers.
- ⑤ For Dc applications refer to factory.
- ⑥ Right-hand mounting only.

Shunt Trip

For tripping breaker from a remote point. A solenoid device mounts within breaker case. Breaker trips when coil is energized.

Shunt trips should not be used as circuit interlocks using maintained contact pilot devices.

A cutoff switch breaks the circuit to the momentary rated coil when breaker opens. Available for control voltages up to 250 volts Dc or 600 volts Ac. Voltage and frequency must be specified. Standard leads extend 18 inches outside of breaker. Longer leads may be specified.

Shunt Trip Coil Data for Type LCL Current Limiting Breakers

Shunt Trip Voltage Rating	Coil Inrush	
	Amperes	Volt-Amperes
120 Ac	.15	18

- ① 120 volt Ac ratings suitable for 55% pickup for ground fault applications.
- ② Not field mountable on non-automatic breakers (MCS).
- ③ Field mounting voids breakers' UL listing except on NB Tri-Pac and PB Tri-Pac.
- ④ Right-hand mounting only.
- ⑤ Not UL listed.
- ⑥ UL listing pending. Refer to Cutler-Hammer.
- ⑦ Rated 48 volts minimum for ground fault applications.
- ⑧ Also available factory mounted for 24 volt Dc. Order by description.
- ⑨ Not for ground fault.

**Standard Undervoltage Release<sup>①</sup>**

For undervoltage protection. A solenoid device mounts within breaker case. Coil must be energized before closing breaker. Trips breaker when voltage drops below 40 to 60% of coil rating. Picks up and seals in at 80% of coil rating. For line voltages up to 250 volts Dc or 600 volts Ac. Externally mounted resistors are supplied for certain ratings. Standard leads extend 18 inches outside of breaker. Longer leads may be specified.

**Note:** U.V.R. attachments are not designed for, and should not be used as, circuit interlocks. For further information, refer to Cutler-Hammer.

**Factory Mounted Undervoltage Releases<sup>②</sup>**

NB Tri-Pac and PB Tri-Pac undervoltage releases can be specified for factory mounting at the same price as the kit. These attachments have the leads out the side and are UL listed when factory mounted unless other non-UL listed modifications are used.

Factory mounted undervoltage releases only can be supplied for the following breakers: FB Tri-Pac<sup>③</sup>, LA Tri-Pac and FCL; LCL 120 Volts Ac only.<sup>④</sup> Order by description.

Plug-in Adapter Kits

For rear connected applications such as switchboards. Facilitates ease of installation and front removal of breaker. Includes conductor for mounting on breaker, plug-in mounting blocks with matching conductor, rear studs and mounting hardware. Order two mounting blocks style number when line and load are required; order one mounting block style number when either line or load is required.

NB Tri-Pac	1091716
PB Tri-Pac	624375G22

**Moisture-Fungus-Corrosion Treatment<sup>②</sup>**

Treatment can be provided to meet customer's specific atmospheric conditions. Moisture-fungus treating material used meets JAN-T-152; treatment meets MIL-V-173a. Requests and orders should specify government specifications or conditions to be met.

① Not Underwriters Laboratories, Inc. listed. Insulated base with front removeable bolted connection.  
② Included with frame

**Handle Locks<sup>①</sup>**

**Non-Padlockable**

For prevention of unintentional operation of breaker. Fits over breaker handle and may be removed.

**Padlockable**

For prevention of unauthorized operation of breaker. Is non-removable once installed on breaker. Meets Underwriters Laboratories, Inc. and California Code requirements.

**Note:** All breakers are trip free and will trip with handle locks attached. Cannot be used when handle extension is used.

③ Not UL listed.  
④ Not available on drawout breakers.  
⑤ Not available for FCL or LCL breakers.  
⑥ Not available on motor operated breakers.

**Kirk Key Interlock<sup>⑤</sup>**

Availability: FB, LA, NB, PB Tri-Pacs.

Permits interlocking of two breakers or one breaker with other devices. Before breaker can be closed, key must be inserted and turned in breaker interlock. Breaker must be opened before key can be removed. It can then be inserted in interlock or other devices to permit their closure. Requests and orders should completely outline interlocking scheme, ultimate user and his address.

**Mechanical Interlocks<sup>②</sup>**

For mechanically interlocking a pair of breakers so that only one may be closed at one time, but both may be open simultaneously.

**Walking Beam Type<sup>②③④</sup>**

Mounts on panel (not included) at rear of breaker. Standard breaker spacing: LA Tri-Pac, NB Tri-Pac: 8-1/2 inches center to center; FB Tri-Pac: 4-3/8 inches center to center; PB Tri-Pac: 12-1/4 inches center to center. Order as a set of two special factory drilled breakers and one walking beam interlock. Specify breaker type, panel thickness and center-to-center dimension of breakers.

**Sliding Bar Type (Field Mountable)<sup>②⑤</sup>**

Mounts on panel (not included) fitting over front of breakers. Standard breaker spacing: LA Tri-Pac, NB Tri-Pac: 8-1/2 inches; FB Tri-Pac: 4-3/16 inches center to center.

### Motor Operators<sup>①</sup>

Motor operators provide complete remote control by means of a push-button or similar pilot device<sup>②</sup>. Positive switching action is accomplished by use of an operating arm engaging the breaker handle. The unit is energized momentarily to actuate the lever arm moving it to either the "ON" or "OFF" position. The control is broken by an internal cutoff switch. Means for emergency manual operation is provided.

Motor operators are available with motors rated 120 volts Ac, 208 volts Ac, and 240 volts Ac.

The 480 volt operators utilize a 120 volt Ac motor in conjunction with a 480/240 to 120 volt dual voltage transformer. (On LA and larger operators, the transformer is supplied for separate mounting by the customer.)

**Note:** The motor operator is intended only for infrequent operation in line with Underwriters Laboratories, Inc. endurance standard for AB molded case breakers.

For FB Tri-Pac/FCL Breakers

For LA Tri-Pac Breakers

For NB Tri-Pac Breakers

For PB Tri-Pac Breakers

PB Tri-Pac	Reversing	-	20	12	11	-	-	-	10 Cycles

① Ac voltage rated operators are UL listed as recognized components.

② The pilot device must be maintained contact type for FB Tri-Pac, FCL, mechanisms; momentary contact type for all others.

**Drawout Frame**

These drawout frames are for use with standard 3-pole Cutler-Hammer molded case circuit breakers. They consist of two separate parts; stationary mounting frame and movable carrier frame. Slide rails are drawer-type, and a screw mechanism is used to engage or withdraw the movable carrier frame.

The drawout frames have three positions: connected, test and disconnected. The frames do not include a safety tripping interlock, or secondary contacts. These are optional items and may be ordered at additional cost.

Breakers mounted in the drawout frames can be equipped with standard breaker accessories including shunt trip, undervoltage release, auxiliary switch, alarm switch and motor operator.

**Secondary Contacts**

These are used to disconnect auxiliary circuits when attachments such as shunt trip or motor operator are used. Available in multiples of four contacts with a maximum of 32 contacts for the NB Tri-Pac. They must be factory mounted. Order by description as similar to stationary or moving frame and specify number of contacts required.

**Selection Data**

Breaker Type <sup>①</sup>	Stationary Mounting Frame Style Number	Movable Carrier Frame Style Number
NB Tri-Pac	2603D85G09	2608D34G12

**Standard Installation**

Order one stationary mounting frame and one movable carrier frame.

Order breakers without terminals or rear connectors.

Order any attachments desired (shunt trip, undervoltage release, etc.)

Order secondary contacts as required:

- A shunt trip, undervoltage release or alarm switch requires two contacts;
- A 1A-1B auxiliary switch requires three contacts;
- A motor operator requires a maximum of four contacts;
- Others as required.

**Racking Crank**

A special crank to engage or withdraw the moving portion of the drawout. A standard 1/2 inch hex socket with extension can be used for this purpose.

Style Number	765A767G01
--------------	------------

**Cell Switches Mounted on Drawout Frames, All Ratings**

Up to four switches can be provided. Order by description.

Each switch provides NO and NC contact that transfers before reaching the test position when being withdrawn, and after the test position when being racked in.

<sup>①</sup> Drawout for FB and LA Tri-Pac, FCL, and LCL Circuit Breakers are not available. PB Tri-Pac movable is available factory-installed only. Order by description.

**General Information**

Engine generator molded case circuit breakers are designed specifically for application on diesel engine powered standby generators where high interrupting circuit breakers are not required. The JG through NG breakers are equipped with a special trip unit, that includes standard thermal (overload) protection and special low magnetic pickup range (FG includes a fixed thermal/magnetic pickup). The standard thermal trip unit provides overload protection for conductors per the National Electric Code. The low magnetic pickup range is approximately two to five times the continuous rating and provides closer low level short circuit protection when applied on generators that have very low short circuit capacity. This combination allows the user to customize the breaker to the generator output.

**Catalog Numbering System**

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers.

FG breakers include both line and load side terminals.

JG, KG, LG, and NG breakers with "W" catalog number suffix do not include any terminals.

JG, KG, LG, and NG breakers without "W" catalog number suffix include both line and load terminals.

Contact Cutler-Hammer for additional ratings and internal/external accessories.

**Interrupting Capacity Ratings**

**UL 489 Interrupting Capacity Ratings**

Interrupting Capacity (Symmetrical Amperes)	
Volts Ac (50/60 Hz)	
240	18,000
480	14,000
600	10,000

**IEC 947-2 Interrupting Capacity Ratings**

Interrupting Capacity (Symmetrical Amperes)	
Volts Ac (50/60 Hz)	
220, 240	18,000/9,000
380, 415	14,000/7,000
660, 690	10,000/5,000

**Standards**

Engine generator molded case circuit breakers are designed to conform with the following standards:

- Underwriters Laboratories, Inc., Standard UL 489, Molded Case Circuit Breakers and Circuit Breaker Enclosures File E7819
- Canadian Standards Association Standard C22.2 No. 5, Service Entrance and Branch Circuit Breakers
- International Electrotechnical Commission Recommendations IEC 947-2, Circuit Breakers

Conformance with these standards satisfies most local and international codes, assuming user acceptability and simplified application.

**Circuit Breakers**

The following table lists FG through NG engine generator breakers with the maximum generator kVA and kW rating. Engine generator breakers

are applied at 115% of the generator full load current rating. The maximum kW rating is based on three-phase generators at 80% power factor.

Magnetic Pickup Range	Maximum Generator Rating 60 Hz						Engine Generator Breaker Catalog Number

Enclosures

Enclosure Description

Type 1 General Purpose

- Surface or Flush Mounting
- 15-1200 Ampere Range
- 600 Volts Ac, 500 Volts Dc

Type 1 enclosed breakers are designed for use in commercial buildings, apartment buildings and other areas where a general purpose enclosure is applicable. The breaker is front operable and is capable of being padlocked in either the On or Off position. Ratings through 1200 amperes are listed with Underwriters Laboratories, Inc. as approved for service entrance application. Both surface and flush mounted enclosures are available.

Type 3R Rainproof Surface Mounting

- Interchangeable Hubs (Through 400 Amperes)
- 15-1200 Ampere Range
- 600 Volts Ac, 500 Volts Dc

This general purpose outdoor service center employs a circuit breaker inside a weatherproof sheet steel breaker enclosure to serve as a main disconnect and protective device for feeder circuits. Ratings through 1200 amperes are listed by Underwriters Laboratories, Inc. as suitable for service entrance application.

Type 12 Dustproof Surface Mounting

- No Knockouts or Other Openings
- 15-1200 Ampere Range
- 600 Volts Ac, 500 Volts Dc

The Type 12 enclosure is designed in line with specifications for special industry application where unusually severe conditions involving oil, coolant, dust and other foreign materials exist in the operating atmosphere. The handle padlocks in the Off position and the cover is interlocked with the handle mechanism to prevent opening the cover with the circuit breaker in the On position. Ratings through 1200 amperes are listed by Underwriters Laboratories, Inc. as suitable for service entrance application.

### General Information

UL listed dc molded case circuit breakers for use in general dc circuits and ungrounded battery supply circuits of UPS systems providing continuous, reliable ac power to computer controlled applications such as financial transactions and telecommunications.

For standard interrupting capacity 250 dc molded case circuit breakers. Refer to Index, Page 1, for appropriate Series C frame size.

The Series C dc breakers listed below use the same internal and external accessories as the standard Series C breaker. NBDC and PBDC use same internal and external accessories as standard NB and PB breakers.

Molded case circuit breakers for transportation application requiring 750 Vdc are available 15 through 2500 ampere 20 kA interrupting capacity at 750 Vdc. Breakers require 4 poles in series for 750 Vdc application. However, 750V is not a UL rating. For 750 Vdc application refer to Cutler-Hammer for ordering information. Dimensions are the same as the standard thermal-magnetic equivalent.

### Interrupting Capacity Ratings

## Type GFM

## Type GFM

Type GFM Ground Fault Protection Device

## Description

Cutler-Hammer Type GFM devices are Class 1 Ground Fault Sensing and Relaying devices designed to comply with the requirements outlined in Underwriters Laboratories, Inc. Standards for Safety entitled: Ground Fault Sensing and Relaying Equipment, UL1053.

Type GFM devices, when properly installed on a grounded electrical distribution system, will sense phase to ground fault currents and cause a disconnect to open and clear the fault instantaneously at predetermined current values. These devices have a maximum voltage rating of 600V, 50/60 Hertz and may be applied in accordance with Article 230-95 of the National Electrical Code.

Type GFM Ground Fault Protective Devices are self-contained combination sensing and relaying devices designed primarily for application on motor circuits and fixed loads where low-level Ground Fault Equipment Protection is required.

GFM devices are available in two basic types with each type having two physical sizes. The two basic types differ in the type of output circuit provided. The first type,

designated either GFM2 or GFM4, employs an internal relay having S.P.D.T. contacts that will operate a remote shunt trip device where control power is available.

The second type, designated either GFM2A or GFM4A, is completely solid state with an output SCR circuit designed to operate a remote, low-energy, flux transfer shunt trip mounted in a molded case breaker. No supplementary control power for the shunt trip is required.

## Size Selection

The proper size selection is a function of the conductor size of the equipment being protected. Types GFM2/GFM2A have approximately a two-inch window opening. Types GFM4/GFM4A have approximately a four-inch window opening.

## Rating Selection

The basic Ground Fault Current Pickup rating of either type GFM device is 5 amperes, i.e., each unit when properly installed will initiate a trip signal to a remote shunt trip with the presence of a 5 ampere Ground Fault Current within established tolerance limits. Separate optional rating plugs are available to alter the pickup rating to a maximum of 100 amperes.

## Control Power

Internal control power is not required to operate Type GFM Ground Fault Protective devices. All internal control power required is derived from the Ground Fault current through the internal current sensor.

External control power is required to operate the remote shunt trips used in conjunction with Type GFM2 and GFM4 devices.

External control power is not required with Type GFM2A and GFM4A devices to operate the special remote, low-energy, flux transfer shunt trips used in molded case circuit breakers.

## Trip Indication/Reset

A combination visual indicator and reset button is provided on the top of Type GFM2 and GFM4 devices to indicate the initiation of a tripping action to clear a Ground Fault. The operation of the internal relay will cause the white button to visibly raise.

To reset the device, the Indicator/Reset button must be depressed. Failure to reset the device will not allow the associated disconnect device to be reclosed.

No Indicator/Reset button is provided on Types GFM2A or GFM4A since an internal SCR is used in the output circuit. These devices reset automatically when the disconnect opens to clear the Ground Fault.

## Application

Type GFM devices may be installed in Zero Sequence or Ground Return Sensing methods, Proper Ground Fault Protection schemes are dependent upon proper system installation and grounding methods.

## Mounting

Each Type GFM device contains a Ground Fault Sensor which is a special current transformer. These are insulated devices which can be mounted directly to enclosure surfaces. Four tubular rivets secure the sensor housing. These four (0.200 dia.) mounting holes can be used to mount the GFM device in either a vertical or horizontal mounting position.

Optional mounting brackets as shown on the next page are available. These brackets may be mounted on either the bottom or side depending upon the installation requirements.

Regardless of the mounting method used, the top of the device with the visual indicator/ reset button and nameplate instructions should be maintained in a visual position after installation. GFM devices should be installed so that all conductors passing through the conductor window are physically centered.

## Type GFM

### Ordering Information

Order by catalog number or style number:

- 1 Basic GFM Unit
- 1 Rating plug if required
- 1 Mounting bracket if required
- 1 Circuit breaker with standard shunt trip factory installed (as required), or optionally when possible, a circuit breaker and field mountable shunt trip as separate items.

### Rating Plug Installation

To install an optional rating plug to obtain other than the minimum 5 ampere rating, remove the terminal cover held in position by a single screw and retention groove. With the cover removed, insert the rating plug in the position indicated. The rating plug is held captive in position with the addition of the terminal cover after the wiring is completed. With the terminal cover in position, the ampere rating of the rating plug remains visible.

### Output Circuitry

Contact ratings for Type GFM2 and GFM4 are 10 amperes continuous, 240 volts Ac maximum. Types GFM2A and GFM4A are intended to be used only with remote flux transfer shunt trips.

Type GFR

Type GFR

Description

The GFR ground fault relays, current sensors, test panels and accessory devices are UL listed by Underwriters Laboratories, Inc. in accordance with their standard for Ground Fault Sensing and Relaying Equipment, UL 1053, under File E48381.①

A Type GFR ground fault protection system, when properly installed on a grounded electrical system, will sense phase-to-ground fault currents. When the level of fault current is in excess of the pre-selected current pickup and time delay settings, the GFR relay will initiate a trip action of a disconnect device, which will open the faulted circuit and clear the fault.

The GFR devices are UL Class I devices designed to protect electrical equipment against extensive damage from arcing ground faults.

A basic Type GFR ground fault protection system consists of a ground fault relay②, a ground fault current sensor and a disconnect device equipped with a shunt trip device. This disconnect device can be a molded case circuit breaker, a power circuit breaker, a bolted pressure switch or other fusible disconnect device, suitable for application with UL Class I Ground Fault Sensing and Relaying equipment.

Additional optional equipment can be added to the protection system to meet the requirements of the specifying engineer, including:

- Ground Fault Test Panel
- Ground Fault Warning Indicator Relay
- Ground Fault Indicating Ammeter

GFR relays are available with zone selective interlocking circuitry to interlock several relays within the same system. This allows the relay which detects a ground fault to

① Suitable for either surface or semi-flush mounting.  
② These devices are also listed with CSA under their file number 43357.

GFR Relay

instantly clear the fault by tripping the disconnect device. The relay simultaneously sends a signal to relay units "upstream" from the fault to time delay or to block their operation completely. Current sensors in various designs provide a range of "window" sizes to accommodate standard bus and cable arrangements.

Shunt trip attachments may be ordered for field mounting in Cutler-Hammer molded case circuit breakers, or may be ordered factory installed in the breaker.

Electrical Ratings

GFR Relay

Ground Fault Detection Ranges:  
1 to 12, 5 to 60 or 100 to 1200 Amperes

Output contacts:

240 Volt, 50/60 Hz: 3.0 Amperes  
120 Volt, 50/60 Hz: 6.0 Amperes  
28 Volt Dc: 3.0 Amperes  
125 Volt Dc: .5 Amperes

Control power requirements:

120 Volt, 50/60 Hz: .125 Amperes, or  
125 Volt Dc (optional)

Typical Current Sensor

Sensor:

600 Volts, 50/60 Hz maximum system voltage

Type GFR

Ordering Information

Each installation requires:

1. One relay unit (select trip ampere as required)
2. One current sensor (select configuration required)
3. One circuit breaker or disconnect device with shunt trip, or a shunt trip attachment for mounting in existing breaker.
4. Test panel. (Optional)

Accessories

Test Panel (120 Volts Ac)<sup>③</sup>

Used to test the ground fault system, to give an indication the relay has tripped the breaker, and to reset the relay after tripping<sup>④</sup>. These functions may be separately mounted pilot devices.

Optional Test Panel

Control	Test	Catalog Number
120V 50/60 Hz	120V 50/60 Hz	GFRTP
125V Dc	120V 50/60 Hz	GFRTPD

Ground Fault Warning Indicator

This is an accessory item for use with GFR Relays with interlocking circuitry. At approximately 30-50% of the Relay pickup setting, the indicator switches separate 120 volt Ac control power to a lamp or relay, (not included) to give an indication of a ground fault. The indicator is rated 110/120 volts Ac 50/60 Hz for a maximum indicator load of .5 amperes.

Ground Fault Warning Indicator	Style Number
Manual Reset	1234C67G01
Self-Resetting	1234C67G02

Indicating Ammeter<sup>④</sup>

The optional indicating ammeter. It connects to the sensor terminals, through a momentary contact pushbutton, and will indicate (in amperes) any ground fault current flowing through the sensor. Kit includes the ammeter and pushbutton.

GFR System Used with	Kit Style Number
1-12 Ampere	752B820G01
5-60 Ampere	752B820G02
100-1200 Ampere	752B820G03

Shunt Trip Attachments

Use 120 volt Ac shunt trips.

Face Plate

Recommended when these relays are semi-flush mounted, to close the door cutout opening.

Description	Style Number
Face Plate	752B410G01

① Suitable for either surface or semi-flush mounting.  
 ② One end removable for installation.  
 ③ When a mechanically reset relay is used with a test panel, both the relay and test panel must be reset following either a simulated ground fault test or actual ground fault.  
 ④ Not UL listed.

Alarm Switch

Alarm Switch

General Information

For remote indication of automatic trip operation. Does not function with manual switching; however, it will operate when either a shunt trip or undervoltage release is operated.

A “make” contact closes and a “break” contact opens when the alarm/lockout switch operates. The switch automatically resets when the circuit breaker is reset.

① F-Frame circuit breakers are factory sealed. Underwriters Laboratories, Inc., requires that internal accessories be installed at the factory. Internal accessories are UL listed for factory installation under E7819. Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.  
 ② Includes 24-inch external pigtail leads, 18 AWG (16-.010).  
 ③ A maximum of two internal accessories may be mounted in a three-pole circuit breaker.

④ Suitable for mounting in right pole only of 2- or 3-pole breaker.  
 ⑤ Endurance: 6000 electrical operations plus 4000 mechanical operations.  
 ⑥ Endurance: 6000 electrical operations plus 2000 mechanical operations.  
 ⑦ Non-inductive load.  
 ⑧ Inductive (L/R = 0.026).  
 ⑨ Not listed with Underwriters Laboratories, Inc., for field installation.  
 ⑩ Standard pigtail lead exit location.  
 ⑪ Standard mounting location.  
 ⑫ Factory installation only. Leads exit load end of circuit breaker.

- ① Endurance – 3000 electrical operations plus 1000 mechanical operations.
- ② Non-inductive load.
- ③ Listed with Underwriters Laboratories, Inc. for field installation under E64983.
- ④ Standard mounting location – leads exit rear of breaker.
- ⑤ Endurance: 500 electrical operations plus 2500 mechanical operations.
- ⑥ Pigtail wire size: No. 18 AWG (0.82 mm<sup>2</sup>). Leads are red, black and blue.
- ⑦ A maximum of three ASL plug-in modules may be installed in a circuit breaker.

## Auxiliary Switch

### Auxiliary Switch

### General Information

The auxiliary switch provides circuit breaker contact status information by monitoring the position of the molded cross bar which contains the moving contact arms. The auxiliary switch is used for remote indication and interlock system verification,

and consists of one or two SPDT switches housed in a plug-in module. Each SPDT switch has one "a" and one "b" contact. When the circuit breaker contacts are open, the "a" contact is open and the "b" contact is closed.

① Includes 24-inch external pigtail leads, #18 AWG (16-.010).

② A maximum of two internal accessories may be mounted in a three-pole circuit breaker.

③ Suitable for mounting in right pole only of 2- or 3-pole breaker.

④ Endurance: 6000 electrical operations plus 4000 mechanical operations.

⑤ Pigtail wire size: No. 18 AWG (0.82 mm<sup>2</sup>).

⑥ For use in electronic circuit of 100 micro-amperes and 15 Vdc minimum.

⑦ Non-inductive load.

⑧ Not listed with Underwriters Laboratories, Inc., for field installation.

⑨ Standard pigtail lead exit location.

⑩ 125-volt (Max.), 50/60 Hz switch for use in electronic circuit of 100 micro-amp and 15 Vdc minimum.

⑪ Listed with Underwriters Laboratories, Inc. for field installation or interchangeable trip unit breakers under E64983.

⑫ Standard mounting location – leads exit rear of breaker.

⑬ Not for use on 4-pole circuit breakers.

Auxiliary Switch and Alarm Switch Combination

Auxiliary Switch and Alarm Switch Combination

General Information

Each catalog number listed in the following table includes one auxiliary switch and one alarm switch. In an auxiliary switch ASL switch

combination, the auxiliary switch is always mounted on the side of the plug-in module next to the center pole of the circuit breaker.

Shunt Trip

Shunt Trip

General Information

The shunt trip provides remote controlled tripping of the circuit breaker. The shunt trip consists of an intermittent rated solenoid with a tripping plunger and a cutoff switch assembled to a plug-in module.

When required for ground fault protection applications, certain Ac rated shunt trips, as noted in the Electrical Rating Table, are suitable for operation at 55 percent of rated voltage.

Ordering Information

Select shunt trip catalog number for the voltage within the indicated voltage range. Shunt trip coils are designed to be applied at specific Ac or Dc voltages within the voltage range shown. Electrical ratings are also shown on applicable circuit breaker accessory nameplates.

G-Frame

Shunt Trip (LH 3-Pole only)

- ① Approximate unlatching time of 6 milliseconds.
- ② Average circuit breaker contact total opening time approximately 62 milliseconds, at rated voltage.
- ③ Endurance – 500 electrical operations and 2500 mechanical operations.
- ④ Shunt trip can be operated up to a maximum of six times per minute.
- ⑤ Maximum operating voltage – 110% of maximum voltage range rating.
- ⑥ Pigtail wire size – No. 18 AWG (0.82 mm<sup>2</sup>). Leads are yellow and white.
- ⑦ Suitable for use with Class 1 GFP devices; marking label supplied with accessory kit.
- ⑧ Listed with Underwriters Laboratories, Inc. for field installation under E64983.
- ⑨ A maximum of two shunt trip plug-in modules may be installed in a circuit breaker.

Low Energy Shunt Trip

Low Energy Shunt Trip

General Information

Low energy shunt trip devices are designed to operate from low energy output signals from dedicated current sensors typically applied in ground fault protection schemes. However, with a proper control voltage source, they may be applied in place of conventional trip devices for special applications. Flux paths surrounding permanent magnets used in the shunt trip assembly hold a charged spring poised in readiness to operate the circuit breaker trip mechanism. When a 100

microfarad capacitor charged to 28 Vdc is discharged through the shunt trip coil, the resultant flux opposes the permanent magnet flux field, which releases the stored energy in the spring to trip the circuit breaker. As the circuit breaker resets, the shunt trip reset arm is actuated by the circuit breaker handle, resetting the shunt trip. The plug-in module is mounted in retaining slots in the top of the trip unit. Coil is intermittent-rated only. Cutoff provisions required in control circuit.

Ordering Information

Select shunt trip catalog number for the voltage within the indicated voltage range. Shunt trip coils are designed to be applied at specific Ac or Dc voltages within the voltage range shown. Electrical ratings are also shown on applicable circuit breaker accessory nameplates.

① Cutoff provisions required in control circuit.

② Listed with Underwriters Laboratories, Inc. for field installation under E64983.

③ Standard mounting location – leads exit rear of breaker.

④ For use with thermal-magnetic trip units only.

Undervoltage Release Mechanism

Undervoltage Release Mechanism

General Information

The undervoltage release mechanism monitors a voltage (typically a line voltage) and trips the circuit breaker when the voltage falls to between 70 and 35 percent of the solenoid coil rating.

The undervoltage release mechanism consists of a continuous rated solenoid with a plunger and tripping lever mounted in a plug-in module. The tab on the tripping lever resets the undervoltage release mechanism

when normal voltage has been restored and the circuit breaker handle is moved to the reset (or OFF) position. With less than pickup voltage applied to the undervoltage release mechanism, the circuit breaker contacts will not touch when a closing operation is attempted.

**Note:** Undervoltage release mechanism accessories are not designed for, and should not be used as, circuit interlocks.

Ordering Information

Select handle reset undervoltage release mechanism catalog number for the voltage within the indicated voltage range. Undervoltage release mechanism coils are designed to be applied at specific Ac or Dc voltages within the voltage range shown. Electrical ratings are shown on applicable circuit breaker accessory nameplates.

Instruction Leaflet/FRED Number 15553

**Note:** G-frame circuit breakers are factory sealed. Underwriters Laboratories, Inc., requires that internal accessories be installed at the factory.

Internal accessories are UL listed for factory installation under E7819.

Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

- ① Includes 24 inch external pigtail leads, #18 AWG (16-.010).
- ② A maximum of two internal accessories may be mounted in a three-pole circuit breaker.
- ③ Suitable for mounting in left pole only of 3-pole breaker.

Instruction Leaflet/FRED Number 29C160 and 29C179 (HMCP)

① Endurance: 6000 electrical operations plus 4000 mechanical operations.

② Not listed with Underwriters Laboratories, Inc., for field installation.

③ Standard pigtail lead exit location.

④ Standard mounting location.

⑤ Not for use on right pole of 4-pole circuit breaker.

## Accessory Terminal Block/Cutler-Hammer PowerNet Communications Kit (OPTIM 550 only)

### Accessory Terminal Block (R-Frame)

(For Fixed Mounted Configuration)

#### General Information

Internal accessory wiring leads are normally supplied with pigtail leads (No. 18 AWG) that exit from the right side of the circuit breaker. Where specified, fixed mounted accessory terminal blocks are available. A maximum of one 24-point terminal block can be installed on the right side of the circuit breaker for the internal accessories.

For convenience in determining the appropriate number of terminal block points required, refer to table at right.

## Cutler-Hammer PowerNet Communications Kit (OPTIM 550 only) K-, L-, and N-Frames

#### General Information

The Cutler-Hammer PowerNet Communications Kit can be ordered to add Cutler-Hammer PowerNet communications to an existing OPTIM 550 breaker in the field. An 18-inch wiring pigtail is routed to the rear of the breaker: two wires for Cutler-Hammer PowerNet and two wires for 24V Dc (45 mA load). It is recommended that the power supply be an "isolated high quality" unit.

<sup>①</sup> One 24-point accessory terminal block provided with circuit breaker when ordered factory installed or shipped from warehouse as separate item when ordered for field installation. See Digitrip RMS master connection diagram (IL 29C714).

**Endcap Kit**

The endcap kit slides onto the line or load conductor of the circuit breaker and acts as a threaded adapter for the conductor to accept a ring terminal or other bolt-on connector. The endcap kit is available with English and metric thread sizes. Screws and washers are supplied by customer. (Field installation only.) Listed per UL File E7819.

## Multi-Wire Connectors

Field-installed multi-wire connectors for the load side (OFF) end terminals. They are used to distribute the load from the circuit breaker to multiple devices without the use of separate distribution terminal blocks.

Multi-wire lug kits include mounting hardware, insulators and tin-plated aluminum connectors to replace three mechanical load lugs. UL listed for copper only as used on the load side (OFF) end.

Drawout Cassette

Drawout Cassette

The drawout cassette is currently for use with the standard 3-pole 65 kA/480 Vac, 1600A and 2000A RD circuit breakers only. It consists of two separate components: the movable mechanism which is factory mounted to the circuit breaker frame (shown in figure) and the stationary mechanism which is housed in the cassette and shipped separately.

The drawout mechanism has four positions.

- Connected – The breaker is fully connected to the primary stabs and secondary contacts.
- Test – The breaker is not connected to the primary stab but is connected to the secondary contacts.
- Disconnected – Both the primary stabs and the secondary contacts are disconnected.
- Withdraw – The breaker can be removed from the cassette.

**Termination Hardware**
**Terminal End Covers**
**F-Frame**

The terminal end covers are designed for use in motor control center applications where, because of confined spaces, line side conductors are normally custom fitted. The molded end covers are made of high dielectric glass-polyester and slide over the line ends of the circuit breaker. Close fitting conductor openings are molded into the end covers. The end cover and circuit breaker case fit together to form terminal compartments that isolate discharged ionizing gases during circuit breaker tripping. Terminal end covers are available with two conductor opening diameters, 0.25 and 0.41 inch, and are listed per UL File E7819. (Field installation only.)

**Ordering Information**

The terminal end cover is available for 3-pole circuit breakers only. Two conductor opening sizes are available. Specify quantity (one per circuit breaker) when ordering.

Conductor Opening Diameter (Inches)	Catalog Number
0.25 (6.35 mm)	<b>TEC1</b>
0.41 (10.41 mm)	<b>TEC2</b>

**Interphase Barriers**

The interphase barriers provide additional electrical clearance between circuit breaker poles for special termination applications. The barriers are high dielectric insulating plates that are installed in the molded slots between the terminals. (Field installation only.) Two per package.

Handle Locking and Blocking Devices

Padlockable Handle Lock Hasp

The padlockable handle lock hasp allows the handle to be locked in the ON or OFF position. (Trip-free operation allows the circuit breaker to trip when the handle lock holds the circuit breaker handle in the ON position.) The hasp mounts on the circuit breaker cover within the trimline. The cover is predrilled on both sides of the operating handle so that the hasp can be mounted on either side of the handle. The hasp will accommodate up to three padlocks with 1/4-inch (6 mm) shackles. Listed per UL File E7819. (Field installation only.)

The padlockable handle lock can be mounted on either side of the operating handle. One per circuit breaker. (Field installation only.)

① For padlockable handle lock hasp to padlock handle in OFF position only order either catalog number.

## Mechanical Interlocking Devices

### Key Interlock Kit (Lock Not Included)

The key interlock is used to externally lock the circuit breaker handle in the OFF position. When the key interlock is locked, an extended deadbolt blocks movement of the circuit breaker handle. Uniquely coded keys are removable only with the deadbolt extended. Each coded key controls a group of circuit breakers for a given specific customer installation.

The key interlock assembly is Underwriters Laboratories, Inc., listed for field installation under UL file E7819 and consists of a mounting kit and a purchaser supplied deadbolt lock. The mounting kit comprises a mounting plate, which is secured to the circuit breaker cover in either the left- or right-pole position, key interlock mounting screws, and a wire seal. Specific mounting kits are required for individual key interlock types.

### Ordering Information

Key interlock mounting kits are for field installation only. Select mounting kit catalog numbers to match type of lock used. Key interlocks are supplied by customer.

Mechanical Interlocking Devices

**Sliding Bar Interlock**

The sliding bar interlock provides mechanical interlocking between two adjacent 3-pole circuit breakers. It is installed on the enclosure cover between the circuit breakers. When the sliding bar interlock handle is moved from one side to the other, a bar extends to alternately block movement of the circuit breaker handles and prevents both circuit breakers from being switched to ON at the same time. Sliding bar interlocks are not UL listed. (Field installation only.)

**Ordering Information**

The sliding bar interlock is available for mounting between two adjacent 3-pole circuit breakers with circuit breakers centerline spacing as indicated in table and enclosure front panel thickness of 1/8 or 3/16 inch. (For field installation only.)

Frame	Centerline Spacing (inches)	Catalog Number	Instruction Leaflet/FRED Number

L, M	8-1/2	<b>SBK4</b>	29C311
N	8-1/2	<b>SBK5</b>	46A8396

**Walking Beam Interlock**

The walking beam interlock provides mechanical interlocking between two adjacent circuit breakers of the same pole configuration. The walking beam interlock mounts on a bracket behind and between the circuit breakers. A plunger on each end of the beam is inserted through an access hole in the back plate and base of each circuit breaker. The walking beam interlock prevents both circuit breakers from being switched ON at the same time. If a walking beam interlock is installed, the wiring troughs in the back of the circuit breaker case are blocked by the plungers and cannot be used for cross wiring. Factory modified circuit breakers are required for this application. UL File E3816.

**Ordering Information**

The walking beam interlock is available for mounting between two adjacent circuit breakers spaced 1/4-inch apart and having the same pole configuration. The two circuit breakers must be factory modified to accept the walking beam interlock assembly (suitable for use with either 2-, 3-, or 4-pole circuit breakers). With properly modified circuit breakers, the walking beam interlock is suitable for field installation. Order circuit breakers specifying modification for walking beam and select walking beam interlock from table on this page. Circuit breakers and walking beam interlock are boxed and shipped separately.

## Electrical Operator

### Electrical Operator<sup>①</sup>

The electrical (solenoid) operator is a single solenoid mechanism that enables local and remote circuit breaker ON, OFF, and reset switching. The electrical operator is mounted on the circuit breaker cover within the trimline of the circuit breaker. The electrical operator uses a unique bistable latch that allows the device to operate using one solenoid. The accessory provides high-speed switching with a maximum operating time of 5 cycles (80 ms) making it suitable for generator synchronizing applications.

Means are provided for remote electrical operation and for local manual operation. A special slide includes provisions for padlocking the circuit breaker handle in the OFF position. The slide will accept three padlock shackles with a maximum diameter of 1/4-inch (6 mm) each. An interlock electrically disconnects the solenoid when the electrical operator cover is removed. The above table provides electrical rating data for the electrical (solenoid) operator.

The electrical (solenoid) operator is Underwriters Laboratories, Inc., listed as a circuit breaker accessory under UL File E64983.

- ① The electrical operator design is endurance tested for 10,000 electrical operations.
- ② Use current-limiting type fuse where required.
- ③ Tolerance: +10%, -15% of nominal voltage.
- ④ Tolerance: ±10% of nominal voltage.
- ⑤ Underwriters laboratories listed under UL file E64983.
- ⑥ The electrical operator design has been endurance tested for 6,000 electrical operations.
- ⑦ Frequency: 50/60 Hz.
- ⑧ Maximum operating time: 5 cycles (80 ms).

Electrical Operator

The motor operator allows the circuit's breaker to be opened, closed, or reset remotely. It also has a lock-off capability and provisions for manual operation.

The motor operator contains a reversible motor connected to a ball screw. The ball screw drives the circuit breaker handle. Limit switches and relays are used to control the motor.

The motor operator is UL listed as a recognized component suitable for field installation on all type L-frame circuit breakers and molded case switches under UL File E64124.

From the point of energization of the closing mechanism at 85% voltage, the closing time is 30 cycles ± 10%.

- ① Underwriters Laboratories Inc. listed under UL File E64983.
- ② The electrical operator design has been endurance tested for 6,000 electrical operations.
- ③ Frequency: 50/60 Hz.
- ④ Maximum operating time: 5 cycles (80 ms).
- ⑤ Tolerance: +10%, -15% of nominal voltage.
- ⑥ The electrical operator design has been endurance tested for 2,500 electrical operations.
- ⑦ Maximum operating time: 12 cycles max. Operator is an intermittent duty device. The safe duty cycle (OFF to ON to OFF) should not exceed one per minute.

- ⑧ Operator is an intermittent duty service. The safe duty cycle (OFF to ON to OFF) should not exceed one per minute.
- ⑨ Electric Operating time at rated voltage; (a) To turn breaker ON - 1/2 second max. (b) To turn breaker OFF - 1/2 second max.
- ⑩ Motor operating temperature; Class "A" temperature limits apply.
- ⑪ A minimum 1 kVA power source is recommended for motor operation.
- ⑫ Applied voltage should be no less than 85% or no more than 110% of rated.

## Plug-in Adapters

### Plug-in Adapters

Plug-in adapters simplify installation and front removal of circuit breakers. Individual line and load plug-in adapters are available for rear connection applications on 2-, 3-, and 4-pole circuit breakers. Common mounting plates for line- and load-end adapters are available.

② Use 3-pole mounting plate for 2-pole circuit breaker.

Rear Connecting Studs

Rear Connecting Studs

Rear connecting studs are available in several sizes to accommodate specific fixed-mounted circuit breaker applications.

Each rear connecting stud assembly consists of one stud and one tube. To maintain proper clearances between poles, select alternate long and short stud assemblies for circuit breakers with more than one pole. One assembly is required for line-end and one for load-end of each pole. Tubes must be ordered separately. Connecting studs are available only with English thread sizes.

Panelboard Connecting Straps

Panelboard Connecting Straps

Panelboard connecting straps are used to connect the circuit breaker terminals to the panelboard bus. The panelboard connecting straps are available with various ratings for outside and center poles. (Field installation only.)

Ordering Information

Panelboard connecting straps are available to meet the needs of most standard panelboard applications. Style numbers for mounting brackets for CDP panelboard installations are also included.

Refer to panelboard manufacturer for compatibility.

## Handle Mechanisms

### Flange Mounted Flex Shaft™

The Flex Shaft type handle mechanism is an extra heavy-duty handle mechanism designed for mounting in flange-type enclosures. An operating handle, flexible shaft, and mechanism are required for standard application.

The handle can be locked in the RESET position with up to three padlocks. The handle is suitable for Types 1, 3R, 4<sup>①</sup>, 4X<sup>①</sup>, and 12 fabricated enclosures. The handle fits the industry standard cutout.

Eight lengths of shafts are available for use with the wide range of depths of various enclosures (3 feet through 10 feet). These choices enable this mechanism to be mounted in various depth, width, and height enclosures.

**Note:** when selecting the length of shaft, ensure minimum bending radius of 4 inches is maintained to operate properly.

The standard method of shipment includes the mechanism preset at the factory; however, minor field adjustments may be required.

For this publication, the term Circuit Breaker shall also include the molded case switch and Series C motor circuit protector (HMCP).

UL File E64893.

① Type 4/4X handle mechanisms are available. Add suffix X to complete catalog number.

② Add suffix I to complete catalog number for IEC handle. Add suffix L to complete catalog number for 6-inch handle.

### Ordering Information

Catalog Number includes complete assembly consisting of C371 handle, flexible shaft, operating mechanism, and door interlock hardware to fit industry standard flange cutout.

Handle Mechanisms

Flange Mounted  
Type SM Safety

The SM safety handle mechanism provides a means of externally operating a circuit breaker mounted in an enclosure and is designed to reduce the possibility of circuit breaker tampering. The handle mechanism is especially suited for use in automotive and machine tool industries through its conformance to Type 12 and J. I. C. requirements. A specially modified handle mechanism for Type 4 enclosure application is also available order by description. The handle mechanism will accept up to three padlock shackles, each with a maximum diameter of 3/8 inch (9.52mm). UL File E64893.

① Width spacer kits cannot be used with short rod at minimum enclosure depth.

Through-the-Door  
Type MC Motor Control

The MC motor control handle mechanism is a linear-operating, fixed-depth mechanism designed for through-the-door mounting in standardized and shallow depth enclosures. The handle mechanism provides positive operation and direct disconnect status indication. It is interlocked with the enclosure door so that the door can be opened only when the handle is set to OFF. (A defeater, supplied with the handle mechanism, can be used to bypass the interlock for maintenance and inspection.) The handle mechanism will accept up to three padlock shackles, each with a maximum diameter of 3/8 inch (7.92 mm).UL File E56845.

**Handle Mechanisms**
**Through-the-Door Rotary**

These compact rotary handle mechanisms are especially designed for use with the GD/GC/GHC circuit protection devices. The Close-Coupled version is designed for mounting in a shallow enclosure, while the Vari-Depth is suitable for deep enclosures.

Both G-frame handle mechanisms are suitable for use on Type 1 enclosures. In addition, the Vari-Depth handle mechanism is offered for use with Types 3R, 12, and 4X enclosures.

The new handles are a compact, plastic, general purpose design which is easy to install. These mechanisms are commonly used where high volume, standardized enclosures are being fabricated.

The Close-Coupled design is available with or without a shroud. The handle is offered in two colors; black or yellow. An escutcheon ring and interlock clip are provided as standard. This standard design includes a lock-off feature.

The Vari-Depth design includes an operating mechanism, shaft, and external handle. The handle is available in two colors; black or yellow. An external lock-off is included in the handle design. The shaft may be cut to size to fit the enclosure.

UL and CSA listed.

Handle Mechanisms

Through-the-Door Rotary

The general purpose rotary handle mechanisms are suitable for use with Types 1, 3R, (4, 4X), and 12 fabricated enclosures. They are designed for use with Series C F-frame circuit breakers, molded case switches, and motor circuit protectors (HMCP).

Required for a standard application are the operating handle, shaft, and mechanism.

The operating handle has been designed to meet NFPA 79 requirements. It may be mounted in either the horizontal or the vertical direction. The handle was ergonomically designed with extra clearance for a "gloved hand" to operate. It may be padlocked in the OFF position utilizing 3 padlocks.

The standard label on the operating handle indicates ON/Tripped/OFF/Reset. UL File E64893

To meet the various enclosure depths, four variable depth shafts are offered (6-inch, 12-inch, 16-inch, and 24-inch). Each shaft includes a support brace to ensure proper alignment. In addition, the 16-inch and 24-inch extra long shafts include an adjustable support bracket.

The standard mechanism located on the breaker does include means for internally locking the breaker in the "OFF" position with up to three padlocks each with a maximum diameter of .312-inch.

Type 4/4X handles are similar to standard handles except they include an internal neoprene gasket. Type 4/4X handle style number is 6648C22G03. Due to gasketing effect between the handle and the housing, the handle may not indicate a tripped position.

Accessories

As an option, an auxiliary switch is offered so that the control panel builder may electrically indicate the status of the breaker. This accessory would be mounted on the mechanism and comes with 24-inch pigtail leads.

Style Number	5108A61G01
--------------	------------

Refer to CD-ROM, SA.74A.01.T.E, for replacement type Vari-depth and AMT handle mechanisms.

- ① Complete catalog number includes the standard handle, mechanism, shaft, and support brace/bracket.
- ② Handle is designed suitable for Types 1, 3R, and 12 enclosures. Use style number 6648C22G03 for Type 4/4X handle or add X suffix to complete catalog number.
- ③ The standard handle label indicates ON/Tripped/OFF/Reset.
- ④ Breaker mechanism includes a shaft support bracket and its parts.
- ⑤ Longer shafts (16-inch and 24-inch) include an adjustable support extension.
- ⑥ IEC Handle Mechanism supplied with Metric thread mounting hardware.
- ⑦ Complete Catalog Number includes a handle, mechanism and shaft.

Handle Mechanisms

Door Hardware

F-, J-, K-, L- and M-Frames

Door Hardware listed in this section may be used with Types SM and AMT handle mechanisms.

Three choices of door hardware and an auxiliary handle are offered to provide the best latching scheme for individual needs. The door hardware is designed with a provision for padlocking, and a coin-proof slot that requires the use of a tool to open the door.

Select desired hardware below. Additional latches can be ordered from accessories section if desired.

Hardware Item	Description and Catalog Number
	With sliding latches for smaller panels up to approx. 30-inch high.  Catalog Number Right Hand: <b>DH1R</b> Left Hand: <b>DH1L</b>  Instruction Leaflet/FRED Number 13327(L); 13326(R)
	With 2-roller latches for intermediate panels up to approx. 40-inch high.  Catalog Number Right Hand: <b>DH2R</b> Left Hand: <b>DH2L</b>  Instruction Leaflet/FRED Number 13325(L); 13324(R)
	With 3-roller latches for larger panels, approx. 40-inch and higher.  Catalog Number Right Hand: <b>DH3R</b> Left Hand: <b>DH3L</b>  Instruction Leaflet/FRED Number 13323(L); 13322(R)
	Auxiliary handle for larger panels.  Catalog Number Right Hand: <b>DH4R</b> Left Hand: <b>DH4L</b>

**Note:** Right-hand enclosure cover hinged on left, left-hand enclosure cover hinged on right.

Accessories

**Dress Nameplates:** Required to meet automotive specifications. Mounts from inside enclosure and covers operating mechanism mounting bolts; makes mechanism non-removable when enclosure door is closed.

Description	Style Number
Dress Nameplate	<b>373D260G05</b>

**Electrical Interlock Kit:** Provides 1 N.C. and 1 N.O. contacts (SPDT switch) for use with auxiliary circuits. Mounts to end of mechanism housing as shown.

Description	Style Number
Electrical Interlock Kit	<b>622B747G01</b>

**Auxiliary Latch Kits:** Provide an additional latch for use with applications where two point latching may not be adequate.

Sliding Latch

Rolling Latch

N	<b>HEX5</b>
R	<b>HEX6</b>

**Type LFD**

The LFD current limiter is an accessory that bolts to the load end of a standard FDB or FD thermal-magnetic circuit breaker, providing 200,000A interrupting capacity at up to 600 Vac. LFD current limiters for thermal-magnetic circuit breakers are listed with Underwriters Laboratories, Inc., under File E47239.

## Ground Fault Alarm Unit

The Ground Fault Alarm Unit is a remotely mounted device with a combination indicating light/test button that will light when the breaker trips or alarms on ground fault. The Ground Fault Alarm Unit requires a separate 120 Vac power source to power the light and the internal relay which has 1 N.O. and 1 N.C. contacts for remote indication. The Ground Fault Alarm Unit can be panel mounted for ordering with an optional face mounting bracket. For use on Digitrip 310 only. K- through N-frame.

## IQ Energy Sentinel

The IQ Energy Sentinel is a highly accurate, microprocessor-based, breaker-mounted device designed to

monitor power and energy readings. It represents an alternative to watt meters, watt-hour meters, and watt demand meters. Key advantages include savings in space, lower installation costs, and remote monitoring capability.

The IQ Energy Sentinel mounts on the load side of a Series C F-frame (150 ampere) circuit breaker. It can be applied on three-phase, four-wire systems, or single-phase, three-wire systems with voltage connected through phases A and C.

Instruction Leaflet/FRED Number 17437

For more information see Descriptive Bulletin 8178.

## Potential Transformer Module

The Potential Transformer Module is required for Series C, Digitrip OPTIM 1050, to provide a voltage input to allow the trip unit to monitor power and energy as well as power factor. The Potential Transformer Module is a 6 VA transformer with a primary voltage input of up to 600V line to line. Three 0.1 ampere fuses are provided on the primary of the transformer and can be used for isolation purposes during dielectric testing. The device is normally panel mounted and can feed up to 16 OPTIM trip units.

### Ordering Information

Instruction Leaflet/FRED Number 29C894 Diagram

## Solid-State (Electronic) Portable Test Kit

The solid-state (electronic) portable test kit provides verification of performance of all ratings of Digitrip 310 electronic trip units installed in Series C circuit breakers while in service under varying load and/or phase imbalance. The test kit operates on 120-volt, 50/60 Hz power; it includes complete instructions and test times for testing long time, short time/instantaneous operation and optional ground fault operation of the circuit breaker.

### Ordering Information

Solid-State (Electronic) Portable Test Kit	<b>STK2</b>

① Model 550 OPTIMs require the Cutler-Hammer PowerNet field upgrade kit.

OPTIM System Components

**Breaker Interface Module (BIM)**

The Breaker Interface Module (BIM) is a panel mounted user interface device that is mounted on the front of an electrical assembly or at a remote location. The BIM is used to access, configure, test and display information for OPTIM trip units and other devices. The BIM consists of four display windows, eight function buttons, 18 LEDs, and a graphical time/current curve to provide breaker status, operational information, protection status and energy monitoring. A 24 Vdc power supply is required to provide power to the BIM. This is supplied by the switchboard builder to Cutler-Hammer specifications. The BIM is a member of the Cutler-Hammer PowerNet family of communicating devices that connects OPTIM trip units, Digitrip RMS 810/910 trip units and energy sentinels as a subnetwork system. The BIM can also be connected to a main network via a PONI module to Cutler-Hammer PowerNet software.

**Ordering Information**

Catalog Number
<b>BIM</b>

Instruction Leaflet/FRED Number 29C893

**Digitrip OPTIMizer**

The Digitrip OPTIMizer is a handheld programmer that is used to access, configure, test and display information from OPTIM trip units. The OPTIMizer plugs into the front of an OPTIM trip unit via an eight-pin telephone jack and is powered by a nine-volt battery or the auxiliary power module. In addition, a three-pin INCOM network connection is also provided to program other OPTIM devices on the system. An Auxiliary Power Module connection provides a trip test when control power is not present at the breaker. The OPTIMizer is supplied as a standard package to include the programmer, the eight-pin connection cord, battery and carrying case. The Auxiliary Power Module is optional.

**Ordering Information**

Catalog Number
<b>OPTIMizer – Standard Package</b>

Instruction Leaflet/FRED Number 29C892

**Note: 24 Vdc Power Supply**

A 24 Vdc power supply is required for all Digitrip OPTIM trip units that are required to communicate either on the main Cutler-Hammer PowerNet network or as a subnetwork to a BIM. The breaker's load is 45 mA of current. Typically one power supply is required per switchboard and can provide control power to a BIM and the OPTIM trip units. The 24 Vdc power supply should be an "isolated high quality" power supply with a "CE" label, and is normally provided by the switchboard manufacturer to Cutler-Hammer recommendations.

① The OPTIMizer can work off of 32 Vdc control power, although 24 Vdc is the standard on OPTIM breakers.

② Model 550 OPTIMIS require the Cutler-Hammer PowerNet field upgrade kit.

**Auxiliary Power Module**

The Auxiliary Power Module is a power supply requiring 120 Vac input at 50 or 60 Hz that provides a 32 Vdc output<sup>①</sup>. The Auxiliary Power Module provides control power for testing an OPTIM trip unit when other means of control power is not available or for continuous OPTIMizer operation versus temporary with a battery. The Auxiliary Power Module connects into the top of the Digitrip OPTIMizer via a keyed receptacle. The main application for the Auxiliary Power Module would be for the testing of a stand-alone non-communicating OPTIM breaker that ordinarily would not have control power.

**Ordering Information**

Catalog Number
<b>PRTAAPM</b>

**Cutler-Hammer PowerNet Software**

Series C Digitrip OPTIM trip units can communicate back to a central Personal Computer by installing Cutler-Hammer PowerNet software<sup>②</sup>. In addition other software packages are available to allow the user to configure the trip units as well as monitor system performance.

Instruction Leaflet/FRED Number 29C890

## Special Calibration<sup>①</sup>

Special non-UL-listed calibrations are available for certain ambient temperatures other than 40°C and for frequencies other than 50/60 Hz or Dc. Reduced interrupting ratings will apply for 400 Hz applications. Maximum thermal calibration is limited to 135A at 400 Hz.

Suffix H01 400 Hz.

See Application Data 29-160 for information regarding special conditions.

## 50°C Calibration<sup>①</sup>

Add suffix "V" to catalog number for complete breaker, listed above, when ordering listed ampere ratings for breakers to be used in 50°C ambients.

## Moisture-Fungus Treatment

All Series C circuit breaker cases are molded from glass-polyester which does not support the growth of fungus. Any parts which are susceptible to the growth of fungus will require special treatment.

Suffix J01 Fungus Treated

## Freeze-Tested Circuit Breakers

The circuit breakers may be ordered with freeze testing. This option uses special lubrication and mechanical operation is verified at -40°C.

Suffix F01 Freeze Tested.

## Marine Applications

F-Frame circuit breakers can be supplied to meet the following marine specifications:

U.S. Coast Guard CFR 46 ABS –  
American Bureau of Shipping  
IEEE 45

These specifications generally require molded case circuit breakers to be supplied with 50°C ambient calibration, special nameplating, and plug-in adapter kits. When plug-in adapter kits are used, no terminals need be supplied.

Series C circuit breakers can also be supplied to meet UL489 Supplement SA (Marine Use) and UL489 Supplement SB (Naval Use).

UL489 Supplement SA applies to vessels over 65 feet in length. Requirements include 40°C ambient calibration, special labeling, and no use of aluminum conductors or terminals.

Suffix H08 "Marine."

UL489 Supplement SB requires 50°C ambient calibration, vibration testings, special nameplating and no use of aluminum conductors or terminals.

Suffix H09 "Naval."

<sup>①</sup> Not listed with Underwriters Laboratories, Inc.

<sup>②</sup> For use with standard 35 mm DIN rail such as, 35 x 7.5 or 15 mm per DIN EN50022.

**NEMA 1 General Purpose**

**Surface or Flush Mounting  
15-1200 Ampere Range  
600 Volts Ac, 500 Volts Dc**

NEMA 1 enclosed breakers are designed for indoor use in commercial buildings, apartment buildings and other areas where a general purpose enclosure is applicable. The breaker is front operable and is capable of being padlocked in the Off position. (Padlocking not available on enclosures for Quicklag® breakers.) Ratings through 1200 amperes are listed with Underwriters Laboratories, Inc. as suitable for service entrance application. Both surface and flush mounted enclosures are available. UL File Number E7819. CSA File Number LR84319.

**NEMA 3R Rainproof Surface Mounting**

**Interchangeable Hubs (through 400 amperes) 15-1200 Ampere Range  
600 Volts Ac, 500 Volts Dc**

This general purpose outdoor service center employs a circuit breaker inside a weatherproof sheet steel enclosure to serve as a main disconnect and protective device for feeder circuits. The operating handle can be padlocked in the Off position, and is interlocked to prevent the door from opening when the breaker is On. Ratings through 1200 amperes are listed by Underwriters Laboratories, Inc. as suitable for service entrance application. UL File Number E7819. CSA File Number LR84319.

**NEMA 4/4X, 5 Water and Dustproof**

**Stainless Steel – Type 304  
Surface Mounting  
15-1200 Ampere Range  
600 Volts Ac, 500 Volts Dc**

This enclosure meets NEMA 4/4X and 5 requirements for water and dustproof applications and has no knockouts or other openings. It is particularly well suited for use in dairies, borax mines, breweries, paper mills and other process industries. The operating handle can be padlocked in the Off position, and is interlocked to prevent the door from opening when the breaker is On. Ratings through 1200 amperes are Underwriters Laboratories, Inc. listed as suitable for service entrance application. UL File Number E7819. CSA File Number LR84319.

**NEMA 12 Dustproof Surface Mounting**

**No Knockouts or Other Openings  
15-1200 Ampere Range  
600 Volts Ac, 500 Volts Dc**

The Type 12 enclosure is designed in line with specifications for special industry application where unusually

severe conditions involving oil, coolant, dust and other foreign materials exist in the operating atmosphere. The handle padlocks in the Off position and the cover is interlocked with the handle mechanism to prevent opening the cover with the circuit breaker in the On position. Ratings through 1200 amperes are listed by Underwriters Laboratories, Inc. as suitable for service entrance application. A NEMA 12 semi-dust-tight design which includes knockouts is available. These units are rated 15-400 amperes, 600 volts Ac, 500 volts Dc. UL File Number E7819. CSA File Number LR84319.

**NEMA 7, 9 Hazardous Location**

**Cast Aluminum, Explosionproof  
Surface Mounting  
15-800 Ampere Range  
600 Volts Ac, 250 Volts Dc**

Hazardous location, Class I, Groups B (except XFDN050), C, D; Class II, Groups E, F, G. This special service cast aluminum enclosure is supplied with a wide, machined flanged cover to prevent igniting outside atmospheres by arcing from inside the enclosure. Front operable, the handle padlocks in the Off position. Enclosures rated 600 amperes and above have lift-off hinges for ease of assembly. UL and cUL File Number E71279.

**Diagram 1**

**Conduit Openings**  
Refer to outline dimensions for size and location of standard conduit openings. In addition, 1/2-inch openings are drilled and tapped for breather and drain. Unless ordered with breather and drain, these openings are plugged. Refer to Cutler-Hammer for list price of breather and drain.

	L-Frame	250
	M-Frame	400
	N-Frame	600
		1200

\* "N" in this position indicates enclosure complies with 1981 NEC gutter space requirement.

① Power cables must enter and leave from opposite ends (through feed).

## Standards

Series C<sup>®</sup> molded case circuit breakers are designed to conform with the following standards:

- Underwriters Laboratories, Inc., Standard UL 489, Molded Case Circuit Breakers and Circuit Breaker Enclosures
- National Electrical Manufacturers Association Standards Publication No. AB1-1993, Molded Case Circuit Breakers
- Australian Standard AS 2184, Molded Case Circuit Breakers
- British Standards Institution Standard BS 4752: Part 1, Switchgear and Control Gear Part 1: Circuit Breakers
- Canadian Standards Association Standard C22.2 No. 5, Service Entrance and Branch Circuit Breakers
- International Electrotechnical Commission Recommendations IEC 157-1, Circuit Breakers
- Japanese T-Mark Standard Molded Case Circuit Breakers
- South African Bureau of Standards, Standard SABS 156, Standard Specification for Molded Case Circuit Breakers
- Swiss Electro-Technical Association Standard SEV 157-1, Safety Regulations for Circuit Breakers
- Union Technique de l'Electricite Standard NF C 63-120, Low Voltage Switchgear and Control Gear Circuit Breaker Requirements
- Verband Deutscher Elektrotechniker (Association of German Electrical Engineers) Standard VDE 0660, Low Voltage Switchgear and Control Gear, Circuit Breakers

Conformance with these standards satisfies most local and international codes, assuming user acceptability and simplified application.

Series C molded case circuit breakers equal or exceed Federal Specification Classification W-C-375b requirements for the particular class associated with the circuit breaker frame being considered.

## Further Information

Circuit Breaker  
CD-ROM SA.74A.01.T.E

## Navigation Chart of CD-ROM

## System Requirements

- Processor: 486 or faster (Pentium® or Pentium Pro recommended)
- Operating System: Microsoft Windows 95, Windows 98, Windows NT 3.5, or Windows NT 4.0
- Memory: 8 MB of available RAM (16 MB recommended)
- Available Hard Disk Storage Space: 12 MB
- Devices: a CD-ROM drive and a mouse
- Monitor: minimum 640 x 480 resolution and 8-bit color (256 colors)

## Installation Instructions

- This is an autorun CD. Just insert this disk in the CD-ROM drive and wait for it to launch.

CD-ROM Installation Help Line: U.S.: 1-800-270-5134  
Outside of the United States: Contact your local Cutler-Hammer sales office.

If the CD is not included in this Product Guide, contact Cutler-Hammer Fulfillment Center at 1-800-957-7050 and ask for SA.74A.01.T.E.
