WP2500-3P	705591 85055 2	2500 LB	3000 Feet

Polyester Fiber Pull Tape is a flat, woven polyester tape used for pulling a variety of cable types through underground conduit. It is produced using high tensile, high tenacity, low shrink polyester fibers that distributes heat across a wide, flat profile. This is the most competitively priced high tensile strength pull tape.

Polyester Fiber Pull Tapes have not been found to experience any breakdown of fibers which would result in a loss of tensile strength while in water. This material has even been used in applications where the material was left inside underground conduit for several years prior to pulling.
